Fernandes. Offices: 6, Apollo Street, Bombay.

BOMBAY SARITARY ASSOCIATION.—Founded to create an educated public opinion with regard to sanitary matters in general; (b) to diffuse the knowledge of sanitation and hygiene generally, and of the prevention of the spread of disease amongst all classes of people by means of lectures, leasicts and practical demonstrations and, if possible, by holding classes and examinations; (c) to promote sanitary science by giving prizes, rewards or medals to those who may by diligent application add to our knowledge in sanitary science by original research or otherwise; (d) to arrange for homely talk or simple practical lectures for mothers and girls in the various localities and different chawls, provided the people in such localities or chawls give facilities. The Sanitary Institute Building in Princess Street, which has lately been built by the Association, at a cost of nearly Rs, 1,00,000 the foundation stone of which was laid by Lady Willingdon in March, 1914, and opened in March, 1915, is a large and handsome structure with a large Lecture Hall, Library, Museum, etc., and also provides accommodation for King George V. Anti-Tuberculosis League Dispensary transferred to the Municipality in 1924 and Museum and the office of the Assistant Health Officer, C and D Wards, and the Vaccination Station. Hon. Secretary: Dr. J. S. Nerurker, B. Sc., L. M. & S., D.F.H. (Cantab.), Executive Health Officer, Bombay.

BRITISH AND FOREIGN BIBLE SOCIETY.—Since 1811 the British and Foreign Bible Society has been at work in this country It has 6 Auxiliaries in India and an Agency in Burma. The first Auxiliary was established in Calcutta, in 1811, then followed the Bombay Auxiliary in 1813, the Madres Auxiliary in 1820, the North India Auxiliary in 1845, the Punjab Auxiliary in 1863, the Bangalore Auxiliary in 1875, while the Burma Agency was founded in 1899. The

Bible or some portion of it is now to be had in over 100 different Indian languages and dialects and the circulation throughout India and Burma reached 1,238,436 issues in 1933. The Bibles, Testaments, and Portions in the various vernaculars are sold at rates which the very poorest can pay, and at considerable loss to the Society. Grante of English Scriptures are made to Studentwho pass University examinations, as under:—

The New Testament and Psalms to Matriculates and the Bible to Graduates.

Portions of Scriptures in the important vernaculars have been prepared in raised type for the use of the Blind and large grants of money are annually given to the different Missions, to enable them to carry on Colportage and Bible Women's work. Besides the British and Foreign Bible Society, there is Bible work carried on in India, and Burma in a much smaller way by the Bible Translation Society—which is connected with the Baptist Missionary Society—the National Bible Society of Scotland, the American Bible Society and the Tranquebar Tamil Bible Society.

The following table shows the growth in the British & Foreign Bible Society's work during the past few years in India and Burma:—

INDIA SUNDAY SCHOOL UNION—The India Sunday School Union is an interdenominational organisation having for its object the strengthening of religious and moral education in the Christian schools throughout the Indian Empire. It has six full time workers, both Indian and European. It was founded in Allahabad in 1876. Its General Committee is composed of representatives from the National Christian Council, from the Provincial Representative Councils and from local Sunday School Unions which are Auxiliaries of the I.S.S.U.

The headquarters of the Union are at Coonoor on the Nilgiri Hills, where besides the office and well-stocked book shop, there is the St. Andrew Teacher Training Institution. In this institution Summer Schools are held where a short but intensive course of study and training is offered to leaders in religious education from all parts of India.

liesides the activities at headquarters, the Union offers courses of lectures in any part of the country, delivered by members of its staff. A Quarterly Journal is published in English, and Lesson Notes for teachers in English and several vernaculars. Text-books on subjects connected with the work of Bible teaching are also published in various languages, and Scripture examinations are organised.

The officers of the Union are as follows :-

President: The Hon. Sir David Devadass, Madras.

Treasurers: W. H. Warren, Madras, and J. G. Fritschi, Coonoor; General Secretary: E. A. Annett, Coonoor; Assistant Secretary: Rev. N. Franklin, Madras.

The most recent statistics show that there are in India 18,322 Sunday Schools with 30,428 teachers, and 707,204 scholars.

Road, Calcutta. Road, Calcutta.

POONA SEVA SADAN SOCIETY.—This Institution was started in 1909 by the late Mrs. Ramabar Ranade, Mr. G. K. Devadhar, and a few other ladies and gentlemen in Poona and registered in 1917. It is now working independently though for a few years in the beginning it was conducted as a branch of the Bombay Seva Sadan. Its main object is to make women self-reliant and to train them for mis-

sionary work undertaking educational and medical activities for their sisters and brethren, the former in backward areas especially and working on a non-sectarian basis. Nominal fees are now being charged for instruction in all classes. There are eight different departments sub-divided into 60 classes. Arrangements are made for training Nurses and Midwives and women Sub-Assistant Surgeons at the Sassoon Hospitals, Poona, and a hostel is maintained for the former and another for those attending the Sub-Assistant Surgeon's Classes. There is a Public Health School affiliated to the Lady Chelmsford League for Maternity and Child Welfare, Delhi, with a hostel. The number in these three hostels is now about 85. Besides, there is a tull-fledged Training College, named after Bai Motlibai Wadia with about 65 students excluding those in the V. F. Class for being trained as Mistresses for Vernacular schools. This College is probably the only college in India maintained by a non-official, non-Christian missionary body teaching the full course. The results of the Certificate Examinations held in the year 1931-32 under the authority of the local Government Training College for Women were as follows: 1 year senior B and Il year 7. The total number of certificates granted so far is 350 now. The Practising Schools for little guls attached to the Traming Schools for integers attended to the Framing College has now cleven classes with 290 students reading up to the Marathi VI Standard, English being taught in the V and VI standard classes, Primary Classes for grown up women teaching up to the Marathi V Standard are attended by about 100 women. It is here that poor women are recruited for then traming as a teacher, nuise, midwife, or doctor Special classes for teaching English, First Aid, Home Nummy were attended by about 90 students; the Music Classes by 30 students, and the Work-nom Classes for teaching Sewing, Embroidery, Hoslery, Composing, Weaving, etc., by 130 Women Thus, the total number of pupils is about 990 to-day. There are two branches of the Society started at Satara and Baramati which are named after Lady Vithaldas Thakersey, the wife of the greatest helper of the Society so far, the late Sir Vithaldas D. Thakersey. Besides there are branches started at Bombay (Dadai and Girgaum), Sholapur, Ahmedragar. Albag, Nasik, Nagpur, and Gwalior for either educational or medical work or for both Thus the total number of women and girls including about 150 duplications on the rolls at these various Centres of the Society is over 1.500 There are in Poona five hostels, three of which are located at the headquarters and the other two in the Somwar Peth for Nurses, etc., under training at the Sassoon Hospital The number of resident students is above 200 in these five hostels. One of the three hostels at the headquarters is intended for women of depressed classes. The number of these women at present is 8. In connection with the medical branch a Committee has been formed in England, which will enable the Society to send fully qualified Nurses there to undergo further training. Two fully qualified Nurses have so far been sent by the Society for their post graduate course in Public Health Nursing at Bedford College for women,

London, with the partial help of a scholarship of the League of Red Cross Society, Paris. There is an active Infant Welfare centre and ante-natal clinics with the average daily attendance of 50 excluding expectant mothers. The Society has extended its medical activities in Bombay by undertaking, with the help of two charitable Trusts in Bombay, to work out the scheme of Maternity, Infant Welfare, Child Welfare and General Nursing for the women and children of the Bhatta Community under the supervision of Mr. G. K.
Devadhar, the organiser of the society. This society was founded in London in scheme has a Maternity Hospital and Nursing 1754. Its recently published history by Sir scheme has a Maternity Hospital and Nursing Home, and three Infant Welfare centres. Besides, there are Maternity Hospitals and Nursing Homes at Ahmednagar, Alibau, Nasik, and Sholapur under the management of the society in connection with other organizations. Now Her Excellency the Countess of Inwin, the Countess of Reading, Lady Wilson, Lady Lloyd, Lady Willingdon, Lady Sydenham and Lady Chelmstord are Hon. Patronesses The institution is largely dependent upon public contributions and Government assistance The annual expenditure of the whole organiza-tion now exceeds Rs. 2,50,000. President: Shrimant Saubhagyavati H.H. the Rauisaheb of Sangh; Honorary Organiser and General Secretary: Mr. Gopal Krishna Devadhar, M.A., C.I.K.; Local Secretary and Treasurer: Mrs Yamunabai Bhat; Lady Superintendent and Secretary for Development and Collections Secretary for Development and Collections
Mrs. Janakhal Bhat (Kaiser-I-Inid Silver
Medal); Joint Lady Superintendents: Mrs.
Saralabai Naik, M.A., and Miss Dwarkabai
Bhat, B.A., B.T., Hon Secretaries, Nursing and
Medical Education Committee: Joint Hon
Secretaries: Dr. V. C. (lokhale, L.M.&S., Dr. N. L. Ranade, BA, Dr. V. R. Dhamdhere, MBBS. BA, MBBS, and

PRESS-OWNERS' ASSOCIATION, Bombay-RESS-OWNERS ASSOCIATION, DOMOSY—Started on 30th April 1919 to promote the interests of the printing and litho presses and allied trades, to bring about harmony and co-operation among press owners and proprietors and to take such steps as may be necessary in furtherance of the above objects.

Office: - Gaiwadi, Girgaum, Bombay 4. President .- Shet Pandurang Javjee, J.P. Secretary: -- Mr. Manilal C. Modi.

RANGOON LITERARY SOCIETY .- Patron . H E The Governor of Burma; President J. M. Symns, Esq., M.A., IFS, Director of Public Instruction, Vice-President Dr. H. B. Osborn, Road.

RECREATION CLUB INSTITUTE.—This Institu-tion was started in 1912-13 by the members of the Ismaily Dharmic (religious) Library in Bombay. Its central office is in Bombay with branches at Ahmedabad, Ahmednagar, Karachi, Hyderabad (Sindh), Poona, Warangal, etc. The aims and objects of the society are to elevate and improve the social, ezo-nomic and spiritual condition of the depressed and poor classes of people and with that

intent to found primary schools, associations and such departments and to take all constructive means to achieve the above objects. structive means to achieve the above objects. The Institute has 2 orphanages with 150 inmates, industrial works, domestic industries, sales depots, clubs, libraries, etc. t also issues two Anglo-Vernacular papers, The Ismatly (a weekly) and The Nizari (a monthly). Hon. Secretary, Gulamhuscin Virjee.

Henry Trueman Wood, late Secretary of the Society, gives the following account of the Indian Section. In 1857 a proposition was made by Mr. Hyde Clarke, who wrote to the Conneil suggesting that "a special section be formed for India, another for Australia, one for English America and so on." It was suggested that the Indian Section should meet once a fortught for the reading of papers. Nothing came of the suggestion until ten years later when Mr. Hyde Clarke returned to England, and in 1868 he renewed his proposal, but only proposing the formation of a Committee which should organise conferences on Indian subjects. This time the suggestion was taken up more warmly. Mr. Hyde Clarke himself was placed on the Council, and the Indian Conferences, which soon developed into the Indian Section, were started. "The Indian Section thus established became a most important department of the Society. It has had great results in India by spreading information as to the directions which the development of Indian manufactures and Indian products could most usefully take, and in England by giving similar in-formation as to the industrial resources and progress of India itself. The Section has received great help from the Indian press and it has in return been of service to the Indian press in supplying useful information to it. It has been of great value to the Society itself as the means by which many members have been added to its list, so that in lact, thanks to a very large extent to the work of the Indian Section and of the allied section for the Dominions and Colonies, a large proportion of the present number of members come from the dependencies of the Empire abroad." Secretary of the Society ( K. Mengies, C B E., M A., Secretary of the Indian and Dominions and Colonies Sections: W. Perry, BA., 1.0.8. (retar-ed) 18, John Street, Adelphi, London, W. C. 2

Hon. Secretary. Mrs. C. Peacock, 35, York SERVANTS OF INDIA SOCIETY -The Servants of India Society, founded by the late Hon Mr G. K. Gokhale in 1905, is a body of men who are pledged to devote all their lives to the service of the country on such allowances as the Society may be able to give. Its objects are to train national missionaries for the service of India and to promote, by all constitutional means the interests of the Indian people. Its present strength is 21 Ordinary members, 8 members under truning, I permanent assistant, and 1 probationer The Society has its headquarters in Poona with branches at

Madras, Bombay, Allahabad and Nagpur and other centres of work at Dohad in Gujerat; Mayanur, Coimbatore, Mangalore and Calicut in the Madras Presidency; Lucknow in U. P., Lahore in the Punjab and Cuttack in Bihar and Orissa.

The Society's work is primarily political but as it believes in all round progress of the Indian people, it has always laid equal emphasis on social, economic, educational, labour and depressed class activities and has worked in these depressed class activities and has worked in these fields. The political work is done through the legislatures the non-official political organizations, deputations to foreign countries and propaganda. The Right Hon. V. S. Srinivasa Sastri was in the old Imperial Legislative Council and in the new Council of State till 1924 and has to his credit many achievements. Pandit Hirday Nath Kunzru was a member of the U. P. Legislative Council and of the Legislative Assembly. He takes special interest in the questions of the Indianisation of Army, public services, education and Indians overseas, Mr. N. M. Joshi has been a nominated member of the Assembly since 1921 and has to his credit many a labour legislation Mr. N. A. Dravid was for three years a member of the C. P. Council, Mr. Joshi was a member of Bombay Municipal Corporation and Mr. R. R. Bakhale a member of the Board of the Port of Bombay for a short period. Mr. Kunzru has been the General Secretary of the National Liberal Federation of India, and Messrs. Joshi, S. P. Andrews, Dube and K. P. Kaul are Secretaries of its Provincial branches and have all done the work of organising political conferences. Messrs. Sastri and kunzru were members of the Liberal Party's deputation to England during the Reforms period of 1919-20. Mr. Sastri again toured some of the Dominions in 1921 on behalf of the Government of nions in 1921 on behalf of the Government of India to secure legitimate rights for Indians there; attended as India's representative the Assembly of the League of Nations and the Washington N val Disarmament Conference; went to England in 1923 as a Leader of the Kenya Deputation of the Indian Legislature; went in 1927 to South Africa as Agent-General of the Government of India under the now famous Cape Town Agreement for eighteen months; and lastly went to Kenya in 1929 on behalf of Government to place the Kenya Indian's case before Sir Samuel Wilson. His achievements in South Africa are a marvel to the world and brought the White and Indian convenities accessing communities together. Mr. Kunzru went in 1929 to Kenya to preside over the East African Congress and to England as the spokesman of the Kenya Indians to put their case before the British Government. Mr. P. Kodand Rao was in South Africa with Mr. Sastri and in Kenya with Mr. Kunzru and has mastered the question of Indians there. Mr. Joshi was a member of the Nehru Committee which is the author of the now famous Nehru Report on Constitutional Reforms. Messrs, Sastriand Joshi were members of the Round Table Conference and Mr. Joshi of the Consultative Committee and a Delegate to he Joint Select Committee.

of such institutions as the Poona Seva Sadan. of such institutions as the Poona Seva Sadan, Sombay and Madras Social Service Leagues, the U. P. Seva Samiti, the Bhil Seva Mandal catering for the needs and uplift of the aboriginal tribes in Gujerat. The Seva Sadan has been a model institution for the education of women which gives training to over 1,500 girls and women in all useful directions. It has many and women in all useful directions. It has many branches in different parts of India carrying on social and educational work. The Social Service League has done good co-operative, educational and welfare work for the mill workers in Bombay by starting Co-operative Societies, adult night and technical schools and conducting welfare centres. The Seva Samitis an unique organization in Upper India doing service to the pilgrims going to religious places such as Hardwar and Benares, and working in times of epidemics. Its Boy Scouts organization is a well-knit body recognised both by the public and Government. Mr. Chitalia by the public and Government, Mr. Chitalia conducts the Bhagini Samaj for social educational work among the Gujarati ladles. The Society has been conducting a model Depressed Class Mission in Mangalore and the Devadhar Malabar Reconstruction Trust activities at Calicut. In the Co-operative movement the Society has done the pioneering work in the Bombay and Madras presidencies. During natural calamities such has floods, famines and epidemics, the Society has done relief work in every part of India. By its work in the Moplah rebellion, the Society has become a household name in Malabar. Mr. Sastri was for many years a member of the Madras University Senate. Mr. Kunzru is a member of the Allahabad and Benares University sity Senates and Syndicates and Mr. Dube, a member of the Lucknow University Court and of the Lucknow District Local Board.

The Society has taken equally prominent part in various labour activities. Messrs. Joshi and Bakhale have been General and Assistant Secretaries of the All-India Trade Union Congress since 1925 and are greatly responsible for the shape given to the labour movement and for They have been President and General Secretary of the Bombay Textile Labour Union since 1926 and have conducted many Textile strikes. Mr. Joshi attended five times the International Labour Conference at Washington and Geneva as Indian Worker's Delegate and the British Commonwealth Labour Conference in 1925. Mr. Bakhale went to Europe in 1928 to attend Mr. Bakhale went to Europe in 1923 to avenu on behalf of Indian Labour, the Geneva Inter-national Labour Conference, the British Commonwealth Labour Conference, the Inter-national Textile Worker's Congress, the Labour and Socialist International Congress and the British Trades Union Congress. He studied the Trade Union movement in Great Britain. Germany and Russia. Mr. Parulekar and a few other members of the Society are doing similar labour work. Messrs. Sastri and Joshi were members of the Royal Commission on Indian Labour

The Society conducts three papers.-The Servant of India, an English weekly of which Mr S. G. Vaze is Editor, the Dnyan Prakash the oldest Marathi daily of which Mr In the field of social, economic and educational Limaye is the Editor and the Hitawad, a bi-week work, the Society's activities are equally varied. Some of its members are practically the founders Union Bulletin, and Mr. A. V. Patwardhan the Sansthani Swaraj, a Marathi weekly for the benefit of the subjects of Indian States. The Society has also published several pamphlets on public questions of the day.

The question of the subjects of the Indian States has also engaged the attention of the Society and some of its members, particularly Messrs. A. V. Patwardhan, S. G. Vaze, and A. V. Thakkar are devoting a part of their energies for that work.

Mr. G. K. Devadhar, M.A., C.I.E., is the President and Mr. H. N. Kunzru, is the Vice-President and Mr. S. G. Vaze, the Secretary. Messrs. V. Venkatasublaiya, Joshi, Kunzru and Dravid are senior members of the four branches.

The Society is a non-communal, non-sectarian body which does not recognise any caste distinctions.

SEVA SADAN.—The Seva Sadan Society was started on the 11th of July 1908, by the late Mr. B. M. Malabari and Mr. Dayaram Gidumal. It is the pioneer Indian ladies' society for training Indian sisters ministrant and serving (through them) the poor the sick and the distressed. To spread its Gospel far and wide, the first branch was opened at Poona as early as 1909. The Society has its headquarters in Gamdevi, Bombay. The Society maintains the following departments of work: (1) Home for the Homeiess: (2) Ashrams (Training Homes); (3) Marathi Normal Classes with a primary School (4) Home Education Classes; (5) Industrial Department including a workroom, Sewing, Cutting, Hosiery, Cooking and Pastry and machine and hand Embroddery are among the chilef industries taught. Total number of women in the different classes is nearly 300.

Secretary, Miss B. A. Engineer, M.A., LL.B., M.B.E., J.P.

Consumptives' Homes Society.—This Society was started by the late Mr. B. M. Malabari and Mr. Dayaram Gidumal on the 1st of June 1909. It was registered under Act XXI of 1860. Mr. Malabari secured a large grant of land in a Himalayan pine forest in Dharampur (Simla Hills) from H. H. the Maharaja of Patilals, for a Sanatorium for Consumptives. His Highness also gave a donation of Rs. one lakh. In 1911 by special permission the Sanatorium was named "The King Edward VII Sanatorium." The Sanatorium has its special water works known as the Lady Hardinge Water Works, presented by the late Sir Chinubhai Madhavlal, Bart., of Ahmedabad. The Sanatorium has a Guest House: The Noshirwan Adul Guest House for visitors to Dharampore. It has accommodation for 90 patients including the special Punjab Block built from a grant of the Punjab Government and reserved for European patients. Most of the blocks and cottages are built by Parsis. The Sanatorium has its own dairy and is called the Bai Pirolial R. M. Patuck Dairy. The Sir Chinubhai Madhavlal Dispensary has an out-patient department. The Recreation

Hall is called "The Sir Brupinder Singh Recreation Hall" after the name of the Maharaja of Patiala. Mr. Malabari collected an Endowment Fund of about 1 s. 67,000 lodged with the Treasurer, Charliable Endowments, under Act VI of 1890. Nearly Rs. 2,93,000 have been spent on laying out the sites, buildings, etc, and the current annual expenditure is about Rs. 56,000 The Senior and Junior Medical Officers are in charge of the Sanatorium. The Office of this Society is situated at the Seva Sadan Buildings, Gamdevi, Bombay. Mr. S. P. Wadia is the Hon. Secretary and Diwan Bahadur K. M. Jhaveri is the Hon. Treasurer.

Office .- 107, Esplanade Road, Fort, Bombay

WOMEN'S INDIAN ASSOCIATION (PANTHEON GARDENS, EGMORE, MADRAS)—This Association was started in Madras, in July 1917, with aims of service.

Aims and Obvets:—To present to women their responsibilities as daughters of India To secure for every gul and boy the right of Education through schemes of Compulsory Primary Education, including the teaching of religion. To secure the abolition of childmarriage and to raise the Age of Consent for married girls to sixteen. To secure for women the vote for Municipal and Legislative Councils on the same terms as it is or may be granted to men. To secure adequate representation of women on Municipalties, Taluk and Local

Boards, Legislative Councils and Assemblies. To secure for women the right to vote and to be elected for the Council of State. To establish equality of rights and opportunities between men and women. To help women to realise that the future of India lies largely in their hands; for as wives and mothers they have the task of training, guiding and forming the character of the future rulers of India. To band women to groups for the purpose of self-development and education and for the definite service of others.

It has 48 branches and over 4,000 members. Each branch is autonomous and works according to the needs of the locality.

The Association grants scholarships to girls, interests women in maternity and child-welfare work in the uplift of the depressed class and in other social and welfare activities for the general betterment of Indian society; has worked successfully for securing Franchise for women in India, (see pages 93 and 94 of the Simon Report, Vol 11) and compulsory education for girls and also actually helped in the passage of Child-Marriage Restraint Act in the Assembly and the Acts for the Suppression of Traffic in women and children and the abolition of the Devadasi system, in the local legislature. Holds regular meetings of women to educate them as to their duties as wives, mothers and citizens, publishes a mouthly magazine titled Stri-Dharma, now edited by Mrs. Meheron H. Dadabhov for carrying out of the above objects. The Association is an All-India body. Its largest branch being in Bombay and its branches are spread throughout India and flourishing as tar as Kashmir and Jashkar. It is found that women everywhere welcome the opportunities given for their self-development and self-expression. The Association is affiliated to all the important progressive women associations in India and throughout the world. It was the initiator of the All-India Women's Conference and the First All-Asian Women's Conference at Lahore The Madras Seva Sadan and the Madras Children's Aid Society, the Montesson School owe their origin to the efforts of this Association The Association have now opened a Rescue Home to facilitate the working of the Rescue Section of the Immoral Traffic Act, which have been entorced by Government. The Home was opened on 21st March 1934 by Lady Beatric Stanley.

Young Men's Christian Association,—
This Association, which was founded by the
late Sir George Williams in 1844, is now a
world-wide movement, well established in
almost every country in both the hemispheres.
The aim of the Association is, through its
religions, social, educational, and physical
work to answer the fourfold—spiritual,
social, mental and physical—needs of young
men and boys.

The Young Men's Christian Association. though relatively new to India, is spreading rapidly. The 'local' Associations are autonomous and governed by local Boards of Directors. These Associations in Convention

elect a National Council which is responsible for the supervision and expansion of all forms of the Association work in India, Burma and Ceylon.

There are now over 60 Associations affiliated to the National Council and many other village Associations with many thousands of members of all races and creeds. The following Associations own one or more buildings which serve as the local headquarters —Allahabad; Alleppey; Rangalore; Bombay; Calcutta; Calicut; Coimbatore; Colombo; Delhi; Galle; Hyderabad; Jubbulpore; Kandy; Karach; Kuunamkulam; Kottayam; Lahore; Madras; Madura; Magpur; Naini Tal; Ootacamund; Poona; Rangoon; Risalpur; Secunderabad; Simla; Trivandrum; Welliugton. The others use rented or rent-free buildings.

The work of the National Council and of the local Association is carried on by numerous voluntary workers and Committees, assisted by 85 specially trained full-time Secretaries A feature of the Y.M. C. A. in India is the international character of its Secretariat. It is made up of 7 Americans, 2 Canadians, 5 Englishmen, 3 Seotchmen, 1 Swiss, 1 Swedish, 4 Anglo-Indians, 1 Danc, 2 Austrahans, 1 Burman and 58 Indians and Ceylonese.

The classes of people reached by the Indian Y. M. C. A. and the lines of service it attempts to do for them may be stated as follows:—

Generally:—1. Literature:—Publication of original works and reprints Six series:

- "Heritage of India;" "Religious Quest of India;" "Religious Life of India;" "Builders of Modern India," "Education of India;" "Heritage of Ceylon," "Women of India."
- 2. Lecture Burcau:—Many thousands of shdes on a wide variety of educational and recreational topics serving a clientele in over 700 centres in India.

Rural Communities.—"Bural Reconstruction" work embracing Co-operative Banking, Distribution, Cattle Insurance and Arbitration, Cottage Industries, and Adult Education in four Selected Centres.

A monthly magazine, the Young Men of India, Burma and Ceylon is issued at Rs. 2-8-0 per annum, including postage.

The work of the National Council (excluding that of the 50 local Y.M.C.As.) called for a Budget of Rs. 1,25,662 in 1933. Of this sum Rs. 28,790 had to be raised from the public in India.

The Headquarters of the National Council is 5, Russell Street, Calcutta The officers are .—

Patron:—His Excellency the Earl of Willingdon, G.M.S.I. GMIE, GCMG, G.B.E, Viceroy and Governor-General of India.

President of the National Council:—The Most Rev. Dr. Foss Westcott, Metropolitan of India.

General Secretary :-B. L. Rallia Ram, B.Sc., B.T.

The Bombay Association now possesses four well-equipped buildings:—Wodehouse Road, Lamington Road, Rebsech Street, and Reynolds Road. The President is The Hon. Mr. Justice K Barlee and the General Secretary is Mr. H. W. Bryant, M.B.E. In connection with each branch there is a well managed hostel providing accommodation for over 200 young men. These branches are managed by a Committee working under the Board of Directors. Each Branch organisation directs many and varied activities designed to meet the physical, splitual, social, and mental needs of their members. A Welfare Service agency for labourers started in 1924 is now conducting eight centres, serving mill workers, Municipal menial employees, Port Trust and Railway employees. A programme of education, lectures, physical culture, play and general uplift, profitably fills up the leisure time of the workers and their families. The Association is responsible for the direction of three public playgrounds in the city, which are financed by the Municipality.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION OF INDIA, BURMA AND CEYLON,—This Association founded in the year 1875 was organised nationally in 1896.

The am of the Assicution is to unite women and gurls of India, Burma and Ceylon in fellow-ship and mutual scrvice for their spititual, intellectual, social and physical development. The Association exists for Indian, Anglo-Indian and European girls and women. There are

members in the following branches: General 35, are manned by a staff of trained secretaries, Schoolgirl 22, Student 29, Girl Guide Companies some of whom come from Great Britain, America, 35. These transfers of the holds are the charge with the charge of the control of the charge of the control of the charge hostels accommodate working girls, teachers, nurses, students and apprentices. Rates vary according to the residents' salaries and accommodation, though all equally receive the benifits of a comfortable home, good tood and wholesome The holiday homes provide Surroundings cheap holidays in healthy surroundings and also accommodate girls who work in the hills during the hot season. In addition to holiday homes Summer Conterences are held annually at Anandagiri, the Conterence estatew oned by the Association, in Octacamund Special Guls, Camps are arranged from time to time in many centres.

Traveller's aid work is done in the large ports, especially Colombo, and a large number of transient guests and visitors are accommodated in the Homes in these centres. The Association also runs employment bureaux through the agency of which many girls find positions. The commercial schools train guls for office and business life. These large Associations the Association.

Australia, New Zealand and Canada. The others are found and trained in India. In many of the smaller branches where the work is of a simpler nature, it is carried on by volun-tary workers who render faithful service year by year. The Student Department is affiliated to the World's Student Christian Federation and has 43 branches in the various Schools and

The Association, which is affiliated to the World's Young Women's Christian Association is international and interdenominational, Active membership is open to all who declare their taith in our Loid Jesus Christ and desire to serve others in His spirit of love, and Associate membership is open to any girl or woman regardless of what her religion may be, who wishes to join the world-wide fellowship of the Y. W. C. A and declare her sympathy with its purpose, and to share in its activities.

The Patroness of the Association is H. E. The Lady Willingdon.

Copies of the Annual Reports and other printed matter can be obtained from the National Office which is at 134, Corporation Street, Calcutta. The official organ of the Association is the leadet "Everymember" which is issued each month and sent to members and friends of

# ASSOCIATION OF BRITISH UNIVERSITY WOMEN IN INDIA.

The Association of British University Women in India was established in 1913. Its objects

- (1) To facilitate Intercommunication and co-operation between women belonging to the universities of the United Kingdom, resident in India.
- (2) To provide a means of keeping in touch with the universities of the United Kingdom by communication with the British Federa-tion of University Women, and otherwise as may seem expedient.
- To act as an organisation which shall afford opportunity for the expression of united opinion and for concerted action by university

Membership is open only to those women who hold degrees in any university in the United Kingdom, or hold Oxford or Cambridge Honours Certificates; but Associate Member-Branch may admit as Honorary Members women who have advanced the higher education and interests of women.

The Association of British University Women has two branches. The addresses of the Honorary Secretaries are as follows :-

#### Hony. Local Secretaries.

Bombay

.. Mrs. C. M. Scott, Divisional Engineer's Quarters, Central Telegraph Office, Bombay.

Punjab

.. Mrs. Skemp, Race Course Road, Lahore.

The Delhi and Punjab Branches came into existence in 1918. The Calcutta and Bombay Branches are influential and have repeatedly intervened with good effect to educate public opinion with regard to subjects affecting women. All Branches have, for instance, made investigations on behalf of the Education Department, Government of India, the Calcutta University Commission, etc., and have supplied, through the International Federation of University Women, information on Secondary Education in India ship is open to women who have studied at a to the League of Nations. They have been British University for two years and each the means of introducing women on to University Branch may admit as Honorary Members Senates and Municipalities. The Calcutta Branch carried through an important exhibition of Food Products.

The Bombay Branch has done good work in connection with the formation of the Social great. The CI Purity Committee and has, through a special sub-committee, organized public meetings for women on subjects affecting their interests about which legislation was being or had been recently enacted.

During 1922 a

A valuable part of the work of the Association was the establishment of Women's Employment Bureau in Calcutta and Bombay. They were remarkably successful. The Bombay Bureau was eventually merged into the employment Bureau established by the Women's Council; the Calcutta Bureau has ceased to exist.

As a means of promoting friendships between women from various parts of the United Kingdom, with widely differing tastes and interests and spheres of life in India, and as an instrument for affording opportunities for usefulness to educated women, the Association of University Women has a useful function to perform.

This Association is Federated to the "Federation of University Women in India," and thus forms one of the Units of the Indian Federation.

## Federation of University Women in India.

This is an organization conceived to unite for service and fellowship all University Women of whatever race or University who may be resident in India, Units representing British Universities, Indian Universities and American Universities severally have existed since 1913 (Britain) and 1920 (India and America) respectively.

These Units are now affiliated to the F. U.W. I. and are as such affiliated to the International Federation of University Women which embraces 31 countries of the world and has its headquarters at Crosby Hall, Cheyne Walk, London

This International Federation is then a kind of League of Nations in which the University is the Unit: and the opportunities it affords for better understanding for world-friendship, and world service, will easily be imagined.

As forming one Family, its Members help the common cause of women: they help one another by inspiration and interchange of service: they help the country for which as individual Units they stand, inasmuch as that country is swept torthwith by reason of its place within the International Federation alone, into world statistics and the dignity of recognition by the League of Nations at Geneva.

The benefit to Members individually also is great. The Club Houses of the Federation all over the world are open to them. Equally so are all Scholarships and Fellowships offered by the Federation.

of the gave free tuition, board and residence at Women's certain Colleges to students for a degree residuccessful. The control of the gave free tuition, board and residence at certain Colleges to students for a degree residential scholarships at Crosby Hall, valuable uccessful. Fellowships and Prizes offered chiefly for Medical or Scientific research by Australia and America.

A special scholarship was offered in 1929 by Barnard College, Columbia University to under-graduates from India.

Membership is open to Women Graduates of any University through the Unit representing that University. Colonial Graduates are at present attached to the British Unit. The Bombay Presidency Women Graduates' Union offers membership to a graduate of any recognised University in the whole world.

Subscriptions.—Each Unit pays capitation at 8 as. per head.

The Federation has Branches in Bombay, Lahore, Madras, Kodaikanal. Each Branch has its local Committee. But as a whole the Federation is under a Central Committee with Headquarters as Calcutta for the years 1928 and 1929. Headquarters are at Bombay from 1930.

OFFICE BEARERS, CENTRAL COMMITTEE.

President Dr. Muthulakshmi Reddi, M.B., C.M.

LOCAL REPRESENTATIVES.

Bombay .. Mrs. C. M. Scott.

Miss I. Baptist.

Punjab .. Mrs. Skemp.

Madras .. Miss Joseph.

Kodaikanal. . Mrs. C. McClalland.

Honorary General Secretary: Mrs. Doctor, Hirji Mansions, Gowalia Tank Road, Bombay 6.

Applications for membership should be made to the Honorary General Secretary who will forward the same by the Local Secretary to whose Unit it may appertain.

Hon. General Secretary: Mrs. Gulbanu J. R. Doctor, Federation of University Women in India.

ASSOCIATION OF COLUMBIA UNIVERSITY ALUMNI IN INDIA —This is an organization conceived to unite for service and fellowship all Columbia alumni who may be resident in India. It was tounded in 1931, and is a constituent member of the Alumni Federation of Columbia University, New York, U.S.A. There are more than fifty such Columbia Associations including one in London, Paris, Madrid and Berlin. The India Association has its Headquarters in Bombay.

President of the Association: Dr. Jal Dastur C. Pavry, M.A., Ph.D., 63, Pedder Road, Malabar Hill, Bombay.

# The Church.

March 1, 1930, a self-governing branch of the Anglican Communion. Until that date it had been an integral part of the Church of England and its bishops were considered to be suffragans of the Archdiocese of Canterbury. This legal bond was severed by the passing of the Indian Church Act and Measure in 1927, and from the Church Act and Measure in 1927, and from the date of severance appointed under the Act, the Church of India, Burma and Ceylon has been free to manage its own affairs, although, as it states in the Preamble to its Constitution, it has no intention or desire "to renounce its obligations to the rest of the Holy Catholic Church and its fundamental principles, but on the contrary acknowledges that if it should abandon those fundamental principles it would break spiritual continuity with its past and destroy its spiritual identity."

Like all the other branches of the Anglican communion the Church of India, Burma and Ceylon is Episcopal. It is composed of fourteen sees, Calcutta, Madras, Bombay, Colombo, lahore, Rangoon, Travancore and Cochin, Chota Nagpur, Lucknow, Tinnevelly and Madura, Nagpur, Dornakal, Assam and Nasik. Of these the first to be erected was Calcutta in 1814 and the last was Nasik in 1920. Vacancies 1814 and the last was Nasik in 1930. Vacancies on the Episcopal Bench are filled by election, each diocese electing its own bishop. The Bishops rule the Church and to them is reserved the final word in all matters of faith and order, but they rule in conjunction with a system of Councils which has been framed so as to give the greatest possible amount of representation to the whole body of the faithful. The foundation of the system is the Parochial Council of which the Parish Priest is the convenor and chairman. Every baptised, and confirmed member of the Church residing in the parochial area who contributes, in some recognised way, to the financial support of the Church, is a member of the Parochial Council of the ecclesiastical area in which he resides and is called a Qualified Elector.

Above the Parochial Councils come the Diocesan Councils. All Priests holding the Bishop's license are members of the Diocesan Council and to it are sent Lay Representatives elected by the Qualified Electors of every Parochial Council. The Diocesan Councils manage all purely domestic matters and have the right of petitioning the General Council about any subject of wider importance which may interest them. They elect a given number of priests and laymen to be their representatives on the General Council. General Councils are on the General Council. General councils are held not less than every three years and usually at Calcutta. They consist of three "Houses," Bishops, Priests and Laymen. Every Diocesan Bishop has a place in the House of Bishops. The other two Houses are formed by the elected.

The Church of England in India became on | but any House has the right to meet alone if it desires to do so in order to formulate its if it desires to do so in order to formulate its polley or classify its opinions. A "Canon" of the Church is a Resolution passed with additional precautions ensuring due consideration by all three Houses. In all questions touching faith or Order the position of the episcopate as the divinely authorised teacher of the Church is most carefully safeguarded and the Rishops alone without the concurrence and the Bishops alone, without the concurrence of the other Houses, can issue Determinations about both subjects. But no Determination of the Bishops can be the subject of disciplinary action until it has become a Canon.

Every priest before being licensed to work in the Church of India, Burma and Ceylon takes an oath of obedience to the Canons.

The Ecclesiastical Establishment.—At the time of the passing of the Indian Church Act and Measure the Government of Indian church acknowledged that it was responsible for providing for the spiritual needs of the Soldiers and Civilians whom it brought out to India. These responsibilities it discharges by maintaining an establishment of chaplains and churches for the four principal denominations of Christians— Anglican, Presbyterian, Roman Catholic and the Free Churches. The Chaplains of the two first named groups are appointed by the Secretary of State for India, the Anglicans on the recommendation of a Selection Committee of which the Archbishop of Canterbury is the Chairman. They are paid by Government and pensioned after a covenanted period of service. Although they form a definite Department of Government they are not subject to the orders of anyone save their own ecclesiastical superiors. The Presbyterian Chaplains are sometimes appointed to stations and sometimes to regiments. The Anglican chaplains are always chaplains of stations and have the pastoral care of all the inhabitants of the station pastoral care of all the inflantants of the station who do not deliberately withdraw themselves from their ministrations, but when troops are included in the number of their parishioners. Government orders that they shall have the first claim on their services. The chaplains and their congregations are members of the Church of India, Burma and Ceylon during their residence in India and have full rights of representations. residence in India and have full rights of representation in the Councils of the Church. Their right to the use in worship of the Prayer Book of the Church of England is not only acknowledged in the Constitution of the Church but is also safeguarded by clauses in the Indian Church Act.

Government gives to the Metropolitan an annual block grant which is divided between the seven bishops whom Government recognises as having jurisdiction over the Establishment Chaplains and their congregations. These the Chapter of Columb Meters representatives of the Diocesan Councils. #### Christian Missions.

ment. One of the difficulties which the Church is facing is that the Government Block Grant is not large enough to provide for all the needs of these bishops. In consequence the Church is struggling to raise Diocesan Endowment Funds to make up deflerts. More serious still, however, is the situation brought about by the action of Government in 1924, when in pursuance of a general policy of economy necessitated by post-war conditions it cut down the number of its chaplains by sixty. This set the dioceses a very difficult task. It became necessary suddenly to provide the salaries of Diocesan Chaplains and to furnish funds for the upkeep of the churches of many civil stations previously maintained by Government. Realising the magnitude of this burden Government agreed to help for a period of seven years by means of a very generous Block Grant. The question of the reduction of this grant is now under consideration. If the grant is considerably reduced the situation in most dioceses will be very serious. Either the Church must have and devote to its European work a greatly increased sum of money or many of the churches in up-country stations will be very serious. Either the Church must have no be closed. The chief sufferers will be the Anglo-Indian and Domiciled community which on account of "Indiansation" is less able than ever to carry the burden which it seems must invitably be land upon it This difficulty of raising imads for the education of the children of this community is less able than ever to carry the burden which it seems must invitably be land upon it This difficulty of raising imads for the education of the children of this community is the barkshone of the Church in India and it is through this community in the development of the children of this community is the barkshone of the Church in India and it is through this community in the conversion of India nurse considerable and it is through this community in the conversion of India nurse consequence of the children of the churches in India have not bee The tradition that St. Thomas, the Apostle, The Churches in India have not been wholly blind to these facts and have made bably exceeds that figure at the present

"religious difficulty" in the schools of the importance is attached to these agencies for the European and Anglo-Indian communities.

preparing students for University degrees greatness of the gulf which separates Christian But the proportion of Christian students in from non-Christian, the differences of "contheir institutions is very much larger than those of the Protestant bodies. The proin those of the Protestant bodies. The pro-portion of literates amongst native Roman Catholics is probably lower than amongst the Protestant converts; but compared with Hindus and Mahomedans it is conspicuously Ingher. The Roman Catholics have some 5,000 elementary schools in which 98,000 which is a group union of five of the principal boys and 41,000 girls are receiving instruction In middle and high schools they have 143,000 boys and 73,000 girls and in Uni-versity colleges about 5,000 students of both, sexes. These figures, however, include a large proportion of Europeans and Eurasjans, who are an almost negligible quantity in Protestant as seems probable the negotiations are suc-cessful the result will amount to a union of mission schools and colleges.

their hands. Orphanages and industrial schools became an urgent necessity. But the philanthropic spirit is never satisfied with one kind of organisation or method. A great tradition of the Anglican Church. Stimuus was also given to medical missions.

Anglican Missionary Society of the Anglican Church. Hospitals and dispensaries have sprung up in effort. In 1911 the total number of medical missionaries working under Protestant socie-ties in India was 118 men and 217 women, the majority of the former being also ordained ministers of religion. There are 184 industrial institutions in which 59 different arts and crafts are taught, ranging from agriculture to The indirect effect of all this philanthropic activity under missionary auspices has been most marked. It has awakened the social activity under missionary suspects the social missionaries of the C. M. S. in India according to most marked. It has awakened the social missionaries of the C. M. S. in India according to the non-Christian public, and is 160, European laymen 30 and European laysuch movements as "The Servants of India" women 258. The Society claims a Christian and the mission to the Depressed Classes are merely the outward and visible sign of adult communicants. Society for the propagation of the Gospelagrand the outward the society are not considered the society and the society are not considered the society and the society are not considered the society and the society are not considered the society and the society are not considered the society and the society are not considered the society and the soc operations.

statesman and the publicist are chiefly interseted in the excellent moral effect produced and disadvantage of the divisions of Christenby these institutions amongst the educated classes, and the higher educational ideals maintained by their staffs. The principal mointained by their staffs. The principal political causes, and in the political conflicts University colleges under Protestant auspices are the Madras Christian College; the Duff College, Calcutta; the Wilson College, Bombay; the Forman College, Lahore, and three women's Christian College at Lucknow, and the Women's Christian College at Lucknow, and the Women's Christian Medical College at Luchnow, and the Women's Christian Medical College at Luchnow, and the Women's Christian Medical College at Luchnow, and the Women's Christian Medical College at Luchnama. The Roman Cathohes have a large foundation seem to be of very little account of Dindan converts. For them the great dividing line is that between Christ and Mahommed or Shiva and Vislinu. Standing before a background of paganism they are conscious of a real fundamental unity in Circle. cessful the result will amount to a union of More recent, but producing even more wider all the Christian bodies in South India, except spread results, is the philanthropic work of the Roman Catholes, on the basis of the last Christian missions. Before the great familie Lambeth encyclical. This will mean that a of 1878, missionaries confined themselves almost exclusively to evangelistic and educational activity. The famine threw crowds of destitute people and orphan children upon will retain the freedom of development characteristics of Protections will hear that a factoristic of Protection of Protecti tensice of Protestantism, by its acceptance of the Catholic creeds and the Historic Episcopate, it will be linked up with the Catholic

# Anglican Missionary Societies.

The Unurch Missionary Society carries on work all parts of the mission field; and leper asylums in India in seven different missions—the United are almost a monopoly of Christian missionary in India in seven different missions—the United are almost a monopoly of Christian missionary in India in seven different missions—the United are almost a monopoly of Christian missionary in India in seven different missionary society carries on work Provinces, South India, Travancore and Cochin, Bengal, Western India, Punjab and Sind and the Central Provinces and Rajputana. The names are in order of semonity. Work was begun in what are now called the United Pro-Work was vinces in 1813, in Bombay in 1820, in the Punjab in 1851, and in the Central Provinces in 1854. The Society has always kept Evangelistic work tion Army hold a prominent place; and the confidence of Government in their methods medical missions, especially on the N.-W. Froncing dense shown by their being officially dense shown by their being officially and high standards. The Church of England entrusted with the difficult work of winning Zonana Missionary Society is an offshoot of the over certain criminal tribes to a life of industry.

[C.M. S. controlling the work of 162 missionary bedden The number of ordained European ladies. The number of ordained European missionaries of the C. M. S. in India and Ceylon

easily ascertained, as much of it is done through Reunion.—For very many years Indian Diocesan institutions, which, while financed and Christians have shown that they felt much in many cases manned by the S. P. G., are entirely controlled by the Diocesan authorities. The best known of the S. P. G. missions is that Delhi, commonly called the Cambridge Mission to Delhi, carrying on educational work at St. Stephen's College and Rchool. At the at St. Stephen's College and Rchool. At the instruction, and at the High School 800. The College hostels accommodate 100 students Missions to the depressed classes exist in Burma, in the Ahmednagar District and in several parts of South India, especially in the Diocese of Tinnevelly-Madura. The S. P. G. also maintains an important Criminal Tribes also maintains an important Criminal Tribes Settlement at Hubli, in the Bombay Carnatic. There are 116,000 Indian Christians under the aegis of the S. P. G.; 90 ordained European missionaries and 98 European lady workers.

Other Anglican Societies.—The Oxford Mission to Calcutta was started in 1880 It works in the poorest parts of Calcutta and also at Barisal. There are 11 mission priests of this Society, and 16 Sisters. In addition to its work amongst the poor, the Oxford Mission addresses itself to the educated classes in Bengal and issues a periodical called *Epiphany*, which is known all over India.

The Society of St. John the Evangelist (com-

12-18

The Bible Churchmen's Missionary Society carries on work in India in three missions—the Central Provinces, the United Provinces, and Burma. Work was begun in all of these Provinces in 1924. The work of the Society is primarily Lvangelistic and this work is carried on by means of Hospitals, Dispensaries, Schools and Camps. The Society has 17 principal Stations of which 5 have Hospitals and 7. Schools tions of which 5 have Hospitals and 7 Schools, the latter including the School for the Deaf in Rangoon. The number of Ord ined European missionaries of the B.C. M. S. in India and Burma is 11, Doctors 4, European laymen 11 and European laywomen 61. There are 54 Indigenous workers including 3 Doctors. Statistics of the Christian community from all Stations are not available.

An interesting development has lately taken place in the Anglican communion. In 1922 the foundations were laid of a new Religious com-munity called the Christa Seva Sangh or the Society of the Servants of Christ. The aim of its members is to enable Indians and Europeans The Society of St. John the Evangelist (community called the Christa Seva Sangh or the multy known as the Cowley Fathers) has house at Bombay and Poona, and small stations in the Bombay Ronkan. In Bombay its missionary to live together a common life based upon the work centres upon the Church of Holy Cross to live together a common life based upon the Umarkhadi, where there is a school and a dispensary. The Christians are chiefly drawn glous life along lines peculiarly suited to India. From the very poorest classes of the Bombay indians appreciate fully the value of "renuncia-population. At Poons the Society co-operates with the Wantage Sisters and in Bombay with the Wantage Sisters and in Bombay with claimty to India by presenting it with a concrete the All-Saints' Sisters. Other Anglican sister hoods represented in India are the Clew All-Saints' Sisters. Other Anglican sister hoods represented in India are the Clew All-Saints' Sisters. The Saints with the Wantage Sisters and in Bombay with the Wantage Sisters and the Sisters of the Christa Seva Sangh or the munity called the Christa Seva Sangh or the munity called the Christa Seva Sangh or the munity called the Christ. The aim of the Society of the Servante of Christ. The aim of the very poorest, which is members is to enable Indians and Europeans to live together a common life based upon the white together a common life based upon the white members to live together a common life based upon the white members is to enable Indians and Europeans.

### THE ROMAN CATHOLIC CHURCH.

With regard to numbers, the Catholic Directory of India gives the following tables:—

2 4			1911	1921	1931
St	sh India and I	ndian			
(a	) Latin Rite .	• •	1,814,620	1,851,408	2,164,918
(b	Syriac Rites.		364,686;	440,488	549,981
2. Free	ch India .		25,918	25,480	25,492
3. Port	uguese India .		296,148	288,741	326,690
Tota	l, India .		2,301,346	2,606,117	8,067,081
4. Ceyl	on		322,163	363,986	394,993
Tot	al, India and Ce	ylon	2,623,509	2,970,103	8,462,074

NOTE (1):—In 1860, the total for India and Ceylon was 1,170,854. In 1880 it had risen to 1,610,265 and in 1900 to 2,201,674.

NOIE (2):—In 1860 there were 1,504 priests. In 1921 there were 3,156. In 1931 there were 3,625.

- The Catholic community as thus existing is composed of the following elements:—
  - (i) The "Syrian" Christians of the Malabar Coast, traditionally said to have been converted by the Apostle St. Thomas. Converted by the Aposte St. Thomas, They were brought under allegiance to the Pope by the Portuguese in 1599, and placed first under Jesuit bishops and then under Carmelite Vicar-Apostolics. They are at present ruled by an Archbishop and three suffragan Bishops of their own Syriac rite.
  - (2) Converts of the Portuguese missionaries from 1500 and onwards, starting from Goa and working in the south of the peninsula and up the west coast, Ceylon, Bengal, etc.
  - (8) European immigrants at all times, including British troops.
  - (4) Modern converts from Hinduism and Animism in recent mission centres.
  - (5) Recent converts from the Jacobite community in Malabar, of which 2 Bishops, 50 priests and Some 10,000 laity have been "united" to the Catholic Church.
- The Portuguese mission enterprise, starting after 1500, continued for about 200 years, after which it began to decline. To meet this all belong to religious orders, congregation or mission seminaries, and in the great majorathy and the property of the pr the Congregation de propaganda fide, till by the middle of the 19th century the whole sountry was divided out among them except such portions as were occupied by the Goa clergy. Hence arose a conflict of jurisdiction of the "Padroado" or royal patronage, and the propaganda elergy. This conflict was set at rest by the Concordat of 1886 (amended by the Agreement of 1928, abolishing "double at the conflict was set of the Concordat of the Agreement of 1928, abolishing "double agreement of 1928, abolishing "double the Agreement of 1928, abolishing "double the conflict of the conflict of the concordation of the conflict of the co jurisdiction"). At the same time the whole country was placed under a regular hierarchy, which after subsequent adjustments now stands as follows:—
- Under the Sacred Congregation of Extraordinary Ecclesiastical Affairs:
  - The archbishopric of Goa and Damaun (having some extension into British territory) with suffragan bishoprics at Cochin and Mylapore (both in British territory).
- Under the Sacred Congregation of Oriental Churches: ~
- The archbishopric of Ernakulam, with Suffragan bishoprics of Changanacherry. Kottayam and Trichur.
- Immediately subject to the Holy See :-
- The archbishopric of Trivandrum, with suffragan bishopric of Tiruvella.
- Under the Sacred Congregation of Propaganda Fide:-
  - The archbishopr'e of Agra, with suffragan bishoprics of Allahabad and Ajmere.
  - The archbishopric of Bombay, with suffragan bishoprics of Poona, Mangalore, Calicut, Trichinopoly and Tuticorin, and the Missions of Ahmedabad and Karachi.

- The archbishopric of Calcutta, with suffragan bishoprics of Ranchi, Dacca, Chittagong, Krishnagar, Dinajpur, Patna and Shillong and the Prefecture Apostolic of Sikkim.
- The archbishopric of Madras, with suffragan bishoprics of Nellore, Hyderabad, Vizagapatam and Nagpur, the Prefecture-Apostolic of Jubbulpore, and the Missions of Cuttack and Bellary.
- The archbishopric of Pondicherry (French), with suffragan bishoprics of Mysore, Combatore, Kumbakonam, Salem and Malacca.
- The archbishopric of Simla, with suffragan bishopric of Lahore and the Prefecture-Apostolic of Kashmere.
- The archbishopric of Verapoly, with suffragan bishoprics of Quilon, Kottar and Vijayapura m.
- The archbishopric of Colombo (Ceylon), with suffragan bishoprics at Kandy, Galle, Jaffna and Trincomalee.
- Three Vicariates Apostolic and one Prefecture
- rity are either French, Belgian, Dutch, Swiss, Spanish or Italian by nationality. They number about 1,300 besides which there is a body of secular clergy mostly Indian, etc., numbering about 2,200, and probably about 2,000 nuns. The first work of the clergy is parochial ministration to existing Christians, including railway people and British troops. Second comes education, which is not confined to their own people; their schools being frequented by large numbers of Hindus, Mahomedans, Parsis, etc. Among the most important institutions are St. Xavier's the most important institutions are st. Asver's College, Csicutta, St. Peter's College, Aga, St. Kavier's College, Bombay, St. Joseph's College, Trichinopoly, St. Aloysius College, Mangalore, Loyola College, Madras, teaching university courses; besides a large number of high schools and elementary schools. The education of girls is supplied for by numerous convent schools worked by religious congregations of nuns to say nothing of orphanages and other charitable institutions. The total number under education amounted in 1904 to 143,051 boys and 73,164 girls, later figures being unavailable. As to missionary work proper, the country is covered with numerous modern mission centres, among which those in the Punjab, Chota-Nagpur, Krishnagar, Gujerat, the Ah-meduager district and the Telugu coasts may be mentioned. (Full particulars on all points will be found in the Catholic Directory already quoted.) The mission work is limited solely by shortage of men and money, which if forthcoming would give the means to an indefinite extension. The resources of the clergy after the ordinary church collections and pay of a few military and rallway chaplaincies are derived mainly from Europe, that is, from the coll stions of the Society for the Pro-

pugation of the Faith and of the Holy Childhood, helped out by private or other donations secured from home by the different local misascented from nome by the different local mas-sionaries. In mission work the fathers count as enrolled only those who are baptised and persevering as Christians, and no baptism except for infante or at point of death, is administered except after careful instruction and probation. This, while keeping down the record, has the advantage of guaranteeing solid results.

The ne Holy See is represented by a Delegate Apostolic of the East Indies who resides at Bangalore. At present this post is occupied by the Most Rev. Archbishop Kierkels. D.D. appointed in 1931.

### THE CHURCH OF SCOTLAND.

The Church of Scotland and the United Free Church have become one. The Union, offected in October 1929, has already exerted a profound influence upon the life of the Church of Scotland in India. The Chaplaincy work of the Church of Scotland dates from 1814, when the Rev. Dr. Bryce landed 1814, when the Rev. Dr. Bryce landed 1814, when the Rev. Dr. Bryce landed of his Scotlash fellow countrymen. The centenary of the churches in the three breatdency towns was celebrated: Calcutta, 1914: Bombay, 1919; Madras, 1921. Since antienty of whom nine belong to the Bengal Presidency, five to Bombay, and four to Madras. These minister both to the Scottish troops and to the civil population of the towns where they are stationed, but when there is a Scotland to Churche in the Church of Scotland has also done much to provide education for European in the Church of Scotland has also done much to provide education for European in the Church of Scotland has also done much to provide education for European in the Churche in the Churche in the Churche in the Churche in the collection of the Churche in the collection of the Churche in the collection of the Churche in the collection of the Churche in the collection of the collection of the Churche in the collection of the co they are stationed, but when there is a Scottish regiment the chaplain is attached to the regiment, instead of being posted to the station where the regiment happens to be placed and as a rule moves with the regiment. There are three Presidency senior Chaplains in charge of Bengal, Bombay, and Madras respectively. There are churches in the chief towns of the There are churches in the chief towns of the Presidencies, and churches have also been tuilt, in all considerable military stations, e.g., Chakrata, Lucknow, Peshawar, Ranikhet, Rawalpindi, Sialkot, Umballa and Jubbulpore. In addition to the regular establishment there are a number of acting Chaplains sent out by the Colonial Committee of the Church of Scotland, and these are serving in such Church of Scoulant, and cheef are serving in such stations as Rawaipindi, Lahore, Cawnpore, Meerut, Mhow and Quetta, The Additional Clergy Societies in India contribute towards the cost of this additional establishment. In other places such as Sialkot, Murree, Dalhousic, and Darjeeling, regular services are provided by Scottish Missionaries. Simla has a minister of its own sent out from Scotland.

The Mission work of the Church of Scotland dates from 1829, when Alexander Duff, one of the greatest of modern missionaries, was sent to Calcutta. He was the first to open schools where English was made the medium for instruction, and where religious teaching was given daily. Similar educational missions was given daily. Similar educational missions were soon afterwards started in Bombay and Madras. Educational work is still an important branch of the mission work of the Church, but the Bombay College was slosed in 1819 and in 1907 the College in Calcutta was united with the College in Calcutta was united with the College of the United Free Church of Scotland, to form the Scottish Churches College. In the Punjab Evangelistic work is being carried on from eight centres under severage of the United Free Church carries on Mission work in severage and Chinara); the Santal Pargand with five stations; Western India (Bomba Poona and Alibag); Hyderabad State (Jahr Bethel and Parbhanl); Madras (Madras (Madras City, Chingleput, Sriperumbudur and Country of the Central Provinces (Nagpu

three hospitals and six dispensaries.

The Church of Scotland has also done much to provide education for European children in India. Its two Churche in Bombay have six representatives on the governing body of the Anglo-Scottish Education Society, and the two churches exercise pastoral supervision over the Bombay Scottish Orphanage. In Bangalore there is the St Andrew's High School, and both in Bangalor and in Madras the local congregation support the school for poor children. The Ayrelief Girls' Boarding and High School is under the care of the Kirk-Session of St. Andrew's Church, Simis. The now well-known St Church. Simia. The now well-known St Andrew's Colonial Homes at Kalimpong Bengal, though not directly part of the work of the Church of Scotland, were initiate work of the Church of Scotland, were include by and are being locally managed by mission aries of that Church. The homes exist fo the benefit of the domiciled European Com-munity, and are doing magnificent work There are now twenty cottages, and about 60 children in residence. Further informatio may be found in "Reports of the Schemes of th Church of Scotland," Blackwood & Sons: "Th Church of Scotland Year Book" and "Th Handbook of the Church of Scotland in Indi and Ceylon,"

Though the former Churches of the Unite Free Church now belong to the Church Scotland they remain independent of the est blishment recognised by Government. The have only three purely European congregation in India, two in Calcutta, and one in Bombay.

Wardha, Amraoti); Rajand putana, where the stituted by the Unit the extensive work in United Presbyterian Church now carried on in 1860 is from eleven

The work falls into three main divisions, evangelistic, medical, and educational. The Christian community has been organised in all the chief centres into congregations which form part of the Indian Presbyterian Church, and this Church is seeking to take an increasing share in the work of evangelism. There are nineteen Mission Hospitals, among which are four excellently equipped and staffed Women's

Hospitals, in Madras, Nagpur, Ajmer, and Jaipur. From the days of Duff in Calcutta and Wilson in Bombay the Mission has given a prominent place to education. It has many schools in all parts of its field and it has also made a large contribution to the work of higher contribution to the work of higher reducation through four Christian Colleges.
The Scottish Churches College, Calcutta, is well known. The Madras Christian College, which owes so much to the work of Dr. William Miller, is now under the direction of a Board representing several Missionary Societies. Other Colleges are Wilson College, Bombay, and Hislop College, Nagpur.

THE INDIAN MISSIONARY SOCIETY OF TINNE-VELLY (DORNAKAL MISSION)-Opened in 1903

upwards of 6,500 inmates and is aiding or has some connection with work for lepers at 22 other places in India. Altogether in India over 8,005 lepers are being helped.

The Mission also provides for the segregation of the healthy children of lepers from their diseased parents. More than 800 children are thus being saved from becoming lepers.

An important feature of the work of the Mission is the measure of successful medical treatment whereby early cases both adults and children are now benefiting.

Most of the Mission's income is received from voluntary contributions. Some funds are raised in India, but the bulk of the money expended by the Mission in India is received from Britain, although the provincial Government give regular maintenance grants.

There is an Indian Auxiliary of the Mission to Lopers, of which H. E. Lady Brabourne, who represents the Bombay Presidency, is a Vice-

This Church began its work in India in 1856, at first confining its activities to what is now the United Provinces. From that centre it spreads until the outposts of its work were found in Baluchistan, isurma, Malaysia, Netherlands, Indies and the Philippine Islands. In 1920 a rearrangement of the mission field of the Church separated India, Burma and Baluchistan into what is now known as the Southern Asia division. Within this present field the Church now has a total baptized Christian community of 525,668.

The avowed task of the Church has been the uplift of the depressed classes, and its work has been largely among that class. As a matter of tact, however, it has large numbers who came from the Mohammedans and the caste Hindus, and among such its influence is extending.

The educational work of the Church is extensive, it having in this area a total of 1,100 schools of all grades, including three colleges, twenty-two high schools, and numerous normal fraining and theological institutions. The registered attendants in these schools number 40,000.

Special effort is made for the instruction and development of the young people of the Church there now being 336 chapters of the Epwo th League with 13,394 enrolled members, and 4,021 organized Sunday Schools with an enrolment 139 422.

The publishing interests of the Church are represented by the Lucknow Publishing House at Lucknow doing work in English, Undu Hundi and other Vernaculars. The periodicalisated cover the interests of both the evangulation and the educational field, the Indian Witness, the Junior Methodist and Christian Education being in English, while the Kaukapi-Hind, and other periodicals are said in several of the vernaculars.

The governing body of the Church is the General Conferences held quadrennially in America in which the eleven conferences now existing in India are represented by twenty-four delegates. The polity of the Church in India looks forward to complete independence under the general governing body, there at present being but about two hundred American men and women as compared to 600 ordained and 4,000 unordained Indian and Burmese workers. At present the area is divided into seventy-two districts each in charge of a superintendent and among whom are many Indians. The work is supervised by three Bishops, elected by the General Conference, and residents as follows; Bishop John W. kobinson, Delhi: Bishop Brenton T. Badley, Bombay and Bishop Jashwant Rao Chitambar, Jubbulpore.

THE AMERICAN WESLEYAN METHODIST MISSION, Sanjan, Thana District Headquarters. Stations with Missionaries, Dandi Maroh, via Nargole, District Truma Pardi, District Surat Eight Missionaries on field. Two on fulloughl, Four main stations. Two Boarding schools. One industrial school one Bible School. One village farm project Eight village schools. Chahman of Field Committee, Rev. P. D. Doty, Sanjan, District Thana.

THE METHODIST PROTESTANT MISSION began work in India in 1913, has a staff of six missionaries. The work is confined to Dhulia Taluka, with one Main station, Dhulia. There are two boarding schools, district evangelistic work and medical work Secretary: Mis. Paul Cassen, Dhulia, West Klandesh.

THE FREE METHODIST MISSION of North America—Established at Yeotmal, 1893, operates in Berar with a staff of 11-Missionaries and 40 Indian workers. Organised churches 5, 1 Theological school, 1 Guls' Boarding School, 1 Vennacular Middle school, 8 Elementary Schools, 1 Dispensary and 5 centres for Clinical and village health work.

Secretary: Persis M. Phelps, Yeotmal, Berni.

# THE SALVATION ARMY.

The work of the Salvation Army in India and Ceylon was commenced in 1882 by the late commissioner Booth-Tucker; and was for many terms under his control, with Headquarters in India. For some time now, the areas occupied have been divided for administrative purses into 6 Territories, each under a Territorial commander; and one smaller Command.

Vorthern Territory, with Headquarters at those.

Western Territory, with Headquarters at mbay.

Malras and Telugu Territory, with Headnters at Madras.

outhern Territory, with Headquarters at wandrum, in Travancore State.

Crylon Territory, with Headquarters ombo.

Eastern Territory, with Headquarters cutta.

Burmah Command, with Headquarters at Rangoon.

The Commanders are directly responsible to the International Headquarters in London.

Northern Territory.—The area in this Territory is the Salvation Army work in the Punjab, Delhi and United Provinces. The Territory is controlled from Lahore.

Evangelistic work, especially among the "depressed classes," is extensively carried on, both in the Punjab and the U. P.

A number of Settlements for the reformation of "Criminal Tribes" are under the control of the Salvation Army in the United Provinces (where this important reformative work was commenced), and also in the Punjab, great progress has been made. A special Settlement has also been opened in the Andamans during the last few years.

A land colony 2,000 acres in extent is in existence in the Multan District, where a population of 1,800 centres in the salvation and social tion of 1,800 has been settled. The land will uplift of the people ultimately become the property of the holders.

Medical work is carried on in two Hospitals,

one of which is in the Punjab and the other in the United Provinces; and also in one dis-

Other institutions include, Day and Boarding have recently been commenced. Schools, Weaving Schools, Agricultural Colonics, a Hospital for British Military Soldiers, and Civilians at Delhi

Village centres at which the S. A. 1,776 Works .. . . Officers and Employees . . ٠. 22 Social Institutions

Territorial Headquarters: Ferozepur Road, Lahere, Punjab.

Territorial Commander: Commissioner N Muthiah.

Chief Secretary I.t.-Colonel W. D. Pennick.

Western Territory - The Western Territory comprises Bombay, Gujarat, Panch Mahals and the Maharastra.

Territorial Headquarters The Salvation Army. Morland Road, Byculla, Bombay.

Territorial Commander. Colonel Guana Dasen (Alfred H. Barnett).

Corp. 283; Outposts 259; Societies 478; Social Institutions 16.

Besides the distinctly evangelistic operations, there are established a large General Hospital— Emery Memorial, Anand—and several Inspenses

saries; 222 Day Schools; 4 Boarding Schools; a Home for Juvenile Criminals, Industrial and Rescue Home for Women; conditionally Released Prisoners' Home; the management of the Board Memory Comm. Womber Memory Comm. Womber Memory Comm.

Madras and Telugu Territory.—This Territory comprises the city of Madias and work situated in the Nellore, Guntur, Kistna and West Godavari Districts of the Northern Chrony of the Median Particles Circars of the Madras Presidency.

There are the following agencies at work, viz. places in which work is systematically done, both evangelical and education and social.— 290 Corps and Outposts; 116 village primary schools; 1 Criminal Tribes Settlement, 2 institutions for the training of Officers; 1 Leper Colony at Bapatla taken over by us in 1928, a Women's Industrial Home in Madras; a Boarding Schools for girls, and another for boys of the Salvation Army.

Territorial Headquarters: The Army, Broadway, Madras. G. P.O. Box 206. Colledge.

General Secretary: Brigadier H. H. Rawson. The South India Territory.—The South Kuravanconam, Trivandium, (India) Territory embraces the whole of Travancore which has a population of more than 5,000,000, the work penetrating Cochin State in the North and the Tinnevelly District Chief Secretary: Lieut.-Col of British India in the South,

Definite efforts are being made from more

The erection of two Central Halls; six village Halls and a number of improved Officers' Quarters during recent months have provided increased facilities for service and make for consolidation. Operations in 20 new villages

A highly successful work is conducted in 3 Boarding Schools, where under the guidance of experienced Officers some 150 Boys and Cirls are cared for. Many trained in these schools have become successful Officers and Local 580 Officers.

In nearly 300 Day Schools primary education and religious instruction are given to a large number of children while activities at the English and Vernacular Middle Schools at Nagarcoil, and the English Middle School in Trivandrum are highly appreciated,

Medical work at the Catherine Booth Hospital and 7 Branch Hospitals is attended with increasing success and is of vital importance to the State At the Catherine Booth Hospital a splendid new administrative Block has just been opened by the Hon. Sir C. P. Ramaswamy fyer, Constitutional and Legal Advisor to His Highness the Maharaja of Travancore The Sankaran Thampi Memorial Tuberculosis Block has just been completed, also other extensions which make for more effective service.

Last year more than 12,000 patients were treated at the Catherine Booth Hospital, representing all sections of the Hindu, Mohammedan

Released Prisoners' Home; the management of the Bombay Helpless Beggars' Camp, Weaving Adoor, Cochin State, are happy and show Schools, Factory for the making of Weaving, marked improvement resulting from export Warping and Recling Machines, and a Land treatment State and other visitors have expressionly having a population of about 309 sed then unqualified appreciations of the Salvationists. the Hospital.

> A new Leper Colony is now in course of crection in North Travancore which will meet a very real need in this region.

> An Industrial Department at Nagarcoil, producing lace, fairly and other needlework, continues to function satisfactorily and girls received as boarders and others are benefited. Boarding School boys are taught book-binding at Trivandium Industrial Department.

> Copies of Vernacular 'War Cry' are distri-buted in the Central Prison, Trivandrum, and meetings held weekly are attended with encouraging results.

The Home League has recently been launched and is making a splendid contribution towards Territorial Commander: Colonel Herbert B. the spiritual and social advancement of women and the general home-life of the people.

Territorial Headquarters: The Salvation Army

Territorial Commander: Lieut. Commissioner

Chief Secretary: Lieut.-Colonel Anand Singh (Bowyer).

# Laws and the Administration of Justice.

The indigenous law of India is personal and divisible with reference to the two great classes of the population, Hindu and Mahomedan. Both systems claim divine origin and are in extricably interwoven with religion, and each exists in combination with a law based on custom. At first the tendency of the English was to make their law public and territorial, was to make their law public and territorial, and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780, secure the highest attainable standard of by which Parliament declared that as against a Hindu law and usage, and as against a Mahomedan the laws and customs of the Standard of last m should be applied. The rules of the Shastras and the Koran have been in some is law consolidation and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829; the Indian Slavery Act, 1843; the 10und in the Bengal Sati Regulation Act of 1829; the Indian Slavery Act, 1843; the Caste Disabilities Removal Act of 1850; the Hindu Widows' Remarriage Fct, 1856; and other Acts and Codes. To quote the Imperial Gazetteer, "A certain number of the older English extract watch to English extract the act of the Carlothe English. English statutes and the English common law are to a limited extent still in force in the Preare to a limited extent still in force in the Presidency Towns as applicable to Europeans. while much of the old Hindu and Mahomedan law is everywhere personal to their native fellow subjects; but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary lawiving functions have from time to time been giving functions have from time to time been delegated.

## Codification.

Before the transfer of India to the Crown

of rendered desirable by the enactment of the the English statutes since 1894 on the same subject should form the first duty undertaken by the Committee. Under the conditions resulting from the establishment of the reformed Constitution, increasing importance will attach here-after to the periodical examination and revision of the Statute Book and the Government of India hope that the Committee will take its place as a permanent feature of the legislative machinery of the country.

#### European British Subjects.

Whilst the substantive criminal law is the same for all classes, certain distinctions of pro-cedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that European British subjects should be liable to Before the transfer of India to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessly unwieldy, entangled and confusing." In the first steps toward general codification were taken in 1833, when a Commission was appointed, of which Lord Macaulay was the moving of India announced that they had decided "to spirit, to prepare a penal code. Twenty-two years clapsed before it became law, during subjects in such a way as to remove from the which period it underwent revision from his successors in the Law Membership, and especially by Sir Barnes Peacock, the last Chief Justice of the Supreme Court of Calcutta. Here is the subject of the Supreme Court of Calcutta. Here is the subject of the Supreme Court of Calcutta. Here is the subject of the Supreme Court of Calcutta. Here is the subject of the Supreme Court of Calcutta. Here is the subject of the Supreme Court of Calcutta. Here is the subject of the Supreme Court of Calcutta. Here is the subject of the Supreme Court of Calcutta. Here is the subject of the Supreme Court of Calcutta. Here is the subject of the subject of the Supreme Court of Calcutta. Here is the subject of the subject of the Supreme Court of Calcutta. The subject of the subj be tried for any offences by magistrates of the

for trial before the district magistrate or sessions the subordinate courts. Returns are regularjudge has the right, however trivial be the ly sent to them at short intervals and the High
charge, to claim to be tried by a jury of which
courts are able, by examining the returns, by
not less than half the number shall be Eurosending for proceedings, and by calling for
peans or Americans..... Whilst this change explanations, as well as from the cases that
was made in the powers of district magistrates, come before them in appeal, to keep themselves
the law in regard to other magistrates remained to some extent acquainted with the manner
unaltered." Since 1836 no distinctions of race in which the courts generally are discharging
have here recognized in the civil courts through, their durites have been recognised in the civil courts through- their duties. out India.

After a discussion on this subject in the Legislative Assembly in September 1921, the following motion was adopted:—"That in order to remove all racial distinctions between and American and Europeans who are not British subjects in criminal trials and proceedings and to report on the best methods of giving effect to their proposals." As a result of the mentary provisions were substituted. has in some measure reduced the differences between the trials of Europeans and of Indians

recently High Courts have been constituted for Patna and Rangoon as well. The Judges are appointed by the Crown; they hold office during the pleasure of the Sovereign; at least one-third of their number are barristers, onethird are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for persons who have held cer-Government concerned without prejudice to tain Judicial Offices in India or lawyers qualified the superior power of the Crown.

provision however is subject to the condition Committee of the Privy Council in England, that every European British subject brought The High Courts exercise supervision over all for trial before the district magistrate or sessions the subordinate courts. Returns are regular-

#### Lower Courts.

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates. Every province, outside the Presidency towns, is divided into sessions divisions consisting of one or more districts, and every Indians and Europeans in the matter of the consisting of one or more districts, and even trial and punishment for offences, a committee consisting of one or more districts, and even trial and punishment for offences, a committee consisting of one or more districts, and even and a should be made in the provisions of the Code essions division has a court of session and a should be made in the provisions of the Code essions judge, with assistants if need be. of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmarecommendations of the Racial Distinctions the province. Magistrates' courts are of three Committee the law on the subject was further classes with descending powers. Provision Committee the law on the subject was further classes with descending powers. Provision modified, and by the Criminal Law Amendment is med, and largely utilised in the towns, Act XII of 1923 in place of the old Chapter for the appointment of honorary magistrates; XXXIII (sections 443-463) the new Chapter in the Presidency towns Presidency magistrates XXXIII (sections 443-449) with certain supple- deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

under the Code.

High Courts.

The highest legal tribunals in India are the High Courts of Judicature. These were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the United Provinces and the Punjab superseding the old supreme and Sudder Courts. More has recently High Courts have been constituted for Idea to the United Provinces and the Punjab superseding the old supreme and Sudder Courts. More has repeatedly disclaimed all Jurisdiction as a followed the Punjab superseding the old supreme and Sudder Courts. More has repeatedly disclaimed all Jurisdiction as a followed the punjab superseding the old supreme and Sudder Courts. More has repeatedly disclaimed all Jurisdiction as a followed the punjab superseding the old supreme and Sudder Courts. More has repeated to the punjab superseding the old supreme and Sudder Courts. More has repeated to the punjab supersed the punj Trials before courts of session are Court of Criminal Appeal, there is no adequate machinery for appeal or revision available to persons connected of serious and even capital offences and sentenced by the High Courts in those original or appellate (riminal Jurisdictions, The prerogative of mercy is exercised by the Governor-General-in-Council and the Local

tail Judicial Offices in India or lawyers qualified in India. Trial by jury is the rule in original The constitution and jurisdiction of the criminal cases before the High Courts, but inferior civil courts varies. Broadly speaking juries are never employed in civil suits in one district and sessions judge is appointed for India.

For other parts of India High Courts have its principal civil court of original jurisdiction, have its principal civil court of original jurisdiction. been formed under other names. The chief his functions as Sessions Judge have been dedifference being that they derive their authority scribed. For these posts members of the Indian from the Government of India, not from Parlia-Civil Service are mainly selected though some ment. In Sindh, N. W. F. Province and the appointments are made from the Provincial ment. In Sindh, N. W. F. Province and the appointments are made from the Provincial Central Provinces and Berar the principal legal Service. Next come the Subordinate Judges tribunal is known as the Court of the Judicial Commissioner. Quite recently the Secretary of State for India has approved the proposal for the establishment of a High Court in the Central Provinces and Berar.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final, Towns, where the Chartered High Courts baye except in cases in which an appeal lies to His Majesty in Council and is heard by the Judicial pose of money suits up to Rs. 2,000. As InCourts by the Insolvency Act of 1906.

Coroners are appointed only for the Presidency Towns of Calcutta and Bombay. Elsawhere their duties are discharged by the ordinary staff of magistrates and police officers remainder Indian." Needless to say that this unaided by jurors. unaided by jurors.

### Legal Practitioners.

Legal practitioners in India are divided into isation of the legal profession. Barristers-at-Law, Advocates of the High Court, Vakils and Attorneys (Solicitors) of High Courts, and Pleaders, Mukhtiars and revenue agents. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts; and they alone are admitted to practise on the original side of some of the chartered High Courts. Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England. The rule that a solicitor must instruct counsel prevails only on the original side of the Bombay and Calcutta High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Courts.

### Organisation of the Bar.

At Calcutta, Madras, and Bombay there is a Bar Committee presided over, ex-officio, by the Advocate-General. This body is elected by the barristers practising in each High Court, and its functions are to watch the interests of the Bar and to regulate its cliquette. At Allahabad, Lahore, Nagpore, and Rangoon a similar Bar Committee exists, but the electrate is extended to include the vakila or native pleaders, and the president is either the senior practising member of the Bar or the Government Advocate. In the larger Districts and Sessions Courts, an organisation representing sions Courts, the Bar is usually to be found, and in the sub ordinate Courts, including the Revenue Courts similar machinery is generally in use. Pending an opportunity of detailed inquiries in India, these general descriptions must suffice. The recommendations of the Indian Bar Committee of 1923 relating to the constitution of Bar Councils for the several High Courts in India Councils Act, XXXVIII of 1926. The aim and purpose of this Act is to abolish, as far as practicable the distinctions between the various classes of legal practitioners and promote the creation of a uniform Bar.

#### Composition of the Bar.

A considerable change is occurring in the composition of the Indian Bar. The following extract from an informing article in the Times (May 25, 1914) indicates the character and incidence of this development. "During the

solvency Courts the chartered High Courts of ed to the Bombay High Court in 1871 there Calcutta, Bombay and Madras have jurisdiction were 33 solicitors, of whom 10 were Indian in the Presidency towns. In the mofusiil and 28 English, and 12 4 advocates, of whom similar powers were conferred on the District 7 were Indian and 17 English. In 1911, attached to the same High Court, there were 150 solicitors, of whom more than 130 were Indian and the remainder English, and 250 advocates, of whom 16 only were English and the the 20 years that have clapsed since 1914, both in the direction of expansion and of Indian-

#### Law Officers.

The Government of India has its own law colleague in the Legal Member of Council. all Government measures are drafted in this department. Outside the Council the principal law officer of the Government of India is the Advocate-General of Bengal, who is appointed by the Crown, is the leader of the local Bar, and is always nominated a member of the Provincial Legislative Council. In Calcutta he is assisted by the Standing Counsel and the Government Solicitor. There are Advocates-General appointed by the Crown and Government Solicitors for Bombay and Madras, and in Bombay there is attached to the secretariat a Legal Remembrancer and an Assistant Legal Remembrancer, drawn from the Judicial Branch of the Indian Civil Service. The Government of Bengal consults the Bengal And convernment of Bengal consults the Bengal Advocate-General, the Standing Counsel and the Government Solicitor, and has besides a Legal Remembrancer (a Civil Bervant) and a Deputy Legal Remembrancer (a practising barrister); the United Provinces are equipped with a Civilian Legal Personnessens and practising the second with a civilian Legal Remembrancer and professional lawyers as Government Advocate and Assistant Government Advocate; the Punjab has a Legal Remembrancer, Government Advocate and a Junior Covernment Advocate; and Burma a Government Advocate, besides a Secretary to the Local Legislative Council. Under the Government of India Bill it is proposed to appoint an Advocate-General for each of the more important provinces.

Sheriffs are attached to the High Courts of Calcutta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy sheriffs, who are officers of the Court.

#### Law Reports.

The Indian Law Reports are now published In seven series—Calcutta, Madras, Bombay, Allahabad, Patna, Lahore and Rangoon under the authority of the Governor-General-in-Council. They contain cases determined by the High Court and by the Judicial Committee on appeal from the particular High on the Times Court. These appeals raise questions of very character and great importance, and the Council of Law "During the Reporting for England and Wales show their last forty years, a striking change has taken appreciation by printing the Indian Appeals place in the professional class. The bulk of in a separate volume, and have also compiled practice has largely passed from British to a digest of Indian Appeals covering the period Indian hands, while, at the same time, the 1874-1893. The other Provinces and States profession has grown to an enormous extent, have series of reports issued under the authority One typical illustration may be quoted. Attach- either of the Judiciary or the State.

Legislative Power.

The supreme power of Parliament to legislate for the whole of India cannot be questioned in practice, however, this power is little used, there being a majority of officials on the Imperial Legislative Council—a majority deliberately reserved in the India Councils Act of 1909—the Secretary of State is able to impose his will on the Government of India and to secure the passage of any measure he may frame, regardless of the opinion of the Indian authorities. Legislative Councils have been establed both for the whole of India and for the

### THE INDIAN POLICE.

Origins.—Cornwallis was the first Indian administrator to take the burden of policing the country off the zemindars and to place it on Government. He ordered the District Judges of Bengal in 1793 to open a Thana (Police Station) for every 400 square miles of their jurisdiction, and to appoint stipendiary Thanadars (Police Station Officers) and subordinates.

In Madras in 1816, Sir Thomas Munro took superintendence of police out of the hands of the sedentary judges and placed it in the hands of the peripatetic Collector, who had the indigenous village police system already under his control. In this way the Revenue Department controlled the police of the districts and still to some extent does so, especially in Bombay Presidency.

In Khandesh from 1826-36 Outram of Muthny fame showed how a whole time military commandant could turn incorrigible marauders into excellent police; and Sir George Clerk, Governor of Bombay in 1848, applied the lesson by appointing full-time European Superintendents of Police in many Districts.

Madras had a torture scandal in 1853 which showed that 3 Collectors had no time for real police superintendence; in 1859 the principle of full-time European superintendence was introduced in a Madras Act of that year and the control of the Collector was removed.

The Muthy led to general police overhaul and retrenchment and the Madras Act was mainly followed in India Act V of 1861, "A Act for the Regulation of Police", which still governs police working everywhere in India except Madras and Bombay, which has its own Police Act (IV of 1890).

Working.—Strictly speaking there is no Indian Police. With the doubtful exception of the Delhi Imperial Area Police, and the advisory staff of the Intelligence Bureau attached to the Home Department, the Government of India has not a single police officer directly under its control. The police provided for by the 1861 Act is a provincialised police, administered by the Local Government concerned, subject only "to the general control" of the Governor-General.

Within the Local Government area the police are enrolled and organised in District forces, at the head of each of which is a District Superintendent of Police with powers of enlistment and dismissal of constabulary; and Police Station Officers may also be dismissed by the D.S.P.

The D. S. P. is subject to dual control. The force he commands is placed at the disposal of the District Magistrate for the enforcement of lawand the maintenance of order in the District. But the departmental working and efficiency of the force is governed by a departmental hierarchy of Deputy Inspector-General of Police, Inspector-General of Police, and Home Department. Generally speaking, the D. S. P. has to correspond with his District Magistrate on judicial and magisterial topics, and with his departmental chiefs on internal working of his force.

The C. I. D.—The Curzon Police Commission of 1902-3 modernised police working by providing for the direct enlistment and training of Educated Indians as Police Station Officers, and by creating specialised police agencies under each Local Government for the investigation of specialist and professional crime. These agencies are known as Criminal Investigation Departments and work under a Deputy Inspector-General. They collate information about crime, edit the Crime Gazette, take over from the District Police crimes with ramifications into several jurisdictions, and they control the working of such scientific police developments as the Finger Print Identification Bureaux.

Headquarters and Armed Police.—At the chief town of each District the D. S. P. has his office and also his Headquarter Police Lines and parade ground. This is the main centre for accumulation and distribution to the Police Stations and Outposts of the District of clothing, arms, ammunition, and accountements. Here are the Stores and the Armoury. Here also constabulary recruits enlisted by the D. S. P. are taught drill, deportment, and duties and are turned out to fill vacancies. The Headquarter Lines also contain the two hundred or so armed police who mount guard on Treasuries in the District, and also provide prisoner and treasure escort. Actually they form a small and mobile local army equipped with muskets (single loading) and bayonets. The most highly trained section of them go through a musketry course and are armed with 303 service rifles. At most head-quarters, but by no means all, there is also a reserve of mounted and armed police.

Thanas and Thanadars.—Almost throughout India the popular terms for Police Station and Police Station Officer are "Thana" and "Thanadar." It is at the Police Station that the public are most in touch with the police and the police are instead in the terminal thanadar. The public with the public whether it be in a large city or in a moiussil hamlet the Thana is the place where people come with their troubles and their grievances against their neighbours or against a person or persons unknown. In dealing with such callers, the Thanadar, who like police of all ranks, is supposed to be always on duty, is chiefly guided by the Fourteenth Chapter of the Code of Criminal Procedure, and the Second Schedule at the end of that Code. This schedule shows nearly all penal offences and states whether or not they are "cognisable by the police." The fourteenth Chapter lays down that a cognisable complaint must then and there be recorded, visited, and Investigated. A non-cognisable complaint is merely noted in a separate book and the complainant is told to go to court.

Police Prosecutors.—The complainant in a cognisable case not only has his complaint recorded but investigated without payment of fee. If the Thanadar succeeds in establishing a prima facte case against the accused, the prosecution in court is conducted free of charge by a police prosecutor, who is generally a junior pleader, engaged by Government to conduct police cases in the lower courts. Cases committed

to the Sessions are conducted by the Public Prosecutor or one of his Assistants, and the reports of these officers and the comments of the judge are a means for the D.S. P. to know whether his Thanadars are doing their work properly.

Out Posts.—When the Police Commission of 1860 devised the plan of police that still holds of 1860 devised the plan of police that still holds the field, they laid down two criteria of the numbers required. One was one policeman per square mile; the other was one per thousand of population. In towns it is well enough to have the available police concentrated at the police station. But in the mofussil the Thana is very often fifty miles distant from portions of its jurisdiction. It is in such cases profitable to detach a portion of the police station strength to detach a portion of the police station strength under a head constable to man an outpost where complaints can be received and investigation begun without the injured party having to undertake a long journey to the distant Thana The secret of good mofussil police working in normal times is dispersion. A single policeman, however junior, represents the rule of law and is an agent of Government.

The Chain of Promotion .- Ordinarily the constable may aspire to become a jamadar, or with ability and luck, a Police Station Officer or even Inspector. The directly recruited matriculate who comes in through the Police Training School as a Thanadar may ordinarily become an Inspector or a Deputy Superintendent, or exceptionally a Superintendent. The direct Deputy, an office reserved for Indians, has a good chance of becoming Superintendent, has a good chance of becoming Superintendent, and perhaps Deputy Inspector-General. The direct Assistant Superintendent, whether from lingland, or from India, is sure of a Superintendentship, and has chances of D. I. G. after 25 years' service. The period of service for all ranks for full pension is thirty years, and if an officer dies in the process of earning full pension his pension dies with him and all his dependents got his pensioned and the pendents and the pendents are the pendent services. get his provident fund.

and efficiency.

The Commissioner of Police of a Presidency Town is not the subordinate of the Provincial Inspector-General of Police and he deals direct with Government, just as the Presidency Magistrates deal directly with the High Court. The Criminal Procedure Code of India is supersed. ed in the Presidency Towns by special police Acts which prescribe police procedure. Justice in criminal cases in Presidency Towns is somewhat rough and ready, not only from this cause, but also because Presidency Magistrates can give upto six months or Rs. 200 fine summarily, the without formal recording. i.e., without formal record of proceedings; and if only whipping or fine up to Rs. 200 is inflicted there need be not even any statement of reasons for the conviction.

Round Figures .- The process of reorganisation and retrenchment goes on ceaselessly, annual administration reports for the ten major provinces and four minor administrations appeared tardily, and there are no unified statistics for the police of India and Burma. The following figures are therefore merely to be regarded as approximations, giving a general idea of the numbers of police and the volume of work put through yearly:—There are about 25,000 Military Police, chiefly in Burma, Assam, and Bengal, and these cost about one crore. The maintenance of them is a departure from the principles laid down by the 1860 Commission and the 1861 Act.

Provincial Police including Burma total about 200,000 and cost eleven and a half crores or an average of over one crore per major Province.

There are about 10,000 Thanas or Police Stations which annually investigate from five to six thousand murders, four thousand dacoities, twenty-five thousand cattle thefts, one hundred and seventy thousand ordinary thefts and as many burglaries. They place on trial every year about three-quarters of a million persons, of whom about half a million or more are convicted. Presidency Police.—In the Presidency The jail population of India, which is over a Towns there is unified police control for the Provided Commissioner is responsible for both who on release proceed to prey on the public law and order and for departmental training until such time as the police again secure their conviction and incarceration.

## STATISTICS OF POLICE WORK.

The undestrability of attaching undue importance to statistical results as a test of the ments of police work was a point upon which considerable stress was laid by the Indian Police Commission, who referred to the police carry out that important branch of evils likely to result from the prevalence among subordinate officers of an impression that the advancement of an officer would depend upon his being able to show a high ratio of convictions, both to cases and by the figures below may be given as some persons arrested, and a low ratio of crime. These considerations have been emphasized in recent orders of the Government of undua. Subject to these observations, the figures below may be given as some persons arrested, and a low ratio of crime. The objection applies more particularly to the use of statistics for small areas; but they the conditions and the statistical results in cannot properly be used as a basis of comparison even for larger areas without taking

## JAILS.

Jail administration in India is regulated generally by the Prisons Act of 1894, and by rules issued under it by the Government of India and the local governments. The punishments authorised by the Indian Penul Code for convicted offenders include transportation, penal servitude, rigorous imprisonment (which may include short periods of solitary confinement), and simple imprisonment. Accommodation has also to be provided in the jails for civil and under-trial prisoners.

The origin of all jail improvements in India in recent years was the Jail Commission of 1880. The report of the Commission, which consisted of only two members, both officials serving under the Government of India. is extremely long, and reviews the whole question of jail organization and administration in the minutest detail. In most matters the Commission's recommendations have been accepted and adopted by Local Governments, but in various matters, mainly of a minor character, their proposals have either been rejected ab initio as unsuited to local conditions, abandoned as unworkable after careful experiment or accepted in principle but postponed for the present as impossible.

The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report, is that there should be in each Presidency three classes of jails: in the first place, large central jails for convicts sentenced to more than one year's imprisonment; se-condly, district jails at the headquarters of districts; and, thirdly, subsidiary jails and "lock-ups" for under-trial prisoners and convicts sentenced to short terms of imprisonment. The fail department in each province is under the control of an Inspector-General; he is generally an officer of the Indian Medical Service with jail experience, and the Superin-rendents of certain jails are usually recruited from the same service. The district jail is under the charge of the civil surgeon, and is frequently inspected by the district magistrate. The staff under the Superintendent includes, in large central jalls, a Deputy Superintendent to super vise the jail manufactures, and in all central and district jails one or more subordinate medical officers. The executive staff consists medical omeers. The executive staff consists of jailors and warders, and convict petity officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour. A Press Note issued by the Bombay Government in October, 1915, says.—"The cadre and emoluments of all ranks from Warder to Superintendent, have been repeatedly revised and intendent have been repeatedly revised and altered in recent years. But the Department is not at all attractive in its lower grades. The two weak spots in the jail administration at the moment are the insufficiency of Central Prisons and the difficulty of obtaining good and sufficient warders."

The Jails Committee,—Since the introduction of the reformed constitution the maintesphere of provincial Governments and is subject among the prisoners, for which purpose paid

to all India legislation. The obvious advisability of proceeding along certain general lines of uniform application led lately to the appointment of a Jalls' Committee, which conducted the first comprehensive survey of Indian prison administration which had been made for thirty years. Stress was laid by the Committee upon the necessity of improving and increasing epoin the necessity of improving and increasing existing pail accommodation; of recruiting a better class of warders; of providing education for prisoners; and of developing prison industries so as to meet the needs of the consuming Departments of Government. Other important recommendations included the separation of the different properties. ration of civil from criminal offenders; the adoption of the English system of release on license in the case of adolescents; and the creation of children's courts. The Committee found that the reformative side of the Indian system needed particular attention. They recommended the segregation of habituals from ordinary prisoners; the provision of separate accommodation for prisoners under trial; the institution of the star-class system; and the abolition of certain practices which are liable to harden or degrade the prison popula-

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jail walls, but extra-mural employment on a large scale is sometimes allowed, as, for example, when a large number of convicts were employed in excavating the Jhelum Canal in the Punjab. Within the walls prisoners are employed on jail service and repairs, and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multifarious employment being condemned, while caro is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments, and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles; the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian iail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence, In a large majority of cases the punishment inflicted is one of those classed as "minor." Among the "major" punishments fetters take the first place. Corporal punishment is inflicted in relatively few cases, and the number is steadily falling. Punishments were revised as the result of the Commission of 1889. notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torture Punish. ments are now scheduled and graded into major duction of the reformed constitution the mainte-nance of the Indian Prisons falls within the blems is the internal maintenance of order warders and convict warders are employed. Indian Year Book, 1922 (pages 670-671). A With this is bound up the question of a special number of reforms were advocated but, owing class of well-behaved prisoners which was tried from 1905 on wards in the Thana Jail.

Juvenile Prisoners.—As regards "youthful offenders"—i.e., those below the age of 15—the law provides alternatives to imprisonment, and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with other-wise. The alternatives are detention in a reformatory school for a period of from three to seven years, but not beyond the age of 18; discharge after admonition; delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit; and whipping by way of school. discipline.

The question of the treatment of "young adult" prisoners has in recent years received much attention. Under the Prisons Act, prisoners below the age of 18 must be kept separate from older prisoners, but the recognition of the principle that an ordinary jall is not a fitting place for adolescents (other than youthful habituals) who are over 15, and therefore in cligible for admission to the reformatory school. for going beyond this by treating young adults seeing that a prisoner fulfils the conditions on the lines followed at Borstal, and considerable which he was released should not be imposed looked. 1905, a special class for selected juveniles and voung adults was established at the Dharws young adults was established at the Diarway pai to Bombay; in 1908 a special juvenile jail was opened at Alipore in Bengal; in 1909 the Meiktila jail in Burma and the Tanjore iail in Madras were set aside for adolescents, and a new jail for juvenile and "juvenile adult" convicts was opened at Barelly in the United Provinces; and in 1910 it was decided to con-custiate adolescents in the Punjab at the Lahore District jall, which is now worked on Borstal lires. Other measures had previously been taken in some cases; a special reformatory system for "juven le adults" had, for example, system for "liven.le adults" had, for example, been in force in two central jails in the Punjah since the early years of the decade, and "Borstal enclosures" had been established in some jails in Bengal. But the public is slow to appreciate that it has a duty towards prisoners, and but little progress has been made in the tormation of Prisoners' Aid Societies except in Bombay and Calcutta, though even in those cities much remains to be done.

Reformatory Schools.—These schools have been administered since 1899 by the Education department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employ-ment on leaving school, and as far as possible to keep a watch on their careers.

Transportation.-Transportation is an old punishment of the British Indian criminal law, and a number of places were formerly appointed for the reception of Indian transported convicts. The only penal settlement at the present time is Port Blair in the Andaman Islands.

Commission of Enquiry, 1919.—A comnittee was appointed to investigate the whole system of prison administration in India with by their presence. special reference to recent legislation and experience in Western countries. Its report, cess in dealing with the criminal tribes is the published in 1921, was summarised in the provision of a reasonable degree of economic

to financial stringency, it has not yet been possible to introduce some of the more important of them.

Fines and Short Sentences.—Those sections of the Indian Penal Code, under which imprisonment must be awarded when a convicion occurs, should be amended so as to give discretion to the court. Sentences of imprisonment for less than twenty-eight days should be prohibited.

The Indeterminate Sentences.—The sentence of every long-term prisoner should be brought under revision, as soon as the prisoner has served half the sentence in the case of the non-habitual, and two-thirds of the sentence in the case of the habitual, remission earned being counted in each case. The revision should being counted in each case. The revision should be carried out by a Revising Board, composed of the Inspector-General of Prisons, the Ses-sions Judge and a non-official. In all cases, the release of a prisoner on parole should be made subject to conditions, breach of which would render him liable to be remanded to undergo upon the police or upon the village headman, but special officers, to be termed parole officers, should be appointed for the purpose. These parole officers should possess a good standard of education, though not necessarily a university degree, and should both protect and advise the released prisoner and report breaches of the conditions of release.

Transportation and the Andamans.—The future of the penal settlement of Port Blair was continually under the consideration of the Government of India from the time of the publication of the Jails Commission report, but it was not till 1926 that a definite decision was reached. It was then decided that henceforth only those convicts should normally be sent to the Andamans who voluntered to come, that the old restrictions on life in the settlement should be sensibly relaxed, that convicts should be encouraged to settle on the land, that in certain conditions they should be entitled to rickase to obtain occupancy rights over the land which they had cultivated, and that the importation of wives and families should be encouraged. The object of these changes was to promote the development of a free colony of persons, who would, after the terms of their sentences had expired, make the Andamans their permanent home. The effect up to date has been to introduce a completely new outlook on life into the settlement, but it is still too soon to appreciate its potentialities. It has recently been found necessary to send to the Andamans certain convicts either sentenced to transportation for life or to long terms of rigorous imprisonment for permanent incarceration in the Cellular Jail. Such prisoners will not be

comfort for the people. It is therefore of paramount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first as- private agency for the control of settlements.

certaining whether there is work for them. Commitment to settlements should, as far as possible, be by gangs not by individuals. It is desirable to utilise both Government and

The variations of the jail population in British India during the five years ending 1932 are shown in the following table:—

	1932	1931	1930	11 29	1928
Jail population of all classes on 1st January Admissions during the year	154,871 896,876	163,298 739,840	137,129 771,187	140,142 598,568	136,424 585,206
Aggregate	1,051,747	903, 138	908,316	738,710	721,630
Discharged during the year from all causes	DOFATA	748,266	744,946	601,581	581,512
Jail population on 31st December	165,797	154,872	163,370	137,129	140,118
Convict population on 1st January	126,580	136,552	115,184	118,970	116,161
Admissions during the year	267,239	207,568	223,538	167,697	167,013
Aggregate	393,819	344,120	339,722	286,667	283,174
Released during the year Transported beyond seas Casualties, &c	1,492	216,807 1,685 2,503	196,996 1,599 2,541	163,796 1,821 2,514	160,375 566 2,497
Convict population on 31st December	139,708	126,580	136,552	116,187	118,790

More than one-half of the total number of convicts received in jails during 1932 came from the classes engaged in agriculture and cattle tending, about 190,000 out of 267,000 were returned as illiterate.

The percentage of previously convicted prisoners fell from 14 to 12, while the number of youthful offenders rose from 480 to 1,024. The following table shows the nature and length of sentences of convicts admitted to iails in 1930 to 1932 -

Nature and Length of Sentence.	1932	1931	1930
Not exceeding one month  Above one month and not exceeding six months.  , six months , , one year  , one year , , five years  ### Exceeding ten years	43,196	39,284	35,773
	120,656	89,647	109,714
	54,253	39,373	40,878
	38,673	30,584	29,950
	5,598	4,740	3,935
	705	575	533
Transportation beyond seas—  (a) for life	2,348	1,933	1,592
	94	100	37
	1,648	1,331	1,126

The total daily average population for 1932 was 144,004, the total offences dealt with by criminal courts was 310, and by Superintendents 97,736. The corresponding figures for 1931 were 121,900; 195 and 114,545, respectively.

The total number of corporal punishments showed a slight increase, viz., from 174 to 190. The total number of cases in which penal diet (with and without cellular confinement) was prescribed was 4,669 as compared with 3,684 in the preceding year.

expenditure increased Total Rs. 1,75,48,041 to Rs. 1,77,91,758, while total cash earnings decreased from Rs. 25,72,343 to Rs. 24,01,285; there was consequently an increase of Rs. 4,14,735 in the net cost to Government.

The death rate decreased from 12.42 per mille in 1931 to 10.19 in 1932. The admissions to hospital were higher, and the daily average number of sick fell from 23.73 to 23.12.

- 1. The Indian Tariff (Amendment) Act.— on behalf of the shareholders on the various During the past year certain industries which registers; and (4) one Government Official nominated by the Governor General in Council. under normal conditions could not fulfil the conditions prescribed by the Indian Fiscal Commission for the grant of substantive protection were subjected to competition of an exceptional nature which proved a menace to their continued existence. The present Act affords assistance to each of the following industries by the imposition of minimum specific duties applicable against all countries. The industries concerned are: Fish oil, sugar-candy, heavy chemicals, cotton hosiery, glass globes and chinneys, paints, soap, enamelled ironware, electrical earthenware and porcelain, domestic earthenware, lead pencils, parasols and sun-shades, tiles, cast iron pipes and woollen hosiery and tabrics.
- 2. The Reserve Bank of India Act.—The Federal Structure Sub-Committee of the first Round Table Conference recommended the establishment of a Reserve Bank for India for the management of Indian Currency and Exchange. In the report of the Financial Safeguards Commutee of the third Round Table Conterence it was placed on record that "the Secretary of State undertook that representative Indian opinion would be consulted in the preparation of proposals for the establishment of the Reserve "ank including those relating to the reserves." A representative committee was set up in order to give effect to that undertaking. The present Act follows the recommendations of that Committee.
- S. 3 provides for the establishment and incorporation of the Reserve Bank of India for the purpose of taking over the management of the currency from the Governor General in Council and of carrying on the business of banking in accordance with the provisions of this Act. S. 4 deals with share capital, share registers, shareholders and the manner of allotment of shares. The share capital of the Bank will be five crores of rupees divided in shares of one hundred rupees each. Separate registers of shareholders will be maintained at Bombay, Calcutta, Delhi, Madras and Rangoon. Bombay, Calcutta, Delli, Madras and Rangoon. A shareholder will be qualified to be registered as such in any area in which he is ordinarily resident or has his principal place of business but no person will be registered as a shareholder in more than one register. Under ss. 7 and 8 the general superintendence and direction of the affairs and business will be entrusted to a Central Reart of Directors consisting of (1) a Covernor.

The Governor and a Deputy Governor may hold office for a term not exceeding five years as the Governor General in Council may fix when appointing them, and is eligible for re-appointment. A nominated or elected Director holds office for five years. S. 9 provides for the constitution of Local Boards for each of the five areas specified in the First Schedule, namely, the Western area served by the Bombay Register, the Eastern area served by the Calcutta Register, the Northern area served by the Delhi Register, the Southern area served by the Madras Register and the Burma area served by the Rangoon Register A Local Board will consist of five members elected from amongst themselves by the shareholders who are registered on the register for that area and not more than three members nominated by the Central Board from amongst the shareholders registered on the register for that area. The elected members of a Local Board must elect from amongst them-selves one or two persons to be Directors representing the shareholders on the register for the area for which the Board is constituted. A Local Board must advise the Central Board on such matters as may be referred to it and must perform such duties as the Board may by regulations delegate to it. S. 13 provides for meetings of the Central Board which must be convened by the Governor at least six times in each year and at least once in each quarter. Any three Drectors may require the Governor to convene a meeting of the Central Board at any time. The Governor, or in his absence the Deputy Governor authorised by the Governor to vote for him, must preside at meetings of the Central Board, and in the event of an equality of votes has a second or casting vote. S. 17 enumerates the various kinds of business which the Bank may transact. Under S. 20 the Bank has the sole right to issue bank notes in British India, and may, for a period fixed by the Gover-nor General in Council on the recommendation of the Central Board, issue currency notes of the Government of India supplied to it by the Governor General in Council. S. 30 empowers the Governor General in Council to supersede the Central Board if in his opinion the Bank fails to carry out any of the obligations imposed on it by or under this Act and thereafter the general superintendence and direction of the affairs of the Bank will be entrusted to such agency as Board of Directors consisting of (1) a Governor the Governor General in Council may determine.

and two Deputy Governors, to be appointed by the Governor General in Council may determine. When action is taken under this section the Directors, to be nominated by the Governor General in Council must cause a full General in Council; (3) eight Directors elected action and of the action taken to be laid before the Governor General in Council may determine. When action is taken under this section the Governor General in Council must cause a full

from the issue of the notification superseding the

- 3. The Imperial Bank of India (Amendment) Act.—It was recognised, since the plan of setting up a Reserve Bank for India was first considered, that, with the transfer to a Reserve Bank of the purely central banking functions which are at present performed by the Imperial Bank of India, the latter should be freed from some of the restrictions which are at present imposed upon it. The present Act secures this by amending the Imperial Bank of India Act, 1920. It modifies the control of the Governor General in Council over the management of the Bank, removes certain restrictions on the transaction of business by the Bank and provides for an agreement between the Bank and the Reserve Bank of India. S. 3 of the present Act by repealing s. 9 of the original Act removes the limitation on the business which the Bank may transact at its London office and s. 5 empowers the Bank to open branches outside India, in London and elsewhere. S. 4 authorises the Bank to enter into an agreement with the Reserve Bank of India to conduct Government business as agent of the Reserve Bank. S. 12 substitutes a new section for s. 28 of the original Act regarding constitution of the Central Board. The number of Directors to be nominated by the Governor General in Council is reduced from four to two. The right of the Governor General in Council to appoint the Controller of the Currency to be a member of the Central Board is removed. The Governor General in Council must nominate an officer of Government to attend the meetings of the Central Board and to take part in its deliberations but without any right to vote on any question arising at any meeting.
- 4. The Wheat Import Duty (Extending) Act.— The present Act extends the life-time of the Wheat (Import Duty) Act. 1931, so as to continue the existing duties on wheat and wheat flour for a further period of one year, viz., up to the 31st March 1935.
- 5. The Indian Medical Council (Amendment)
  Act—S. 2 of the present Act makes the Rangoon
  University a British Indian University within
  the meaning of s. 2 (a) of the Indian Medical
  Council Act, 1933, and enables persons enrolled
  in the Provincial Medical Register of Burma in the Provincial Medical Register of Burma and possessing medical qualifications granted by the University, to exercise the privilege of participating in an election to the Council under s. 3 (1) (c) of the Original Act. 8. 3 enables the Council of the University to elect one member from amongst the members of the Board of Studies in medicine to the Indian Medical Council, under s. (1) (b) of the Act.
- 6. The Cotton Textile Industry Protection (Ameadment) Act.—This Act continued the protection granted to the industry by the Cotton Textile Industry (Protection) Act, 1930, as subsequently amended, for a further period up to the 30th April, 1934.
- 7. The Steel and Wire Industries Protection (Extending) Act.—This Act continues the protection granted to the industry by the Steel Industry (Protection) Act 1927, as subsequently

- the Central Legislature at the earliest possible amended, the Wire and Wire Nail Industry opportunity and in any case within three months from the issue of the notification superseding the Board.

  3. The Inversal Rank of India (Amendment)
  - 8. The Khaddar (Name Protection) Act.—
    This Act regulates the use of the words
    "Khaddar" and "Khadi" when applied as a
    trade description of woven materials. Under
    s. 2 these words when applied to any woven
    material are deemed to be a trade description
    within the meaning of the Indian Merchandise
    Marka Act 1880 indicating that such material Marks Act, 1889, indicating that such material is cloth woven on hand-looms in India from cotton yarn handspun in India.
  - 9. The Indian Finance Act.—This Act continues for a further period of one year certain duties and taxes imposed under the Indian Finance Act, 1933. Ss. 2, 5 and 6 provide for the continuance for a further period of one year of the existing provisions regarding salt duty, rates of income-tax and super-tax and the credit to revenue of interest on securities forming part of the Paper Currency Reserve. S. 3 provides for a uniform duty of 25 per cent. ad valorem and in addition either eight rupees and two annas per thousand or three rupees and four annas per pound whichever is higher. The import duty on manufactured tobacco is raised by rupee one and annas four per pound; the standard rate of duty will thus be Rs 3-4-0 the standard rate of duty will thus be Rs 3-4-0 per pound and the preferential rate for British Colonies Rs. 2-12-0 per pound. Under s. 3 the import duty on silver is reduced to sive annas per ounce without any surcharge. Section 3 (1) abolishes the export duty on hides S. 4 reduces the postage on letters not exceeding half a tola in weight from one anna and three pies to one anna and increases the uninnum ples to one anna and increases the minimum charge on book, pattern and sample packets from half an anna to nine pies. S. 7 provides for the reduction of the excise duty on silver corresponding to the reduction in import duty.
  - 10. The Salt Additional Import Duty (Extending) Act.—This Act gives effect to the recommendation made by the Salt Industry Committee of the Legislative Assembly by extending the life of the Salt (Additional Import Duty) Act 1001 for a further pured of thursage. Duty) Act, 1931, for a further period of thirteen
  - 11. The Indian States (Protection) Act.-The forthcoming constitutional changes make it desirable that the authorities in British India should have power to protect units of the Federation from agitation directed against them from British India. Such agitation may involve (1) attacks in the press, (2) the organiza-tion of the actitivities directed against State authority, and (3) the organization of move-ments for the entry into a State of bodies of persons from British India. The present Act affords protection against such activities to the Administration of States in India which are under the sugarainty of His Malesty under the suzerainty of His Majesty.
  - S. 2 prescribes punishment which may extend to imprisonment for seven years for a conspiracy to overswe by means of criminal force the Administration of a State in India. S. 3 provides for protection against attacks in the press which bring into hatred or contempt or excite disaffection towards the administration

established in any State in India. Statements of facts made without any malicious intention and without attempting to excite hatred, contempt or disaffection are exempt from the operation of this section. S 4 empowers a District Magistrate or in a Presidency-town the Chief Presidency Magistrate to prohibit within a specified area the assembly of five or more persons when he is of opinion that attempts are being nade within his purisdiction to promote assemblies of persons for the purpose of proceeding from British India into the territory of a State in India and that the entry of such persons into the said territory is likely to cause obstruction to the administration of the said State.

Tariff (Textile Protection) Amendment Act.—By the Cotton Textile Industry (Protection) Act, 1930, the Indian industry was given a temporary measure of protection In accordance with the undertaking given when the Act was passed, the claims of the industry to substantive protection were examined by a Tariff Board The Tariff Board found that the Indian cotton textile industry had established a claim to substantive protection, but the Government of India, while accepting this conclusion, have found it necessary to review the measures of protection recommended by the Tauff Board in the light of events subsequent to the submission of its report—the denunciation of the Indo-Japanese Convention and the subsequent conclusion of a new trade agreement with Japan together with the unofficial agreement between representatives of the Indian and the United Kingdom textile industries. The present Act gives statutory effect to these agreements The Act also incorporates the decisions of the Government of India on the recommendations of the Tariff Board appointed to investigate the claims of the sericultural industry to protection

13. The Trade Disputes (Extending) Act.— The Trade Disputes Act, 1929, expired on the 7th May, 1934. The present Act converts it into a permanent measure.

14. The Sugar (Excise Duty) Act.—This Act provides for the imposition and collection of an excise duty on sugar produced in factories in British India. S. 2 is concerned with defini-tions. "Khandsari sugar" is defined as sugar in the manufacture of which neither a vacuum pan nor a vacmim evaporator is employed and "palmyra sugar" is sugar manufactured from jaggery obtained by boiling the juice of the palmyra palm. 8–3 provides for the imposition of an excise duty on sngar at the following rates, namely '-(1) on Khandsari sugar at the rate of ten annas per cwt; (2) on all other sugar except palmyra sugar at the rate of one rupee and five annas per cwt., (3) on palmyra sugar at such rate as may be fixed by the Governor General in Council S. 4 deals with the recovery of duty with penalty for non-payment of duty 8 6 empowers the Governor General in Council to impose a customs duty on sugar brought into

information, is imprisonment which may extend to six months, or fine which may extend to two thousand rupees. S 9 empowers the Courts to order forfeiture of sugar in respect of which an offence under this Act has been committed. 8 11 empowers the Governor General in Council to make rules to carry into effect the purposes and objects of this Act The Governor General in Council may delegate all or any of his powers under this section to a Local Government

15. The Sugar-cane Act.—This Act enables Provincial Governments to apply schemes for enforcing a minimum price for cane to be paid by the factory to the grower. This is consequential upon the imposition of an excise duty on factory sugar As mutative in the matter of flxing prices for cane must be left to Provincial Governments so as to suit local conditions, s 13 of the Act provides that it comes into force in any province on such date as the Local Government may direct Under s, 3 (1) the Local Government may by notification declare any area specified in the notification to be a controlled area for the purposes of this Act Under clause (2) of the same section, the Local Government may by notification, subject to the control of the Governor General in Council, fix a minimum price for the purchase in any controlled area of sugar-cane intended for use in any factory Under s 4 not less than thirty any factory Under s 4 not less than thirty days before the issue of any notification under s 3, the Local Government must publish in the local official Gazette a draft of the proposed notification specifying a date on or after which the draft will be taken into consideration, and must consider any objection or suggestion which may be received from any person with respect to the draft—Under s 5 the penalty for purchase of sugar-cane in contravention of a notification under s. 3, is fine upto two thousand rupees. S 7 authorises the Local Government to make rules for the purpose of carrying into effect the objects of this Act,

16. The Matches (Excise Duty) Act.—The present Act imposes an excise duty on matches manufactured in British India. Under s 2 "match" includes a firework in the form of a match; and, where a matchstick contains more heads than one capable of being ignited by striking, each such head is deemed to be a match. "Sphits" are defined as undipped splints such as are ordinarily used for making matches and "vencers" means veneers such as are ordinarily used for making matches. Under s. 4 the rates of duty payable are levied at the following rates, namely -(n) on matches in boxes or booklets containing on an average not more than eighty—(1) if the average number is forty or less, at the rate of one rupee per gross of boxes or booklets, (2) if the average number is more than forty, but not more than sixty, at the rate of one rupee and eight annas per gross of boxes or booklets, and (3) if the average number is more than sixty, at the rate of two rupees per gross of boxes or booklets, and (b) on all other matches, at such rates as the Governor General in Council may prescribe S, 8 empowers the Governor General in Council to direct use of Thish India from the territory of any Native State in India, equivalent to the excise duty imposed by this Act on sugar produced in British India. Under s. 8 the penalty for evasion of duty or failure to supply information which a person is required by any rule under this Act to supply or knowingly supplies talse

of s. 9 is imprisonment which may extend to six months or fine up to one thousand rupees S. 20 brings into accord the customs duty on matches with the excise duty imposed by this Act.

17. The Negotiable Instruments (Amendment) Act. -The present Act by amending s. 85 of the Negotiable Instruments Act, 1881, provides that cheques originally drawn to bearer do not lose their bearer character notwithstanding any endorsement thereon whether in tull or in blank and whether such endorsement purports to restrict or exclude further negotiation or not.

18. The Indian Trusts (Amendment) Act.—Certain Provincial Governments were desirous that the status of trustee securities should be extended to debentures issued by Land Mortgage Banks and similar corporations, provided that both the principal and interest of such securities were fully and unconditionally guaranteed by the Local Government concerned. The present Act gives effect to this by adding a provise to clause (a) of s. 20 of the Indian Trusts Act, 1882.

19. The Indian Dock Labourers Act— The International Labour Conference at its twelfth session held in 1929 adopted a Draft Convention concerning the protection against accidents of workers employed in loading or unloading ships. At its sixteenth session held in 1932 the Conterence adopted a Revised Draft Convention which is of exactly the same scope and character as the original draft convention adopted in 1929 and differs from it only in certain matters of technical detail. The present Act ratifies the Revised Draft Convention on behalf

S 2 defines "the processes" as including all work which is required for or is incidental to the loading or unloading of cargo or fuel into or from a ship and is done on board the ship or alongside it. Under s. 3 the Local Government may appoint Inspectors who are empowered by s 4 to cuter any premises or ship where the processes are carried on and make such examination of the premises and ship and the machinery and gear used for the processes, and of any prescribed registers and notices, and may take on the spot or otherwise evidence of any person for carrying out the purposes of this Act S. 5 empowers the Governor General in Council to make certain regulations, eg, regulations (1) providing for the safety of working places on shore and of any regular approaches over a dock, wharf, quay or similar premises which workers have to use and for the lighting and feneng of such places and approaches; (2) providing for the fencing of machinery, live electric conductors and steam pipes; (3) regulating the provision of safety appliances on derricks, cranes and winches...

20. The Indian Carriage by Air Act.—An International Convention for the unification of certain rules relating to international carriage by air was signed at Warsaw in October, 1929, by certain Governments. The Convention Under s. 42 of the Sea Customs Act, 1878, a defines the liability of air carriers for injury or drawback of seven-eights of the customs duty damage caused to passengers or goods. The

ture or import issued under this Act Under |Convention was not signed on behalf of India s. 13 the penalty for contravening the provisions | but its provisions were exammed by the Government of India and were found suitable to Indian ment of India and were found suitable to indian conditions. The present Act gives effect to the Convention in British India (s. 2). The Convention applies only in respect of international carriage by an i.e. carriage between two States signatory to the Convention, but as there is no law on the subject in India, beyond the general law of contract and the law relating to carriers on land, the Act empowers the Governor General in Council to make rules extending the provisions of the Convention also to internal provisions of the Convention also to internal carriage by air (s. 4). The rules contained in the First Schedule to the Act are the provisions of the Convention relating to the rights and liabilities of carriers, passengers, consignors, consignees and other persons. Under rule 17 the carrier is liable for damage sustained in the event of the death or wounding of a passenger or any other bodily mjury suffered by a passenger, it the accident which caused the damage so sustained took place on board the anciatt of in the course of any of the operations of embarking or disembarking. The earner is hable under rule 18 (1) tor damage sustained in the event of the destruction or loss of, or damage to, any registered luggage or any goods, it the occur-rence which caused the damage so sustained took place during the carriage by air The carrier is liable for damage occasioned by delay in the carriage by air of passengers, luggage or goods The carrier is not hable if he proves that he and his agents have taken all necessary measures to avoid the damage or that it was impossible for hun or them to take such measuses. In the carriage of goods and luggage the carrier is not hable if he proves that the damage was occasioned by negligent pilotage or negligence in the handling of the arcraft or in navigation and that, in all other respects, he and his agents have taken all necessary measures to avoid the damage (r 20). Under r. 21 if the carrier proves that the damage was caused by or contributed to by the negligence of the injured person the Court may exonerate the carrier wholly or partly from his liability. In the carriage of passengers the liability of the carrier for each passenger is limited to the sum of 1,25,000 tranes. By special contract, the carrier and the passenger may agree to a higher limit of hability In the carriage of registered luggage and of goods. the liability of the carrier is limited to a sum of 250 francs per kilogiam As regards objects of which the passenger takes charge himself—the hability of the carrier is limited to 5,000 francs per passenger (1 22). The sum in traites to be converted into rupees at the rate of exchange prevailing on the date on which the amount of damages to be paid by the carrier is ascertained by the Court [8 2 (5)]. Under 1 23 any provision tending to relieve the carrier of liability or to fix a lower limit than that which is laid down in these rules is null and void. The rules contained in the Second Schedule determine the persons by whom and for whose benefit and the manner in which the hability of a carrier in respect of the death of a passenger may be entorced

time of re-export of the goods subject to certain conditions. This provision was originally resent Act makes some necessary amendments of a poply to merchandise imported for ments of a formal nature in certain enactments sale in order that goods remaining unsold in this specified in the First Schedule to the Act and markets without the handleap of a tax. In tioned in the Second Schedule, practice, however, the concession was allowed even in respect of goods which have passed into use after import in violation of the ordinary accepted principle that customs duty is a tax on consumption. In many cases—e.g., cars and cinematograph films the goods spend much or most of their useful life in this country within the period allowed before re-exportation under claim for drawback. The Government of India felt that the grant of drawback on used goods was wrong in principle and they decided that the payment of such drawback should be discontinued except in special cases to be prescribed by rules made in this behalf. The present Act gives effect to this decision by amending the original Act. The Governor General in Council, under s. 2, may make rules, in respect of goods which have been taken into use between importation and re-exportation, (a) modifying the amount of duty to be paid as drawback or (b) prohibiting the repayment of duty as drawback or (c) varying the conditions for the grant of drawback by restricting the period after importa-tion within which the goods must be re-exported.

22. The Indian Aircraft Act.—Aerial navigation in British India, before the passing of the present Act, was governed by the Indian Aircraft Act, 1911. In 1919 an International Convention was signed by the plenipotentiaries of 27 countries with the beautiful. of 27 countries, with the object of establishing regulations of universal application and of encouraging peaceful intercourse with nations by means of acrial communications. To this Convention India was a signatory. The Convention deals with all questions relating to interpartness acrist a contract of the contract of national aerial navigation, and also provides for the institution of a permanent International Commission for Air Navigation, with very wide powers as regards the formulation of rules, the marking of aircraft, the grant of certificates, rules of the air and so forth, This Commission meets from time to time to amend the annexes of the Convention, which contain the detailed rules to be observed by the aircraft of all signatory States and by all aircraft when within the borders of those States. The present Act council, to make an order committing to custody the aircraft of all signatory States and by all aircraft when within the borders of those States. The present Act council, to make an order committing to custody the aircraft of the Governor General in Council in order to meet modern General in Council in order to meet modern developments, enables Government to give full effect to the provisions of the International made. The Supplementary Act expires in Convention and its annexes and provides for April 1935. The present Act removes the time certain other matters on which legislation has become necessary. The Indian Aircraft Act

country might be sent for disposal in other repeals certain enactments to the extent men-

25. The Factories Act.—The Royal Commission on Labour in India made a number of recommendations for the amendment of the Indian Factories Act, 1911. These were published with their Report in July 1931. After examining these in detail, the Government of India drafted a bill to replace the Indian Factories Act, 1911, which embodied the great majority of the proposals and included some other alterations that experience had shown to be desirable. The present Act is based on the Labour Commission's recommendations and the suggestions offered by associations of employers and employed and like organizations. The following are some of the recommendations of the Labour Commission which have received legislative sanction. S. 16 is designed to protect workers against the effects of excessive heat. The Chief Inspector may serve or give the Manager of a factory an order in writing specifying the measures which should be adopted if it appears to him that the cooling properties of the air in the factory are at times insufficient to arr in the factory are at times insumerate as secure workers against injury to health or againt serious discomfort. S. 34 reduces the working hours of adult workers to 54 hours in a week in non-seasonal factories and to 60 hours in seasonal factories. In the proviso a special excep-tion is made in favour of factories where the processes must go on throughout the day, such as factorics providing electric power and light, waterworks, etc. S. 87 reduces the hours for adult work in non-seasonal factories from 11 to 10 hours in a day. S. 54 imposes restrictions on the working hours of a child. A child cannot be allowed to work in a factory for more than five hours in a day. The hours of work of a child must be so arranged that they do not spread over more than seven and a half hours in any day.

in a jail outside Bengal any person against whom an order under sb-s. (1) of s. 2 of the Bengal Criminal Law Amendment Act, 1930, might be

become necessary. The Indian Aircraft Act. 1911, is repealed.

23. The Mechanical Lighters (Excise Duty)
Act.—With the imposition of a considerable duty on matches an abnormal development of the use of mechanical lighters is anticipated. This would mean a loss of duty and interference with the business of the Indian match manufacturing industry. The present Act therefore imposes an excise duty, at the rate of one rupes and eight annas per lighter on every mechanical lighter manufactured in British India. The customs duty leviable on these is also correspondingly enhanced.

27. The Assam Criminal Law Amendment Act., 1934, 1

of Criminal Procedure, 1898. As a local Legisla-idifference between the rate at which relief was ture cannot affect the jurisdiction of a High lobtained and the rate at which the tax was Court established under the Government of paid in that one of the two countries in which India Act, the present Act re-enacts these the rate of taxation was lower. provisions.

the Dutch East Indies, French Indo-China, Sarawak and Siam formulated an international scheme for the restriction of the export, produc-tion and stocks of rubber. The Governments of the territories concerned also entered into an agreement to take effective steps to put the scheme into operation. The main features of the scheme were —(1) that the restriction scheme should remain in force in the first instance up to the 31st December 1938, and its continuation thereafter should be subject to a review of the position by the Governments concerned. (2) that, during the currency of the scheme, the exports of rubber should be restricted to certain percentages of predetermined basic quotas; (3) that the import of rubber should be prohibited except under license; (4) that the stocks of rubber held by owners should be restricted; (5) that existing areas under rubber should not be extended except for exclusively experimental purposes, and in such cases only up to a maximum of one quarter of one per cent of the areas under rubber at the date of commencement of the restriction scheme and (6) that the replanting of areas under rubber should be restricted to a maximum of ten per cent. of the area under rubber at the date of commencement of the scheme during each control year, and to 20 per cent during the whole currency of the scheme. The present Act gives legislative sanction to this scheme

29. The Indian Income-tax (Amendment)
Act.—In accordance with s. 27 of the English
Finance Act, 1920, the United Kingdom grants a refund to a doubly taxed assessee (a) at a rate equal to one half of the United kingdom rate ot tax, or (b) at a rate equal to the Indian rate of tax, whichever is less. The relief given by British India is regulated by s. 49 of the Indian Income-tax Act, 1922, which provides that where the relief obtained in the United Kingdom is at a rate less than the Indian rate of tax, the assessee obtains a refund to cover the difference subject to a minimum of one half the Indian rate of tax. Owing to recent increases in the Indian rate of taxation coupled with the protection offered to the steel industry in recent reduction in the British rate of Incomediate by the Steel Industry (Protection) Act, tax from five shillings to four shillings six pence [1927, as subsequently amended, expired on the in the pound, in certain cases the effective rate 31st October 1934. In accordance with the of Indian income-tax is greater than the effective provisions of that Act an enquiry as to the rate of United Kingdom income-tax. In these extent, if any, to which it was necessary to rate of United Kingdom income-tax. In these extent, if any, to which it was necessary to cases s. 49 of the Indian Act has the effect of continue protection to the industry and as to leaving the assessee after he has obtained refunds the manner in which any protection found both in the United Kingdom and in India, necessary should be conferred, was made by the liable to an amount of tax which is less than if Tariff Board The present Act gives effect he had been taxed singly at the higher rate, to the protective measures recommended by The present Act therefore provides that when the Board. The recommendations of the Board the income doubly taxed has obtained relief in involved a very considerable reduction in the the United Kindgom the balance of relief level of import duties in certain important cases. obtainable in British India does not exceed the with a resultant reduction in the revenue derived

30. The Act .- The 28. The Indian Rubber Control Act.—In Petroleum Act.—Betroleum Act.—The Indian rubber in recent years and the consequent difficulties with which rubber producers have been faced, representatives of the industry in the main rubber-producing countries, namely, thirty years it became unsuitable in several India, Ceylon, Malaya, British North Borneo, ways. As early as 1903 the attention of the the Dutch East Indies, French Indo-China, Government of India was drawn to the incontrol of the production of the control o Petroleum venience arising from the existence in different provinces of separate sets of rules to regulate the importation, possession and transport of petroleum The original Act did not permit the issue by the Government of India of a set of rules applicable throughout British India and the only way in which it was possible to secure uniformity was by the issue by Local Governments from time to time of similar rules with the sanction of the Central Government The present Act transfers the rule-making powers to the Central Government

The Act applies to the whole of British India [S. 1 (2)] S. 2 defines "petroleum" as any liquid hydro-carbon, or mixture of hydro-carbon, and any inflammable mixture (liquid, viscous or solid) containing any liquid hydro-carbon "To transport" petroleum means to move petroleum from or e place to another in British India, and includes moving from one place to another in British India by sea or across territory in India which is not part of British India Ss. 3 and 4 provide for control over the import, transport and storage of petroleum by empowering the Governor General in Council to make rules in this behalf Under 8 8 no license is needed for the import, transport or storage of dangerous petroleum not intended for sale if the total quantity does not exceed six gallons S 9 contains exemptions intended for owners of motor conveyances and stationary engines. Clause (a) exempts petroleum kept in a tank in a motor conveyance or an internal combustion engine from the requirement of a license. Clause (b) allows the owner of a motor conveyance or engine to keep a stock of spare petroleum ance or engine to keep a stock of spare performant not exceeding 20 gallons. Ss. 14 to 22 deal with the testing of petroleum. Ss. 23 to 28 contain the necessary penal provisions Under s. 23 the punishment for contravening the provisions of this Act, is a fine of five hundred rupees for the first offence and a fine up to two thousand rupees for every subsequent offence.

from duties of customs S 4 of the Act, there-| Indian personnel of the Indian Army, Including fore, imposes an excise duty of four rupees this new class of officers, is contained in the per ton on all steel mgots produced in British Indian Army Act, in the same way that provision ner ton on all steel ingots produced in British India and 8. 6 provides for a countervailing for the Indian Air Force is contained in the customs duty equivalent to the excise duty on steel motors. This countervailing duty is additional to the protective duties recommended by the Board and alternative to the ad valorem crystal Act, under 8. 3 of the present Act they are known as "Viceroy's Commission Officers" revenue duties on articles in respect of which protection was not proposed. The new duties came into operation on November 1, 1934

- 32. The Indian Tariff Act. The present Act consolidates the existing provisions of law of parts of some fifty Acts to be repealed. The schedule of import tariffs exhibits as far as possible the actual rate of duty payable on each article under the tariff law for the time being, the only duties not included being those imposed by the Salt (Additional Import Duty) Act, 1931. The items subject to duty have been re-arranged npon a scientific plan enabling any particular item to be found without the use of an index and affording a suitable basis for future modification or supplementary legislation.
- 33. The Indian Army (Amendment) Act.—This Act., by amending the Indian Army Act., 1911, provides for the changes in the constitution of the Indian army rendered necessary by the progressive Indianization of the Detence Forces of India, A new class of Indian Officer com-missioned from the Indian Military Academy is about to appear. These officers, designated "Indian Commissioned Officers," will possess with respect to the Indian Army all the powers "Indian Commissioned Officers," will possess have the same civil rights and habilities as the with respect to the Indian Army all the powers personnel of this Majesty's Military and Air and privileges of the British Officers whom they Forces. The present Act, therefore, makes will gradually replace. The original Act is so formal amendments to certain existing laws to mended that complete provision for the whole attain this object.

- 34. The Indian Navy (Discipline) Act.—8 66 of the Government of India Act empowers the Indian Legislature to apply the British Naval Discipline Act (29 & 30 Vic. c 109) to the naval torces raised by the Governor General in Council It further empowers the Indian Legislature, in applying the British Naval Discipline Act to the torces and ships raised and provided by the Governor General in Council, to make such modifications and adaptations in the Act as it may think fit in order to adapt the Act to the circumstances of order to adapt the Act to the circumstances of India The present Act contains the changes in the British Naval Discipline Act that appear necessary to carry out this object and render its provisions suitable to Indian conditions. The Act also provides for the discipline of the members of the Volunteer Reserve, Intherto provided for by the Indian Marine (Amendment) Act, 1933, which is now repealed.
- 35. The Amending Act.—This Act is the outcome of the previous enactment which provides for the application of the British Naval Discipline Act to the Indian Army It is essential that members of the Indian Army should

# India and the League of Nations.

India is a Founder-Member of the League of: Nations and enjoys in it equal rights with other Member-States, a position which she mainly owes to the goodwill shown towards her advancement and aspirations by Great Britain and the Self-Governing Dominions of the British Empire. The League of Nations was established under the terms of the Peace Treaty which was signed in Paris in 1919 after the conclusion of the Great War. Great Britain and the Self-Governing Dominions in 1917 passed a resolution which set India upon the road that led to the high international platform on which she stepped.

India was represented at the Imperial War Conference of 1918, at the Imperial Conferences held in London in 1921, 1923, and 1926, and at the Imperial Economic Conference held in London in 1930. The report of the Inter-Imperial Relations Committee of the Imperial Conterence, which was adopted by the Conference of 1926, stated the position of Great Britain and the Dominions to be "autonomous communities, equal in status, in no way subordinate to one another in any respect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations. India is not yet a Self-Governing Dominion to the extent indicated in this formula. The first stage in the direction of establishing Responsible Government in India was prescribed by the Government of India Act, 1919, but the Governor-General of India does not yet (to quote again from the Inter-Imperial Relations Committee) hold "in all essential respects the same position in relation to the administration of European Committee and Committee an administration of public affairs" in India as is held by His Majesty the King Emperor in Great Britain. And there are certain other respects in which India's Constitutional position in the Empire is not the same as that of the Self-Governing Dominions India, for example, is not entitled to accredit a Munister Plenipotentiary to the Heads of Foreign States.

The position enjoyed by India in the Empire governed the position which she entered when, as one of the States of the Empire, she joined in the Paris Peace Negotiations in 1918-19 India's membership of the League of Nations places her in a unique position among all non-self-governing States. Dominions, or Colonies throughout the world. She is an original member of the League by virtue of para 1 of article I of the Covenant by which the League was established and which states that any fully self-governing State, Dominion or Colony not named in the Annexe may become a member of the League. She is the only original member which is not self-governing, and in virtue of the restriction under para 11 of article I, on the admission of members other than original members, she will, so long as the present constitution of the League endures, remain the only member which is not self-governing. As a member of the League, India was for the first time brought into direct and formal contact with the ontside world as a separate entity.

She was treated as if she had attained to the same kind of separate nationhood as that enjoyed by the Dominions.

On questions coming before the League, India has exactly the same rights as any other Member-State. The Scorctary of State for India in His Majesty's Government is ultimately responsible for the appointment of Indian delegates and for their instruction, but in practice, he and the Government of India act jointly in consultation and agreement with one another. Partly as a result of her membership of the League and partly owing to resolution No 1X adopted by the Imperial War Conference in 1917, recommending inter alia recognition of the right of the Dominions and of India to an adequate voice in British foreign policy and foreign relations, India has been given the same representation as the Dominions at all international conferences at which the British Empire is represented by a combined Empire Delegation. On many occasions in fact she has taken the lead in forming world opinion towards the achievement of the League's aims In particular in the international Labour organisation she has been successful in bringing Empire policy into line with her own on more than one occasion In many of those conferences, particularly those of the League, Indian delegations have taken an independent line of action, sometimes directly opposed to the attitude of other parts of the British Commonwellth. wealth. One interesting case occurred in 1920 at the Genoa Maritime Conteronce when Indian delegates in the face of opposition from the Empire managed to secure a mandate for special treatment for Indian sailors in British shipping although there was a concerted move from the Empire delegation to get Indian lascars driven off British ships.

#### India's New Status.

It will be observed that the situation created by India's stepping from the Imperial Conference into the Paris Peace Conference and League of Nations in the manner in which she did was in certain respects highly anomalous and one impossible to harmonize with her constitutional position as defined in the Government tional position as denned in the Government of India Act. Nevertheless, as the Secretary of State, in a Memorandum presented to the Indian Statutory Commission by the India Offlice in 1929, showed, "It has been the deliberate object of the Secretary of State to make India's new Status a reality for practical purposes within widest possible limits." It was not legally possible for the Secretary of State to relinquish his constitutional power of control, nor, consistently with responsibility to Parliament, could be delegate it: "But it has been his constant endeavour to restrict its exercise to a minimum, to keep even its existence as far as possible in the background, and to allow to the Indian Government the greatest possible freedom of action under the influence of their Legislature and of public opinion."

There are available many illustrations of these principles being followed in practice. India is given scope to pursue in the League of Nations an independent line of action within particular limit of the property of the pr very wide limits, even though, as has occurred In some instances, it brings her into conflict with His Majesty's Government. In 1925, for example, at the conference on Opium and Drugs India so acted that the British delegation had to obtain fresh instructions from H M.'s Government which resulted in India setting the question of Indian hemp to her own liking. In the event of such conflict within those limits, the Secretary of State acts, if he acts at all, as head of the Government of India rather than as a member of His Majesty's Government. He does not use his power to impose on the Indian Delegation an artificial solidarity with British Delegates, but, rather, with the consent of his colleagues of His Majesty's Government, he stands aside and allows representatives of India the same freedom as Dominion Delegates would enjoy in controversy with the Delegates of Great Britain. India has participated in all the Assemblies of the League. in the annual session of the International Labour Conference where because of her individual importance she plays a very predominant part, and in numerous Conterences on special subjects held under the auspices of the League as well as in some important non-League, International Conferences, including the Washington Conference on Naval Armaments in 1921, in Genoa Economic Conference in 1922, and the International Naval Conference held in London in 1930, India is also represented on London in 1930. India is also represented on several permanent Leggue bodies, e.g., the governing body of the International labour office, the Advisory Committee on Optum and Drugs, the Economic Committee, the Health Committee and the Committee of Intelligental Committee of Letallocated Committees. regain Committee and the Committee of Intellectual Co-operation. It is interesting to note that since 1921 Sir Atul Chatterjee has been acting as Dep try Commissioner of the Governing Body of the International Labour Office and this position was preliminary to his being elected Chairman in 1932.

The Personnel of the Indian Delegation has from the outset largely been Indian in race, though owing to the constitutional organization of the Indian administration it has irrequently been necessary for her to be represented by Englishmen. This has especially been the case when specialized experts were required. The Indian character of the personnel has as rapidly as possible been increased and in 1929 the Indian Delegation to the annual Assembly of the League was for the first time led by an Indian (The Hon'ble Sir Mohammed Habibullah. Member for Education, Health and Lands in the Executive Council of His Excellency the viceroy and Governor-General). In the follow-ing year the delegation was led by the Maharaja of Bikaner in 1931 by Sir B L Mitter; in 1932 by H. H. the Aga Khan; and in 1933 by Sir B L. Mitter again. A convention has been established for the leadership being held by an Indian. While the delegations to the International While the delegations to the international Labour Conference are becoming almost entirely Indian in personnel, the workers' delegations always have been Indian. This is merely an expression of the general policy appointment of a permanent Indian Delegate at of the Secretary of State that an increasing Geneva.

number of Indians should be given the opportunity of being trained in the international field. An example of the increasing part being played by Indians in League work occurred in 1930 when, during the Assembly of that year and at the instance of Sir Jehangir Coyaji, a member of the Indian delegation, an important resolution of the Indian delegation, an important resolution was passed in reference to the need for an inquiry into world depression. The Indian Delegation to the League Assembly in 1932 consisted of H. H. the Aga Khan (Leader), Sir Prabhashankar Pattani (President of Bhavnagar State Council), Sir Donys Bray (Momber of the Council of India), Members, and Sir Jehangir Coyajeo (Head of the Department of History, Economics and Politics, Andhra University). In 1933, the Indian Delegation consisted of Sir B. L. Mitter (Leader), Sir Denys Bray, Sir Abunssanuad Khan of Rampur and Bray, Sir Abinssanad Khan of Rampir and Sir Hotmusji Mchta of Bombay. The 1934 Delegation included H. H. the Aga Khan (Leaden), Sir Denys Bray, Sir V. T. Krishnama-chari (Diwan of Baroda) and Sir Homi Mehta, M C S (Substitute Delegate).

The Secretary of State in his Memorandum to the Parliamentary Statutory Commission wrote — India's membership of the League has had the effect of stimulating her national self-consciousness and has laid the foundations of an informed public interest in international affairs . India's representatives have not confined themselves merely to the role of spectators, but have played a prominent part in many of the meetings which they have attended. She has fully justified her position as a separate Member or the League by her co-operation in the economic and social spheres which form so large a part of its activities... But in certain questions where special Indian interests are involved, the Indian Delegation can and does take an independent line, and may even find itself in opposition to other parts of the Empire . . . But sometimes on non-political questions the British and Indian Delegations have remained in opposite camps. On such questions, when special Indian interests are at stake, India's right of independent action extends to speaking and voting against the views advanced on behalf of His Majesty's Government." Lord Reading, in a note at the end of his Viceroyalty, stated his conclusion that the extension that the system of consultation between the Secretary of State and the Government of India had worked satisfactorily and that the Government of India, without any definition of its problem-tical rights, already in practice obtained all the advantages which it might claim.

The year 1932 saw the opening of a League of Nations Bureau in Bombay in response to the demands of successive delegations to Geneva. Its purpose is to keep in touch with representative Indian opinion so that Geneva and India may be brought closer together. The Bureau is maintained by the League of Nations without any contribution by the Government of India.

# Labour in India.

Growth of the Labour and predominantly and predominantly agricultural country and over 70 per cent. of her people are dependent on the soil for their livelihood. Except in a comparatively few cases there is no settled and permanent labour force in most industrial centres in India. The vast majority of industries draw the labour they require from the village—labour which seldom breaks its contact with village life and periodically returns to renew its associations with it. This fact cannot be too strongly emphassed. If it is lost sight of it would be most difficult to understand how large bodies of comparatively low paid men and women can afford to participate in strikes involving complete stoppage of work and loss in wages for periods of half a year. Such strikes would be impossible if Indian industrial labour did not have agriculture to fall back upon as a subsidiary occupation during periods of prolonged industrial disputes. The figures for the 1931 Census show that the number of persons gainfully occupied in the whole of India amounts to 154 millions or 43.8 per cent of the total population. Of this number 68 per cent, are men and 32 per cent women. The proportion of the working population, \*e., carners and working dependants, engaged in agriculture is over 102 millions or 66.4 per cent.

The emergence of Indian industrial labour as such may be considered to be associated with the year 1880. Its growth and development since that date may be divided, for purposes of broad generalisation, into four periods; (1) from 1880 to 1915; (2) from 1916 to 1921, (3) from 1922 to 1927; and (4) from 1928 to the present day. The first period marks the growth of factory development with a slow but steady decline in cottage industries. The total number of cotton mills in India rose from 58 to 275 and the number of persons employed from 40,000 to 260,000. The total number of jute mills rose from 22 to 65 and the number of persons employed from 27,000 to 216,000. There was a vast expansion in railways and many new industries were established. Labour was immoindustries were established. Labour was immobile, earnings in agricultural pursuits were extremely low, commodities were comparatively cheap, and industrialists were able to get all the labour they wanted by tapping the adjacent villages at any rates of wages they ilked to offer so long as they were higher than those which could be earned by work in the fields. Both the men and the women employed were considered to be a part of the plant of the factory, child labour was exploited, and little thought was given to the human element behind the machine. Hours of work were excessive NO amenities were provided because the only thing that the worker was expected to do was to work, eat and sleep. The provision of housing was a necessary evil which had to be provided where factories were situated away from towns. The Factories Act was modelled more on the lines of providing against loss of life due to accident rather than from the grinding work which a

factory worker was expected to do. The humanitarian employer was considered to be a pest who would ruin industry and all that industrialists thought of was the greatest return which could be obtained from the capital invested,

The second period emerged soon after the out break of the great war. Large contingents of Indian troops were sent overseas, and had to be supplied with adequate clothing and the munitions of war Imports of manufactured articles into India were restricted owing to the bulk of the available British tonnage in ships having been commandered for transport of men and materials to the various seats of war. Heavy demands were made by the beligerent countries for raw products. India secured the opportunity for which she had been looking for generations. Her credit expanded, her industries thrived and the returns on capital invested in every branch of trade and industry became phenomenal. Prices seared. Owing to the influx of large bodies of persons into the towns, housing became hopelessly inadequate and rents rose to such an extent as to call for legislative restrictions. But nobody thought of those who were mainly responsible for the creation of the added wealth of Indir. Labour was still considered to be that inarticulate part of the plant of the to be that inarticulate part of the plant of the factory which it had always been. The end of the War brought visions of an Utopia. Big commercial and industrial enterprises were floated. Agriculturists were securing high prices for their produce. Labour was in great demand not only in agriculture but also in commerce and industry. The successes which labour met with during the war in demands for increases in rates of wages impelled them to demand further increases which heavy increases. demand further increases with each increase in the cost of living. Where demands were not granted strikes were threatened. The influenza epidemic of 1918 which swept away large masses of the population of the country created a big gap in the available supply of labour, and almost all the strikes of the period for increases in wages were successful owing partly to the necessity for speeding up production and partly to the shortage in the available supply of labour.

The gradual demobilisation of the Armies of the War and the closing up of the various Munitions Works dishanded tens of thousands of unen and women who rapidly spent the savings secured during the War. The pre-war industries in the belluctent countries could not be reorganised at once. The spectre of unemployment loomed large. Credit fell. With the fall in credit the demand for manufactured articles declined and prices began to show a marked downward tendency. The year 1922 may be considered as the beginning of the special of reaction and depression and the beginning of the third period in the history of Indian industrial labour. Labour all over the world demanded an improvement in the conditions of life and work. The creation of an International Organisation to deal with all questions connected with labour from an

480 Labour.

luterastional point of view and the commitment of India, as one of the signatories to the Treaty of Versailles, to the ratification and acceptance, as far as possible, of the Conventions and Recommendations adopted by the International Labour Conference have made it obligatory for her to fall into line with the other industrial countries of the world in ameliorating labour conditions. The beginning of this period, therefore, saw a radical revision of the existing Factory Law by an Amending Act passed early in 1922. The existing Indian Mines Act was replaced by another Act of 1923 during which year a Workmen's Compensation Act was also passed for the first time. A Trade Union Act was passed in 1926.

The depression in trade and industry which set in In 1922 continued, interspersed with a few short spells of transitory revivals, almost right down to the middle of the year 1934 since when there are apparent the beginnings of a diffinte leturn to prosperity Various attempts were made by all classes of industrialists to reduce the wages of labour In order to reduce costs of production. Concerted action taken by the Ahmedabad Millowners' Association to reduce the wages of operatives in the Ahmedabad cotton mills by 20 per cont, with effect from the 1st April 1923 was successful to the extent of an eventual cut of 15.625 per cent, being agreed to after a general strike lasting more than two months A similar attempt made by the Bombay Millowners' Association in 1925 to reduce wages by 11½ per cent. was, however, frustrated by a strike lasting for nearly three months which was eventually settled in tayour of the workers by a maintenance of the existing rates on the removal of the Excise Duty of 3½ per cent, on cotton manufactures in India by a Special Ordinance issued by the Governor-General in Conneil. Similar a tempts made in individual concerns in the Districts succeeded mainly for want of effective combination among the workers. No other organised attempts were made to effect reductions in wages. There were several reasons to: this The most important of these was that after the period of the decline in prices had set in after 1920, real wages, in comparison with the standard of life of the year' 1914, began to improve and labour was determined not to let go the advantage gained in the struggles immediately following the end of the This period was one in which a considetable number of Acts in connection with labour were placed on the Statute Book. In addition to these, the Government of India. had asked Provincial Governments to consider proposals to legislating with regard to prompter payment of wages. The enquiries held in 1926-27 into the question of Deductions from Wages or Payments in respect of fines indicated, legislation on the lines of the Truck Acts | It was becoming obvious to the Industrial Employer that Government were most anxious to do all they could to improve labour conditions in India. The employers, as a whole, therefore, dld not desire to precipitate matters by insisting on reduction in wages. It was imperative, however, that something should be done, and done quickly to reduce costs of production The only way to do this without reducing wages was, in the view of the employers, to ask the

worker to do more work during the existing hours of employment so as to enable the employer to dispense with a number of workers and thus to reduce his Wages Bill.

The fourth period beginning with the year 1928, therefore, saw the advent of Rationalisation or more efficient methods of working. Employers, particularly those in Cotton Mills in Bombay city, proposed to ask workers to mind more machines in return for a compensatory increase in wages. Some advanced firms controlling cotton mill agencies actually introduced various efficiency measures in their mills. The introduction of these measures necessitated reductions in the numbers employed, The beginning of this period coincided with the entry of the Communists into the Trade Union movement in India.

When the so-called Labour Group of the Indian National Congress failed to obtain acceptance of their ideas by the Congress, they formed in January 1927 a Workers and Peasants Party, one of whose objects was "to promote the organisation of trade unions and to wrest them from their alien control." Communist emissailes were sent out to India by the Third International to further war against Imperialism, to secure destruction of capital and to sow the seed of revolution. The Workers and Peasants Party started a paper called the "Kranti" (Revolution) in May 1927 which, however, had to cease publication at the end of the year owing to financial difficulties. The members of the Party took an active part in the strike of the operatives in the cotton mills in the Sassoon group early in 1928, but their attempts to bring about a general strike in the cotton nills in Bombay failed owing to the opposition of the Bombay Textile Labour Union which had been formed by Mr. N. M. Joshi in January, 1926. When another great group of mills in Bombay under the agency of Messrs, Currimbhoy Ebrahim and Sous sought to introduce efficient methods of work, the Communists saw their opportunity. All the operatives of the Currimbhoy group were brought out on the 16th April 1928; and the Communists, with the help of the turbulent elements in the industry brought about a complete stoppage of work by picketing, intimidation and stone throwing m all other mills in Bombay (except two mills at Colaba) by the 26th April. Owing to internal dissensions in another Union of cotton mill workers called the Girni Kamgar Mahamandal, they scenred the support of M1. A. A. Alwe, its President, and formed a new Union called the Bombay Girni Kamgar Union on the executive of which several prominent Communists were appointed. The Communists revived the publication of their paper the "Kranti" and they were successful, by holding almost daily meetings at which revolutionary speeches were delivered and by the publication of hand-bills, in capturing the imagination of the workers and keeping the strike going for a period of nearly six months. They also took an active part in the prolonged strikes of the same year in the Tata Iron and Steel Works at Jamshedpur and in the workshops of the Bengal-Nagpui Railway at Kharagpur. They actively asso-ciated themselves with the strike on the South Indian Railway and they secured an entry into several Unions connected with Municipalities, Port Trusts and other Public Utility Services. After the calling off of the General Strike in the Bombay Mills on the 6th October, 1928, they endeavoured to paralyse the cotton mill industry in Bombay by calling several lightning strikes in individual mills on the filmslest of pretexts, even though the terms of the settlement of that strike required that all disputes between the employers and employed on the interpretation of the terms of agreement should be referred to the Bombay Strike Enquiry Committee which had been appointed by the Government of Bombay to express opinions on the matters in contention.

Bombay has seen few riots and disturbances of the type which broke out in the City on the 3rd February 1929 and which resulted in the death of 149 persons and the destruction of property. The Riots Enquiry Committee appointed by the Government of Bombay found that the origin of the riots was the series of inflammatory speeches delivered by certain leaders of the Girni Kamgar Union during the General Mill Strike of 1928 and again during the Bombay Oil Strike which lasted from the 7th December 1928 till after the date of the riots.

In 1929 the Girni Kamgar Union succeeded in calling another General Strike in the Bombay Mills on questions connected with dismissals which they interpreted as a direct attack by the Millowners to undermine the Union. The strike, although not so complete in character as the strike of 1928, nevertheless lasted from 26th April to 18th September, 1929, and was called off only when the Court of Enquiry appointed by the Government of Bombay under the Trade Disputes Act had reported in unequivocal terms that the whole blame for this strike lay with the Bombay Girni Kamgar Union. But the Communist group was able to capture the Indian Trade Union Congress at the 11th Session held in Nagpur and to force the moderate elements, consisting of Messrs. Diwan Chaman Lall, N. M. Joshi, B. Shiva Rao, V. V. Giri, R. R. Bakhale, etc., to secede from the Congress on that body passing resolutions boycotting the Royal Commission on Labour in India and the International Labour Conference, by appointing the Workmen's Weifare League, a Communist organisation in England, as their Agents for Great Britain, for the declaration of Independence and the establishment of a Socialist Republican Government of the Working Classes in India.

It is of importance to lay stress on the problems connected with the Communist menace in India. The object of the Communists is not so much the welfare of labour as the spread of revolution. Their ultimate aim is the destruction of capital and the replacement of the established Government by a dictatoriship of the proletariat. The manner in which they can achieve this is by penetrating trade unions, by calling strikes in industries, by unduly prolonging them, by putting up strings of preposterous and absurd demands, by refusing conciliation or arbitration; and by sending masses of workers seething with discontent into the districts to preach their gospels of class

hatred and class war to the ignorant masses in hatred and class war to the ignorant masses in the villages of India. Fortunately for Industry thirty of the more prominent and avowed Cummunists all over India were arrested in March 1929 under Section 121-A of the Indian Penal Code for organised conspiracy, under the direction of the Communist International and other Associated bodies, to deprive the King of the Sovereignty of British India. The trial of these 30 persons in what is now historically known as the famous Meerut Conspiracy case lasted from 1929 to 1932 when some piracy case lasted from 1929 to 1932 when some of the prisoners were released on bail pending of the philotons were terased on ban pending final judgment. Judgment in the case was delivered at Meerut by Mr. Yorke, the Sessions Judge, on the 16th January 1933. One of the thirty accused died in prison, three were acquitted and the remaining 26 were sentenced to terms of imprisonment varying from transportation for life to three years. All the convicted persons appealed and substantial reductions were made by the Allahabad High Court in the sentences passed by the Sessions Judge of Meerut reduced to three years' imprisonment. The convictions of three persons were maintained to the extent that their sentences were reduced to the terms of imprisonment already undergone by them and they were ordered to be released from jail, The convictions of nine persons were set aside and they were ordered to be released torthwith. Some of the prisoners who were released have made frantic efforts to regain their hold on Labour Unions. The good sense of the worker has prevalled in most cases, but the Communists have again succeeded in getting into some of the more important Unions—notably the Railway Unions, and they are again endeavouring to capture the workers in the Textile Industry in Bombay. In the absence of strong leadership there are, however, several factions in their camps and different groups are working in the same industry.

The depression in trade which set in about ten years ago reached its zenith during the year 1933. The industry most affected was the Textile. Several cotton mills in Bombay were closed down—some of them permanently and their machinery was scrapped. The failure of Messrs. Currimbhoy Ebrahim & Sons who controlled ten Mills, aggravated the position and tens of thousands of workers were thrown out of employment as a consequence of the closure of the Mills under this agency. In many other cases, the alternative to closure was reduction in the wages in the operatives and over fifty cotton mills of Bombay City reduced their dear food allowances of 80 per cent. for male piece workers and 70 per cent. for men time workers and all ownen by an average of about 25 per cent. One or two mills attempted working more machines to an individual with shorter hours of work; and, where workers refused, gave them the alternative of pre-war rates of wages for pre-war standards of work or more machines with higher pay. Strikes of comparatively short duration occurred in a few individual mills as a protest against these cuts in wages, but the absence of trade union organisation in the industry coupled with a fear of unemployment sent the workers back to work within a few days of their going out on strike,

cuts. A Labour Committee was formed on an all-India basis to call a general strike in all Cotton Mills in India This Committee, however, did not meet with much success except in Bombay and in Sholapur In Sholapur all textile Mills were closed on account of this strike tor over three months. In Bombay City more than half the Mills were affected 101 over two months The Government of Bombay, as a result of the considerable amount of agitation carried on by labour leaders for a full enquiry by an impartial tribunal decided that the Commissioner of Labour should hold a Departmental Enguny into the whole question of wage cuts in textile Mills in the Bombay Presidency, and the institution of this enquiry was announced in the Officer to look after the in Bon Bon Bustine Council by the Hon below workers and to conclude Sin Ghulan Husem Hidayatallah, Leader of the Commissioners of Labour.

The beginning of the year 1934, however House, on the 26th February 1934. The Report was darkened by threatening douds pressing of the Departmental enquiry was published stiff fights between Capital and Labour in on the 21st June of the same year and the strike connexion, with actual and threatened wag in the Bombay Mills was called off practically This Report will be dealt with simultaneously in some detail in several subsequent sections of

> The outstanding events of the year 1934 in the field of Labour were (1) the passing by the Government of India of the New Factories Act . (2) the first Asiatic Labour Conference held at Colombo Ceylon on May 10th, 1934, attended by Labour representatives from India, Japan and Ceylon, (3) the publication of the Report of the Bombay Departmental enquiry into wage cuts, and (4) the passing by the Government of Bombay of the Trade Disputes Concilation Act providing for the appointment of a Labour Officer to look after the interests of textile Mill workers and for conciliation in disputes by the

## ROYAL COMMISSION ON INDIAN LABOUR.

the Government of Indm, appointed on 24th May, 1929, a Royal Commission "to enquire into and report on existing conditions of labour in industrial undertakings and plantations in British India, on health, efficiency and standard of living of workers and on relations between employers and employed; and to make recom-mendations." The Royal Commission consisted of the late Right Honourable M1. J. H. Wintley of the late Right Honourable MI. J. H. Whitley as Chairman with the Rt. Hon. Mr. Srinivasa Sastri, P.C., Sir Alexander Muriay, Kt., C.B. E., Sir Ibrahim Rahimtoolah, Kt., K.C.S., C.I. F., Sir Victor Sassoon, Bart., Dewan Chaman Lal, M.L.A., Miss Beryl M. Le Power Power, Deputy Chief Inspector, Trade Boards, England, and Messrs. N. M. Joshi, M.L.A., A. G. Clow, C.L. E., I.C. S., G. D. Birla, M. L.A., Kabeer-ud-din Ahmed, M.L.A., and John Chil, Assistant General Secretary, Transport and Railway Workers Union, England, as members, and with Messis S. Lall, England, as members, and with Messis S Lall, I C.S., and A. Dibdin from the India Office, London, as Joint Secretaries. Mr J. H Green, M.B.E., was Assistant Secretary. Lt.-(ol. A. J. H. Russell, C.B.E., IM.S., was subsequently appointed as a Medical Assessor and Mr. S. R. Deshpande, B Litt (Ovon.), Assistant Commissioner of Labour. Government of Bombay, was appointed as a Statistician to the Commission. The Commission arrived in India on the 11th October 1929 and after visting several places in India and examining several

the considered opinion of employers, workers menting the Commission's recommendations

The British Government, in consultation with legislators and officials, all of whom were re-be Government of India, appointed on 24th presented on the Commission Every aspect of the labour problem in India has been considered and discussed and the recommendations number many hundreds and cover a very wide field.

A summary containing the principal recommendations of the Royal Commission, classified according to the subjects with which they deal, was given at pages 474 to 484 of the 1932 edition of this publication The Government of India, in the Department of Industries and Labour, classified these recommendations under six different groups according as they involved or required. (1) Central legislation, (2) Administrative action by the Government of India; Provincial legislation (4) Administrative action by Local Government's and Administrations, (5) Action by public bodies, eg, Municipalities, Universities, etc., and (6) Action by employees and then organisations or by Workers, Umons; and the recommendations so grouped were forwarded by the Government of India to all Local Governments and Administrations under cover of a circular letter, dated the 30th September 1931, with a request that Provincial Governments should give careful consideration and examination to those recommendations in connexion with which they were required to unitate provincial legislation or to take administrative action and to bring such recommendaseveral places in India and examining several processions of the Central and Provincial the attention of public bodies and organisa-Governments, the Railways and Associations of the employers and Employed lett for England concerned. The Government of India published on the 22nd March 1930. The Commission returned on the 11th October 1930 and after touring Ceylon and Burma went to Delhi in November. tions as fell within the last two groups to September 1932 on the recommendations made The Report of the Commission was published by the Commission A second Report showing in June 1931 and is a document of first rate in the action taken by Provincial Governments up portance which will be the text-book of social to the end of July 1933 and by the Central legislation and labour welfare in India for many Government up to the end of October 1933 was years to come. Moreover, the value of its republished in February 1934 Owing mainly to commendations is inhanced by the fact that innancial stringency. Provincial Governments they are practically unanimous and represent have so far attempted little local legislation impleLabour. 483

but the Government of India have not only also been included in the various chapters into passed nine Acts—(1) Act 11 of 1932 repealing which this note is divided. The changes effected the Employers and Disputes Act, 1860, (2) the in connexion with the Workmen's Compensation Tea Districts Emigrant Labour Act, 1932, which Act, 1923 The Indian factories Act, 1911, as Teplaces the Assam Labour and Emigration amended by the Amending Acts of 1922, 1923, Act, 1901, as amended by the Amending Acts 1926 and 1931 and the changes proposed in comof 1908, 1915 and 1927, and which came into nexion with other extranglabour legislation and force on the 1st April 1933, (3) the Trade Recruitment for Assam will be dealt with under Disputes Amendment Act, 1932, (4) the Children the various headings into which this chapter is (Pledging of Labour) Act, 1933, (5) the Land, divided Summaries of the proposals for new or Acquisition (Amendment) Act, 1933, (6) other legislation already emeted are given the Workmen's Compensation (Amendment) below Act, 1933, (7) The Factories Act, 1934, consolidating and amending the law regulating labour in factories, (8) the Trade Disputes Amendment Act, 1934, and (9) the Indian Dock-Labourers Act, 1934, giving effect in British India to the Convention adopted at Geneva in 1932 concerning the protection against accidents of workers employed in loading or unloading of Royal Commission is that the Ships; but they have also drawn up two other of an industrial establishment for the purpose Bills for (1) securing prompter payments of wages of collecting debts should be made a criminal and for controlling deductions from wages in and cognisable offence. In this connexion respect of fines, and (2) amending the Indian, the Government of India invited the views respect of fines, and (2) amending the Indian the Government of India invited the views Mines Act, 1923, for certain purposes, especially of all Local Governments and Administrations for reducing the statutory limits of homes of in the Department of Indiastries and Labour work in Mines. The Government of India have Cucular letter, dated the 27th August, 1932. also submitted proposals to Local Governments and Administrations for mitiating new legislation in connexion with the following maters -

- (1) Employees' liability (Re "Common Employment" and "Assumed Risk"),
- (2) Extension of Workmen's Compensation to Agriculture and Forestry,
- (3) Making illegal the Besetting of an Industrial Establishment for the recovery of debts;
- (4) Fixation of Hours of Work for Dock Labourers.
  - (5) Allotment of Seamens' Wages:
- (6) Exemption of Salaries and Wages from Attachment.
  - Shortening wage periods, and
    - Airest and Imprisonment for Debt.

The Royal Commission made several recom-The Royal Commission made several recom-establishment, but it appears to them to offer mendations for the control of those factories the possibility of stamping out the practice of which do not use power and which are at present, recovering private debts at the pay desk and of not regulated. The Government of India are checking at least the power of the money-lender at present engaged in formulating proposals for a new and a separate Act for the regulation of such factories. Other matters are to be shortly taken up. For a more detailed knowledge of the action taken administratively by the Provincial Governments, Public Bodies and Employers' and Workers' Organisations, the reader is referred to the two reports referred to above published by the Government of India as it is obviously impossible to give a recital of such matters in a compact book of reference such as the Indian Year Book But, as it might be of considerable interest to the users of the Year Book to have a summary of the legislative proposals already put through or at present under consideration readily available, we propose to substitute in place of the summary referred to above, summaries of the more important

### New and Proposed Labour Legislation.

Proposal to make Besetting an Industrial Establishment for the purpose of collecting debts a criminal and cognisable offence— One of the several recommendations of the besetting The Government of India pointed out that the proposal aims at preventing two practices associated with the recovery of debts from industrial workers. One of these is the system whereby money-lenders are permitted by some employers to enter the factory and to collect then dues before the workman receives his pay The other practice is for the money-lender to want outside the factory gate and to seenre payment before the workman can part with any portion of his wages. The objection to both these practices is that they tend to make the payment of interest and the repayment of debts the first charge on wages. When the dues are collected within the factory the workman has, as a rule, no means of resisting the deduction, and when the dues are collected at the gate an element of intimidation not infrequently enters into the transaction. Government of India recognise that the Commission's proposal does not go far enough as it relates only to action in or near an industrial to make his demands a first charge on industrial wages. As such the Government of India were disposed provisionally to support the proposal. Replies from the Local Governments were asked to be submitted by the 1st January 1933. After a careful consideration of the views of the local Governments and the interested public the Government of India have come to the conclusion that central legislation on the subject is not called for The Government of India, however suggested to the Government of Bengal, where both official and non-official opinion is strongly in favour of the proposed measure, to undertake provincial legislation on the lines recommended by the Commission restricted to a typical industrial area in the first instance. The Government of Bengal, accordingly, intro-duced a Bill in the Bengal Legislative Council changes already effected or proposed to be made in December 1934 with a few to giving to this in the near future. Other important recom- recommendation. The Principal Section of the mendations made by the Royal Commission have Bill provides that "whoever losters at or near salary and wages of every workinen receiving, the case of other debtors the courts were granted less than Rs 300 a month be exempted entirely a discretion which they did not previously enjoy from the possibility of attachment. It, on examination, there are found to be objections to pleasure of a decrecholder and also to order applying this exemption to every one employed the release of debtors who were genuinely on a salary less than Rs 300 a month, the Commission consider that the definition of "works been made since 1888 for the elimination of man," in the Westman's Commence that the definition of the salary less than the definition of the salary less than the definition of the salary less than the definition of the salary less than the definition of the salary less than the definition of the salary less than the definition of the salary less than the salary less than the definition of the salary less than the salary less than the definition of the salary less than the s in the Workmen's Compensation Act imprisonment of debt. might be suitable.

of Industries and Labour issued a circular letter given careful consideration to the various dated the 25th November 1932 to all Local questions involved and they issued a compre-dovernments and Administrations inviting an hensive cucular letter on the subject to various Governments and Administrations investigating an incustive chemical reversion of their views on the subject. The local governments for their opinions, Replies Government of India are of opinion that the were asked for by the 30th November 1933 and Commission were disposed to favour the grant the question whether arrest and imprisonment thin mission were disposed as layout all greater the question where no continuacy is proved should than Rs 300 a month, and they, therefore, be abolished either generally or for particular consider that it is desirable to review the questional diseases of persons is being considered by the tions generally, and not solely with regard to Government of India industrial employees. Replies to their letter were asked to be submitted by the 1st April 1933. The opinious received have been examined possibility of undertaking legislation on an and the question of undertaking legislation is experimental scale restricted to the province of under consideration.

reference been wider.

The present law on the subject is contained in Sections 51 and 55 to 59 of the Civil Procedure Code read with rules 37 to 40 m Order XXI Under the substantive provisions of the Code a indement-debtor other than a woman may be arrested and detained in prison in execution of a decree But under rule 37 Order XXI, a court may, in lieu of issuing a warrant of arrest, issue a notice calling upon the judgment debtor to show cause why he should not be detained. Under rule 40 the Court may disallow his arrest and detention. There is thus no obligation on the Court at any stage to order either the airest or the imprisonment of a debtor who is genuinely unable to pay, but when a judgment debtor is brought to court the burden of proving that he is unable to pay rests on him.

The important question for consideration is whether imprisonment for debt (where there is no contumacy) should be abolished generally, This question has been considered on various but the Government of India reached the conclusion that imprisonment for debt where no fraud was proved should disappear from the Indian Stattle-book as soon as the conditions of the country permitted it. This consideration

Following the recommendations of the Royal The Government of India in the Department Commission the Government of India have

The Government of India is examining the Delhi in the first instance regarding the Labour Arrest and Imprisonment for Debt—
On page 232 of their Report, the Royal
Commission recommend that, at least so debts. The proposals are that (a) the court
ar as industrial workers in receipt of wages should be required to estimate the probable
or salary amounting to less than Rs. 100 per income and reasonable expenditure of the
month are concerned, arrest and imprisonment worker during the ensuing two years. (b) the Commissions' recommendation that legislation for debt should be abolished except where the amount of decree should be based on the difference debtor has been proved to be both able and between the two sums, (c) it should not be possible unwilling to pay. The form of the recommendation suggests that the Commission would have in all, (d) debts should rank preferentially in favoured a more general abolition for ariest order of their age, and (e) the possibility of and imprisonment for debt had their terms of appointing special courts for summary liquidation proceedings should be considered.

Bombay Money-Lender's Bill-The Bombay Legislative Council at its meeting on 16th March 1934 granted leave to Mr. Syed Munawar to introduce his Bill to regulate the money lending business. In the Statement of Objects lending business and Reasons, Mr Munawar stated that despite the steady growth of the Co-operative movement in the Bombay Presidency professional money-lenders known as 'Sowears' flourish in every town and village Except for a small proportion of them who are honest, a very big number has acquired a reputation for dis-honesty usury and other malpractices easily practised on the poor and illiterate labouring It is common knowledge that interest classes at unconsciously high rates ranging from 24 to 300 per cent is charged. That the first months interest is deducted from the principal before issuing the loan and that the dues are recovered under threats of violence The Usunous Lonns Act, 1918, provides a legal remedy but this applies only to such cases of usury as are referred to courts of law and occasions in the past notably in the years 1881- consequently many money-lenders manipulate 83. Opinion on the subject was deeply divided accounts of loans in such an ingenious manner as to evade the provisions of the existing law on the subject. The purpose of the Bill is to be an adjunct to the usurious Loans Act by imposing both a legal check upon unscrupulous moneyof the country permitted it. This consideration lending as also upon reckless borrowing. Its led to the passing of the Debtors Act, 1888 by main object is to provide a satisfactory virtue of which imprisonment for debt was method of accounting and submission of periodic abolished in the case of female debtors and in statements to the debtors. The Bill only

put during the Budget Session of the Bombay Legislative Conneil in 1935 and was lost

Extension of Workmen's Compensation to Agriculture and industry—In their recommendation No. 234, the Royal Commission singested that the question of the inclusion of persons employed by the larger agricultural employers and of those employed in reserved iorests deserves examination. The Government of India addressed a circular letter dated the 21st December 1931 to all Local Governments and Administrations inviting their views on the subject after consulting the interests concerned Replies were requested by the 1st June 1932 In the light of the replies received, the Government of India arrived at the conclusion that no action is desirable at present on the question of the inclusion in the Workmen's Compensation Act of persons employed by the larger agricultural employers The proposal for the melusion of fresh employees is still under consideration

Payment of Wages and Deductions—The recommendations of the Royal Commission on Indian Labour in connexion with the disburse-(i) Prompter payments; (2) a legal limitation of the wage period; and (3) the control of deductions from wages in respect of fines. The Government of India have implemented the Commissions' recommendations under the first. and the third heads and they introduced the Payment of Wages Bill in the Legislative Assembly on the 1st February 1933 - A motion for the circulation of the Bill was moved on the 14th February and was adopted. The Bill was then forwarded to all Local Governments and Administrations to opinion after consulting the Interests concerned A motion for the reference of the Bill to a Select Committee was Tabled during the Dellii Session of 1933-34. but was not reached and the Bill lapsed. The Government of India took this apportunity of revising the original Bill throughout in the light of the crifteisms received when the original Bill was circulated and a new Bill was introduced in the Legislative Assembly on the 13th Febmary 1935. A motion for the reference of the Bill to a Select Committee was adopted on the 18th February 1935. The new Bill, it passed by the Legislature will be one of the most impor-India We reproduce below the more important provisions of the Bill

(1) The whole Act is proposed to be applied to all factory workers and the whole Act except the clauses relating to prompt payment of wages to all railway employees. Local Governments are, however, to be empowered to extend the: Act, subject to such relaxations as they may consider necessary to any class of persons or of any other law for the time being in force, imployed in any industrial establishment or in the wages due to an employed person shall be

covers loans upto Rs. 1,000. A motion for the consideration of his employment or of any reference of the Bill to Select Committee was work done in his employment but does not melade (a) the value of any housing provided by the employer. (b) employer's contributions to Provident finds. (c) travelling allowances and grainities payable on discharge and (d) any terms paid to an employee for defraying Special expenses entailed on hun by the nature of his employment, This definition will prevent employers from endeavouring to get round the Act by Setting aside certain portions of wages as bomises for good attendance or for good work.

(4) Section 5 of the Payment of wages Bill requires that wages in all factories controlled by the Indian Factories Act shall be paid before the capity of the seventh day from the last day of the wage period in which the wages have been carned, nuless the seventh day is a nonworking day in which case wages should be paid on the first working day subsequent to such non-working day. Where the employment of any person is terminated by or on behalf of the employer, the wages due are to be paid before the expiry of the second day from the day on which his employment terminated ment of wages tall under three distinct catagories As several factories, particularly cotton and inte mills, require considerable time to calculate carnings from piece rates of wages. The Bill impowers Local Governments, if they are satisfied that owing to special difficulties relating to the calculation or distribution of wages any employer or class of employers cannot with resonable diligence make payment within the time specified, to exempt, by general or special order, to such extent and subject to such conditions as it may think fit such employer or class of employers from the operation of this Section provided, however, that, notwithstanding any such exemption, such portion of any wages due as can be paid without undue 118k of overpayment shall be paid within the period fixed for payment. No provision is made in the Bill tor the prompt payment of wages to those workers who termmate then employment themselves with or without giving notice, nor have the Government of India accepted the recommendation made by the Labour Commission that a week's notice on either side should be made legally binding both for the employers and the employed. Omission to provide for these matters raises a moot point as to whether the Common Law of tant pieces of Social legislation put through in Master and Servant with regard to contracts of employment is to stand or whether the new Bill is intended to set such law aside.

(5) The deductions which an employer can make from the wages due to his workmen are defined in Section 6 of the Bill which states that notwithstanding the provisions of sub-section (2) of Section 47 of the Indian Railways Act, 1890, or of any other law tor the time being in force, any class or group of industrial establishment, paid to him without deductions of any kind any Che operation of the Act is limited to except those authorised by the Act. Deduc-(2) The operation of the Act is limited to bersons whose earnings in any one month of the following kinds:

(3) The definition of "wages" has been (a) deductions by way of fine, permitted implified to cover all renunciation which is only under special notices to be posted in all spable of being expressed in terms of money factories, limited to six pies in every rupee of carnings during the month in which the fine employment or by any contract express or or fines were imposed and not recoverable more implied, to be paid to any person employed in than 60 days from the time a fine has imposed

- (b) deductions for damage to or loss of goods expressly entrusted to the employed person for custody, or for loss of money for which he is required to account where such that many class of industrial under the damage or loss is directly attributable to his damage or loss is directly attributable to his damage or loss is directly attributable to his damage or loss caused to the employees by the neglect or default. Deductions under this local for railway employees. Regarding proloss caused to the employees by the neglect or default of the employee person. It is also not intended to permit deductions under this persons as primary courts for the hearing of head in respect of damage or loss occurring in the course of a manufacturing process. e.g., in courts can award compensation up to ten times course of a manufacturing process, e.g., in respect of Spoilt cloth ,
- (c) deductions in respect of housing accommodation provided by the employees;
- (d) deductions in respect of such other services supplied by the employees as the Governor-
- (e) deductions in respect of recoveries of advances given before or during employment, the former being permitted only from the first wage payment:
- (f) deductions on account of Income Tax prohibitory orders from Courts of law, subscrip-tions to and repayments of advances taken from Provident Fund accounts; and

(g) deductions on account of payments to Co-operative Credit Societies approved by the Local Government, subject to such limits as the

Local Government may impose.

(6) In accordance with rule-making powers. (b) In accordance with ran-maxing powers, local Government may prescribe the acts or omissions on the part of an employed person for which fines may be imposed, and all deductions by way of fine and all realisations thereof are to be recorded in a register be kept by the employes in such form as may be prescribed All realisations of fines are to be expended only on such purposes beneficial to the persons employed in the factory or establishment as are approved by the prescribed authority. No deductions can be made for housing accommodation provided by the employer unless such accommodation has been accepted by him and it must not exceed an amount equivalent of the service rendered. No deductions by way of fine are permitted in case of children under fifteen years of age. No deductions are also permitted for tools and materials unless a Local Government specially authorises them under rules

The Act in the first instance is intended to cover all factory workers and railway employees but the latter are to be exempted from the operation of that part of the Bill dealing with the separate subjects.

courts can award compensation up to ten times the amount of the claim in respect of fine or deduction and up to Rs. 10 in the case of undue delay in payment of due wages. Penal proceeding against an employer can only be launched with (a) nequestions in respect of such other ser-vices supplied by the employees as the Governorthethe sanction of the prescribed authority and only if the claim in the past instance has been the prescribed authority and by general or the prescribed authority and by general or the Act are fines upto Rs 500 and for offences under the Rules to Rs 500 and for offences under the Rules to be framed under the Act upto Rs. 100. No contracting out of the Act is to be permitted and appeals are permitted.

With regard to the fixation of shorter wage periods of a week or a fortnight, the Government of India did not feel that they were on the same ground as they were with regard to prompter payments and the control of deductions and they have therefore made no provision in the Payment of Wages Bill to cover this matter. Instead, they addressed a circular letter to all Local Governments asking for opinions on the subject of the advisability of legislating for shorter wage periods. Replies to this circular letter were required to be submitted by the 30th October 1933. It is understood that where the monthly wage period exists the workers themselves are against the introduction of a shorter period as they are afraid that unless there is a universal change in accounting from monthly to fortnightly or weekly the shorter wage priod will not be of any material benefit, and that on the other hand weekly or fortnightly rents might be higher in total incidence than monthly rents and that in large towns like Bombay the thritter workers will squander away their carnings more rapidly with quicker payments. The replies submitted by the various Local Governments to the Government of India are under consideration Governments to the by that Government.

The modifications and amendments suggested by the Royal Commission on Indian Labour with regard to existing labour legislation and the extent to which they have been implemented will be dealt with in the respective sections

# INDUSTRIAL WORKERS IN INDIA.

In 1922 India obtained recognition by the League of Nations as one of the eight chief Industrial States in the world. The grounds on which this claim was based are stated in the Memorandum prepared by the India Officer which gave the following figures to illustrate the industrial importance of the country:—

"28,000,000 agricultural workers (excluding peasant proprietors); 141,000 maritime

transport; railway mileage in excess of that in every country except the United States."

The figures for the 1931 Population Census for ludua show that the number of Agricultural Labourers has increased to nearly 31½ million. This figure excludes cultivating owners (27 million). Cultivating Tenants (34 million). Landlords (3½ million) and others (6½ million). The number of earners plus working dependants, in Industry, Trade, Transport and Mines amounts to twenty six millions. Nearly slaven Millions. peasant proprietors); 121,000 marteine Landiords (57 minion) and obligations (63 minion) and obligations (64 minio The latest figures for the numbers employed in factories are those available in the All-India Report for Factories for 1933, which are reproduced in summary form in the tables given below:—

#### MIGRATION.

Total

3.933

agriculture there are naturally no large movements of population from one part to another Where the migration figures are high it is governily in the small units. Thus Delhi has 41 per cent, of iminiguants and Ajmeie-Meiwara 19, while in Ajmere City itself there are as many immigrants as there are natives

Immigration influences the population of India as a whole very little. The 1931 census shows only 7: 9,562 persons as born outside the country a: against 603,526 in 1921 - As against this must be set off on account of emigration about one million persons who are estimated to have migrated during the decade 1921-1931.

As between the different provinces of Indiahowever migration is of more importance, varying in British India from 1,244 219 (net) immigrants into Assam to 15,536 (net) minigrants grants into the North West Frontier Province. In Assam unmigration is the highest among all the provinces in India On the other hand immigration from Bihar and Orissa is the greatest. In the past the tendency was for migration to take place from the Native States to British India but during the decade 1921-1931 this position has been revised and the trend of migration has been on the whole from British India to the States, where the density is generally lower. Among the States, Bikaner provides a most striking example of immigration from British India In 1931, the number of immi-grants in Bikaner was 161,303 or 58 per cent of its increase in population Of the immigrants about 54 per cent, were from British India.

Internal migration is of several Kinds, (1) casual migration, involving minor movements Assam while there has been a great decrease

The principal occupation of India being pulginnages and fairs; (3) Periodic migratio which is caused by recurring seasonal demands (4) Semi-permanent migration is that of person who maintain constant contact with the homes, although earning their hyelihood else where, such persons often leaving their familie at their native places during the period c immation where they themselves ultimatel return from the place of migration; and (f. Permanent migration is that in which the migrants leaves one place for another for good In addition mention may be made here controller form of migration which may be calle

> The best example of casual migration furnished by the Punjab and Delhi nugration is particularly heavy at harvest tim and also at the changes of season when trader herdsmen, graziers and labourers from Kabu Baluchistan, Kashmir and the hills move dow to the plains for the winter months. Temporar migration continues throughout the year.

> Within the Provinces.—It is neithen eccessary nor teasible to deal with the various streams of migration between district an district of the same province or within a distric These movements vary according to times an seasons, but it may be useful to show the extent to which and the source from which some of the more important industrial centre draw their labour force.

Assam's immigration is generally speaking the permanent type. There have however be some changes since 1921 in respect of the source of Assam's labour supply. Madras is the on province showing any increase in emigration between neighbouring villages; (2) Temporary enigration to Assam from Bihar and Oriss migration which is mainly due to demand for There has been a steady increase in labour on canals and public buildings and to

fluidity On the other hand the whole complex ion of the population of Assam is being altered by the permanent immigrants from Mymensingh in Bengal. The third class of immigrant in Assam is the Nehall but their numbers are decreasing

however, a higher emigration figure than any other province. The net loss to the province by emigration is 17,58,000 As in the case of Assam here also a change is however taking place and the loss by emigration is migrants have mereased by 79,000

In the case of the United Provinces emigration has increased by a net balance of 1 58 000

emigration is concerned but its emigration is rubber industries,

mostly overseas The 1931 figures very marked merease in emigration to Malaya,

In the Central Provinces there is a growth in ' Daily Migration '

As between British and State Territory migration in 1921 was against the States and in Bihar and Orissa is typical of the rest of tayour of British India but this position was India in its numobility of labour, 959 persons reversed in 1931. Whereas in 1921 the net out of every 1000 being born therein. It has, loss to the States was 1,24,000. in 1931 the States gained 4,90,935 from British India.

> As between British India and the French and Portuguese settlements the balance of migration is greatly in favour of British India.

considerably less than in the previous decade Emigrants have decreased by 1,97,000 and im-emigration are Malaya and Cevion. Recruiting of Indian labour to Malaya was however stopped in 1930 None the less in 1931 over 6 lakhs Indians were found in that country is increased by a net balance of 1.58 000 case of Cevion immigration of Indian labourers.

Madras is the third highest province so tar as continued in spite of the slump in the tea and

#### OCCUPATIONS OF THE PEOPLE.

At the 1931 Census several changes were made | were workers and 56 as regards the collection and presentation of increasing dependence is attributed partly to occupational statistics. The principal amongst the difficulty of finding employment. these was that a complete compilation of figures of subsidiary occupations was attempted for the first tune. The Census however shows that instead of the proportion of non-working dependants to workers having been reduced by the new distinction between earners and working dependants, the proportion of non-working dependants has actually increased. Thus, while in 1921 out of every 100 persons occupations per 10 000 livelihoods according to 46 were workers and 54 dependants, in 1931, 44 classes and sub-classes --

dependants

The proportion of earners to working dependants is about nine to two, ie, of the total working population 81 4 per cent 14 in direct recent of wages or other sources of income and the other 18 6 per cent are helpers of the wage-earners.

Class and sub- class	Means of subsistence	Total	Princ Occupa		Depend Occup			ndary ipation,

IX	Domony He ing on their ingome	•		13	1,002
	w		. 1		
X		• •	• •	173	708
XI	Insufficiently described occupations	• •		406	505
X	Unproductive			125	105

Some of the differences revealed by the above table between 1921 and 1931 are no doubt due to changes in classification. But it is possible that the greater prevalence of unemployment in 1931 as compared to 1921 has contributed to the diversion of returns from definite to indefinite categories. A close examination of the detailed figures in the report however tends to show that there is a general tendency towards increase in what may be described as modernized occupations.

Among careers in principal occupations the number of females per 1,000 careers is 2.22. Among working dependants on the other hand females number 733 to 207 males, while if principal and dependent occupations are taken together, the proportion of actual temale workers to male is 317 to 683 in every 1,000.

During the 1931 census special returns from that in the majori factories were not called for. It is seen, however, that the number of workers employed in organized tactories is extraordinarily low for a hope abandoned the population of the size of that of ludia, being only 15,53,169. The All-India figure for persons them as subsidiary.

occupled in plantations, mines, industry and transport in 1921 was 24,239,555 while in 1931 it was 26,187,689.

Pasture and agriculture occupies 71 per cent of the actual workers of India; or, if those whe follow it only as a subsidiary occupation are excluded it accounts for 67 per cent. Industry occupies 10 per cent. of India's workers as compared to 11 per cent. in 1921. The one industrial order in which a marked increase hat taken place is production and transmission of physical force. Trade shows a decrease and so do 'professions and public force.' Then has however been an increase in the categorie private income' and 'domestic service.'

The 1931 census report contains an interesting analysis of castes by occupation. It show that in the majority of cases about half the males retain their traditional occupation About a quarter or less of the half of those tha have abandoned their hereditary occupation as their principal means of subsistence retain them as subsidiary.

## . RECRUITMENT OF LABOUR.

The methods adopted for the recruitment of labour in India have received general condemnation even from employers and the Whitley Commission has much to say on the subject,

Recruitment, except in the case of special apprentices and higher paid workers employed on railways, is effected either through Sardars (Recruiters) or Contractors, or direct at the mill or factory gates. The difficulties in connexion with recruitment are due (1) to the want of a stable labour force at any particular town or centre, (2) to the general illiteracy of the Indian labourer, and (3) to the inherent attachment of the worker taking up industrial employment to his village life and home.

The contractor is sent out to overcome the innate conservatism of the Indian peasant. He is helped in his work by the poverty and indebted ness of the peasant and also by occasional batarvests, but in addition he not infrequent indulges in fraud and misrepresentation be painting a rosy picture of the future that await the peasant in a town with its crowded bazasi and other amusements which are absent the village. The essence of the system is the payment of an advance to the prospective labourer in order to enable him to free himse from his pecuniary difficulties. The contract retains some form of control over his recruit and takes good care to recover the amount the advance together with interest, which

generally calculated at an exorbitant rate. Generally, the employers do not deal directly with the labourers recruited by a contractor. The latter is paid a lump-sum from which he pays his men and retains a portion for himself. In the Central Provinces, however, it is reported, that labour is actually purchased from private contractors at so much per head. The system of recruitment by contractors is most in use in Burma owing to the scarcity of labour in that province and the necessity of recruitment from distant places.

The method of recruitment through Sardars is also dependent on the payment of advances which are however made at the cost of the employer. The Sardar is an operative already at work in the mill or plantation and is sent out to recruit labour from among his relations, acquaintances or neighbours. He is drawn therefore from the same class as the recruits themselves and can therefore be relied on to deal more fairly with them. Another advantage of this system of recruitment is that the men recruited are insured against unemployment and find work waiting for them at their destination. On the other hand, it does not infrequently happen, especially in the Tea Gardens in Assam, that the Sardar remits persons who are lured away from their homes by prospects of a bright future and who, on arrival, find that conditions of work and wages are not so bright as they imagined. It is, however, only in plantations that this form of recruitment has been used to any appreciable extent.

The recruitment of labour at the mill-gate or at the pithead in the case of mines is the form of recruitment which is gradually gaining in importance over the other two methods. The news of the very much higher rates of wages paid in towns (which to the villager sounds fabulous as he has no idea of the higher cost of living) spreads throughout the countryside and draws large crowds of would-be workers. They are to be found at convenient gathering places on the thoroughfares waiting to be picked up for employment. The older hands also return from their village with groups of friends, relations and neighbours who come in the hope of finding employment in the mills. But the ignorance, simplicity and poverty of the Indian peasant render his exploitation an easy matter. The employer does not recruit himself the men required for his establishment but holds the overseer, jobber or mukadam responsible for the adequate supply of labour in the department. The latter takes the place of the contractor and exacts bribes from the new recruits. He also acts as a money-lender and thereby reaps a double harvest from the needy labourer. It would appear therefore that education and organisation are the only means by which Indian workers can escape from the clutches of intermediaries who like harples are ever ready to prey on them.

In the coalfields in Bihar and Orissa unskilled labour is recruited by means of Sardars. The Sardar visits villages and brings the labour with him, and the labour brought by him forms his gang. He has to pay the labour bucksheeth, thorati and travelling expenses, and for this purpose he frequently receives advances either

from the contractor or from the Company concerned. At the Bhowra Colliery advances varying from Rs. 3 to Rs. 10 are paid to the recruits in addition to their travelling allowances and food. Such advances are seldom recovered and never if the gang maintains good attendance at work. The Sardar obtains remuneration for his services in various ways. Sometimes he is paid a commission and a salary, but generally he is paid a certain amount on each ton of coal raised by miners working in his gang. Independent recruiters are paid at 9 plea per tub raised. In the Central Provinces the recruiters or mukadams as they are called receive 3 ples per head per week from the individual labourers whom they recruit and wages from the employers.

The Tata Iron and Steel Company at Jamshedpur maintain an Employment Bureau where skilled and unskilled workers are registered and employed. Applicants for work assemble in a yard and daily requirements are selected by the officer in charge. No outside recruitment is done in the literal sense of the word, but in the event of special qualifications being required and no applicants being available, the post is advertised in a few leading newspapers.

The methods adopted by different Indian railways for the recruitment of unskilled labour are generally the same as those which obtain in other industries. In the case of workshopmen, a trade test is generally given and in every case a medical examination has to be gone through. Special apprentices for the higher grades are engaged by all Railways. The terms and conditions attached to apprenticeship in most cases are similar.

The Royal Commission on Indian Labour has made several recommendations with regard to the employment of the factory worker for the guidance of employers in general. We reproduce below some of the more important of these recommendations.—

- (a) Jobbers should be excluded from the engagement and dismissal of labour.
- (b) Whenever the scale of the factory permits it, a Labour Officer should be appointed directly under the General Manager. His main functions should be in regard to engagements, dismissals and discharge.
- (c) Where it is not possible to appoint a whole time Labour Officer, the Manager or some responsible officer should retain complete control of engagements and dismissals.
- (d) Employers' Associations in co-operation with trade unions should adopt a common policy to stamp out bribery.
- (e) Where women are engaged in substantial numbers, at least one educated woman should be appointed in charge of their welfare and supervision throughout the factory.
- (f) Workers should be encouraged to apply for definite periods of leave and should go with a promise that on their return at the proper time they will be able to resume their old work. Whenever possible an allowance should be given to the worker who goes on leave after approved service.

Messis. E. D. Sassoon & Co, who control that in the event of the recrudescence of abuses, eleven cotton textile mills in Bombay and the Burma-Shell Corporation, have appointed Special Labour Welfare Officers to recinit labourers and look after their welfare. The acute trade depression has, however, prevented a more general adoption of this system but several firms are making noteworthy attempts to improve existing methods of recruitment in tactories

Following the appointment, by the Government of Bombay, of a special Labour Officer (Mr W B. Gilligan 108) under the Bombay Trindes Disputes Conduction Act, 1934, to watch the interests of workmen employed in cotton textile mills in Bombay City and the Bombay Suburban District with a view to promote harmonions relations between employer and workmen and to take steps to represent the grievances of workmen to employers for the purpose of obtaining their redress, the Millowners' Association Bombay, appointed, with effect from November 1st 1934, a special Laboun Officer [Mr C. A Dalal, B Sc (Econ.) (London)] to look after the interests of the Association.

Recruitment for Assam. Labour and Emigration Act, 1901, was designed mainly to regulate the recruitment and engagement of indentured labout. It had not been possible for some years for any worker in Assam to be subjected to a penal contract and, in consequence of this and other changes, the law became entirely unsuited to present conditions. Attempts were made by amending Acts in 1908, 1915 and 1927 to adapt the Act to meet altering conditions. Sub-stantial parts of the original Act were repealed and large numbers of rules trained in an en deavour to use the Act to regulate the recruitment of emigrants who are subject to no indenture. These changes proved madequate and they made the law extremely confused Large parts of the surviving provisions of the Act became completely meffective and those provisions which were operative were open to weighty criticisms

During the years 1926-1928 the Government of India carried on consultations with the Local Governments in regard to amending the law governing recruitment of labour for the Assam tea gardens. In the meanwhile, the Royal Commission on Labour had been appointed and they collected a large amount of evidence on the subject The Commission recommended the replacement of the existing legislation by a new enactment and suggested that the power conterred by section 3 of the Assam Labour and Emigration Act of 1901 to prohibit recruitment for Assam in particular localities should be withdrawn immediately. They recommended that the new Act should provide (a) that no assisted emigrants from controlled areas should be forwarded to the Assam tea gardens except through a depot maintained either by the Tea Industry or by suitable groups of employers and approved by the Local Government or by such authority as it may appoint, (b) that the Government of India should have power to frame rules regarding transit arrangements, in particular for the laying down of certain

Government should have power to reintroduce in any area the prohibition of recruitment otherwise than by means of heensed gardensurdars and licensed recruiters. Another recommendation of the Commission was that the Assam Labour Board should be abolished and in its place the Government of India should appoint a Protector of Immigrants in Assam to look after the interests of emigrants from other Provinces With regard to the question of patriation, the Commission recommended that every future assisted emigrant to an Assam tea garden should have the right after the first three years to be repatriated at his employer's expense and that the Protector should empowered to repatriate a garden worker at the expense of the employer within one year of his ariival if it is found necessary on the ground of health, unsuitability of the work to his personal capacity or for other sufficient reason.

The Government of India framed a Bill called the Tea Districts Emgirant Labour Bill, based mainly on the recommendations of the Commission but with variations in respect of minor details The Bill was introduced in the Legislative Assembly on the 11th March 1932 and was circulated to all Local Governments for opinion It was then reterred to a Select Committee who presented their Report to the Assembly on the 5th September 1932. The Bill as amended by the Select Committee was passed by the Indian Legislature in September 1932 and received the assent of the Governor-General on the 8th October 1932 The new Act came into operation from the 1st April 1933.

The Tea Districts Emigrant Labour Act, 1932, extends to the whole of British India meluding the Southal Parganas and repeals the Assam Labour and Emigration Act, 1901. and the subsequent amending Acts. The first object of the Act is to make it possible, on the one hand, to exercise all the control over the recruitment and forwarding of assisted emigrants to the Assam Tea Gardens as may be justified and required by the interests of emigrants and potential emigrants, and, on the other hand, to ensure that no restrictions are imposed which are not justified Local Governments are empowered, subject to the control of the Government of India, to impose control over the forwarding of assisted emigrants (Chapter III) or over both then recruitment and their forwarding as occasion may dictate (Chapters 111 and 1V). Employers will be prevented from recruiting otherwise than by means of certificated garden sudars or licensed recruiters. It is made unlawful to assist persons under 16 to emigrate unless they are accompanied With regard to by their parents or guardians. With regaid to the question of repatriation (Chapter II), every migrant labourer, on the expny of a period of three years from the date of his entry into Assam, will have the right of repatriation as against the employer employing him at such expiry (Section 7), and any emigrant labourer who whore the expury of three years from his entry into Assam is dismissed by his employer otherwise than for wiltul and serious misconduct will also have the right of repatriation (Section 8(1)) It will also be possible to claim repatriaprescribed routes to Assam and for the main-tion within three years in the event of the tenance of depots at necessary intervals; and (c) emigrant falling in health, not being provided

with suitable work or having his wages unjustly withheld or for any other sufficient cause (Section 10 (1)). Further, repatriation can be ordered at any time by a criminal court in the case of a labourer who has been assaulted by the employer or by his agent (Section 11). Where an employer fails to make all the necessary arrangements for the repatriation of a labourer working under him within fifteen days from the date on which a right of repatriation arises to an emigrant labourer the Controller may direct the employer concerned to despatch such labourer and his family or to pay him such compensation as may be prescribed within such period as the Controller may fix (Sections 13 and 15).

Section 3 of the Act makes provision for the appointment of a Controller of Emigrants with some staff and possibly one or more Deputy Controllers for supervising the general administration of the system which the Act seeks to establish, and the charges are to be met from in the previous year

an annual cess called the Emigrant Labour cess which shall be levied at such rate not exceeding Rs. 9 per each emigrant as the Governor-General in Council may, by a notifica-tion in the "Gazette of India," determine for each year of levy.

The provisions of the Act are Intended to apply only to emigration for work on tea plantations in the eight specified districts in Assam in the first instance, but power is retained to extend its application to other industries and to other districts in Assam if necessary (Section

Latest Statistics.—The Annual Report on the working of the Assam Labour Board during the year ending the 30th June 19.33 is the latest available. The Report shows that the total number of persons who immigrated into Assam during the year was 39,901, as against 50,997

The following tables shows the number of immigrants into the province of Assam by age and sex groups for the last five years :-

	,		_		
Sex and age of Labourers	1928-29.	1929-30	1930-31	1931-32	1932-33,
<b>Market in</b>			l	_	!
Men	37,161	33 510	30,245	23,247	15,412
Women	16,548	14,117	13 362	14,986	. 12,552
Children	15,191	12,169	9 91 2	12 761	11,937
Total	68 900	59,796	53,519	50 997	39 901

The birth rate in the Assani Valley Division was 3641 as against 31.97 in the previous year and in the Surma Valley and Hill Division and in the Suthar valvey and 110 Taxisson 32 82 as against 36 26. The death rates were 21 30 as against 22 16 and 19 69 as against 21 43 respectively. The total garden population rose by 17,000 during the year under report and stood at 1,089,490.

Reforms in the Bombay Cotton Mill Industry —In a circular letter dated the 8th January 1930 the Bombay Millowners Associa-tion instructed all mills affiliated to the Association to introduce, wherever possible, a policy of direct recruitment of labour instead of the existing practice of recruitment through jobbers. The introduction of a system for providing Discharge Certificates to operatives leaving service was also recommended. The certificates are to contain a record of the service of the operative concerned and in all cases of recruitment, the men presenting them-selves for employment will be asked to produce their Discharge Certificates. Notices are to be posted at all mills stating (a) that all persons will be engaged by the Manager or by the head of the department concerned, and (b) that any made difficult. The system is the beads of departments, assistants or tobbers to be more generally adopted.

accepting bribes from the workpeople will be instantly dismissed.

Several groups of mills are considering the possibility of employing labour officers who will be responsible for the direct recruitment of labour and for welfare work generally. The action taken by Messis E D Sassoon & Co. in this connexion has already been referred to above.

As far as employment of substitute labour is concerned most concerns outside cotton textile mills keep a five to ten per cent, force of spare hands in addition to the regular numbers required on the musters. In textile nulls, subsquired on the musters. In textile mills, substitute labour is engaged every morning at the gates. It is interesting to observe that Messrs E. D. Sassoon & Co., for their ten mills in Bombay, and a tew other employers in India have started the practice of "Decusualisation" by which employment tickets are issued to a number of workers, generally about ten per cent, of the standard muster, and substitutes are engaged only from those who have such cards. By the adoption of this system. The influence of the Jobber is minimised and bribery made difficult. The system is one which deserves

### ABSENTEEISM AND LABOUR TURNOVER.

Though there is meagre statistical information available on this subject, it may be stated with a fair amount of accuracy that the Indian worker is more habituated to absent himself from work than his prototype in other countries. He has yet to get himself thoroughly adapted to the industrial environment in which he finds himself. The reasons for his absence are not always connected with his love of rest but in many cases absence is due to causes beyond his control such as sickness, domestic difficulties, etc. The effects which poor and indifferent housing have on his work will be dealt with in the section on Industrial Housing

The Factory Labour Commission of 1907 made an inquiry into the number of absent workers and came to the conclusion that the average worker took 2 days off every month and a further holiday of from 3 to 7 weeks every year. In addition, he receives the weekly holiday and from 4 to 10 Indian holidays during the year. The question of absenteeism received the attention of the Indian Tariff Board (Cotton Textile Industry) and it was urged in evidence them that the efficiency of labour in Bombay was greatly reduced by the high persentage of absenteeism among the operatives. The Board came to the conclusion that Ahmedabad had a great advantage over Bombay in the matter of absenteeism, both in respect of a

low rate throughout the year and also of the absence of the wide seasonal variations which were apparent in other centres of the textile industry. They therefore recommended that in order to minimise the effect of absenteelsm there should be a general adoption of a system already in force in a few mills in Bombay under which a certain number of spare hands are entertained in each department, except the weaving. The Board said "The percentage of extra men in each department is not necessarily the same, but we were given to understand that spread over the whole of the mill, it usually worked out at about 10 per cent."

The Labour Office of the Government of Bombay publishes in the Labour Gazette every month statistics of absenteelsm in the textile mills at the important centres of the cotton industry in the Bombay Presidency and in Engineering workshops of the Bombay and Karachi Port Trusts. If figures of absenteelsm for each day during any month are examined it is found that they are higher on days immediately following pay day. The following table gives the figures for percentage absenteelsm month by month for the year 1933 with averages for the whole year for cotton textile mills in three important centres of the Bombay Presidency.

PERCENTAGE ABSENTEEISM IN THE TEXTILE INDUSTRY DURING 1984.

In the Electrical and Mechanical Departments of Railways, absenteeism generally amounts to 10 to 11 per cent. As in cotton mills, absenteeism is greater immediately after pay day. In Railways in Burma, absenteeism is lower and roughly amounts to 2·50 per cent.

Labour Turnover.-A charge is very often levelled against the Indian worker that owing to his migratory character, he changes his place of employment very frequently and that this results in a high rate of labour turnover. There is, however, very little information available regarding the average period of service or the rates of turnover at important industrial centres. in India. In the case of the Empress Mills at Nagpur, it has been estimated that since 1908, the average period of continuous service of the employees amounted to 7.89 years. In another cotton mill in the Central Provinces the average duration of employment worked out at about 40 months while in the case of other factories it roughly amounted to about 30 months. Out of a total number of 3,700 workers engaged in the Pench Valley Coal Mines it was found that 1,550 workers were in employment for less than a year, 650 from 1 to 2 years, 700 from 2 to 3 years and 800 workers had more than 3 years continuous service to their credit. In the manganese mines in the Central Provinces the average duration of employment comes to about 9 to 10 months for the whole of the labour force in any one year. One to two years is on an average the period of employment of workers in the Tata Iron and Steel Works. The total labour turnover during normal working for three years in the same Works amounted to 36.6 per cent., 31.3 per cent. and 24.1 per cent. respectively. In the Indian Cable and Construction Company in Bihar and Orissa, however, skilled labour has remained practically unchanged during the last five years but the unskilled workers recruited from the aboriginal class had changed to the extent of about 30 Cawpore the average period of continuous service amouted to 8.87 years.

The Labour Office of the Government of Bombay recently conducted a special enquiry into the length of service of cotton mili workers in Bombay City. A sample of 1 in 10 tenements was decided upon and the information was collected in suitable schedules by the Lady Investigators of that Office from the inmates of such tenements who were reported to be cotton mill workers. Only the predominant working class localities were visited for the purposes of the enquiry and the total number of schedules accepted for final tabulation was 1,348.

Of the 1,348 workers, 988 or 73 29 per cent. were men and 360 or 26 71 per cent. were women.

Nearly 21 per cent. of the operatives began work in the mills before the 15th year, 38 per cent. between the 15th and the 20th year, 32 per cent. between the 20th and the 30th year and the remaining 9 per cent. joined the first mill after they had attained the age of 30.

Sixty-three per cent. of the workers were born in the Konkan and 27 per cent. in the Deccan while the rest came from different parts of the country. It is very significant that not a single worker gave his place of origin as Bombay City.

About 48 per cent. of the workers covered by the sample continued in the employment of the same mill without change, 34 per cent. served in two or three mills and 18 per cent. had served in 4 or more mills. The highest number of mills served by an individual was 15. The cause of leaving the mills was "for going to native place" in 26 per cent. cases, "low wages and for bettering prospects" in 21 per cent. cases, "absence due to illness" in 14 per cent. cases and "retrenchment" in 10 per cent. cases. Other causes for leaving mills were unsuitable conditions of work, dismissal, strike, resignation, etc.

The approximate period of total service (including the period of non-attendance) was reported to be less than 5 years in 37.54 per cent. cases, 5 to 10 years in 23.37 per cent. cases, 10 to 15 years in 15.88 per cent. cases, 15 to 20 years in 9.13 per cent. cases and more than 20 years in 14.08 per cent. cases. The percentages of workers who had not changed mills was 67 in the case of operatives with less than 5 years' service and 42 for workers with 5 to 10 years' service. In the other service groups, the percentage of operatives working in the same mill varied between 25 and 45.

The actual active service was reported to be less than 5 years in 46.51 per cent. cases, 5 to 10 years in 24.26 per cent. cases, 10 to 15 years in 13.95 per cent. cases and 15 to 20 years in 7.20 per cent. cases. In the remaining 8.08 per cent. cases the actual service was more than 20 years.

A large number of workers in the age groups 15-20 and 20-25 had served for a period of less than 5 years while the most common period of service in the age group 25-30 was between 5 and 10 years. In the age group 30-35 about 30 per cent. of the workers had served for less than 5 years and 19 per cent. for a period of 5 to 10 years. Among workers of 35 to 40 years of age, the number of those falling in each of the first five service groups was between 16 and 20 per cent.

#### LABOUR IN FACTORIES.

The conditions of factory labour until 1913 were regulated by the Indian Factories Act of 1881, as amended in 1891. Under the chief provisions of the amended Act Local Governments were empowered to appoint Inspectors of Factories and Certifying Surgeons to testify of raciones and certaining singeous to testing as to the age of children. A mid-day stoppage of work was prescribed in all factories, except those worked on an approved system of shifts, and Sunday labour was prohibited subject to certain exceptions. The hours of employment for women were limited to 11, with intervals of rest amounting to at least an hour and a half; their employment between 8 pm. and 5 a.m. was prohibited, as a general rule, except in factories worked by shifts. The hours of work for children (defined as persons below the age of · 14 ) were limited to 7 and their employment at night-time was forbidden; children below the age of 9 were not to be employed. Provision was made for fencing of machinery and for the promulgation of rules as to water supply, ventilation, the prevention of overcrowding, etc.

The next Factory Act to be passed into law was Act XII of 1911. This Act extended the definition of "factory" so as to include seasonal factories working for less than 4 months in the year, shortened the hours within which children. and, as a general rule, women might be employed and further restricted the employment of women by night by allowing it only in the case of cotton ginning and pr sang factories. It also contained a number of new provisions for securing the health and safety of the operatives, making inspection more effective and securing generally the better administration of the Act. The most the better administration of the Act, however, was the introduction of a number of special provisions applicable only to textile factories. The report applicable only to textile factories. The report of the Factory Commission showed that excessive hours were not worked except in textile factories. The Act, for the first time, applied a statutory restriction to the hours of employment of adult males by laying down that, subject to certain exceptions, "no person shall be employed in exceptions, "no person shall be employed in any textile factory for more than 12 hours in any one day." It also provided in the case of textile factories that no child may be employed for more than six hours in any one day and that (subject to certain exceptions, which were factories worked in accordance with an approved system of shifts) no women may be employed before 5-30 a.m. or after 7 pm. (the new limits laid down generally for the employment of women and children).

The ratification by India of the Conventions adopted by the International Labour Conference held in Washington in 1919 necessitated radical revision of the Indian Factories Act of This was undertaken during 1921 and the Indian Factories Amendment Act, 1922, introduced a series of important reforms including the adoption of a CC-hours' week, the raising of the minimum age of children from 9 to 12, the prohibition of night work for women, the extension of the Act to a large number of small factories, drastic restriction of

nection with the law relating to the weekly holiday. The Factories Amendment Act of 1926 was passed in order (1) to widen the definition of "factories" so as to bring within the control of the Act such establishments as Electrical Generating Stations, water works, etc.; (2) to prevent the issue of age certificates by Certifying Surgeons to children who are not fit for employment; (3) to make provision for the prevention of cleaning machinery in motion, even by men, in cases where Local Governments were of opinion that the work is attended by danger to the operatives, (4) to provide a clearer defuntion of the periods prescribed for intervals of rest, and, (5) while still preventing the employment of children in two factories on the same day, the permitting of women to work in two factories on the same day provided that the limits for hours of work were not exceeded.

The Indian Factories Act 1911, as amended by the Acts of 1922, 1923 and 1925, pres-cribed a daily as well as a weekly limit to the hours of work intactories and provided for rest intervals and for a weekly holiday. Section 28 of the Act provided that no person should be employed in any factory for more than 11 hours in any one day; and Section 27 that no person should be employed in a factory for more than 60 hours in any one week. Section 21 of the Act made it obligatory for the occupier of a factory to provide for each person employed a rest period of at least one hour at intervals not exceeding 6 hours, or at the request of the employees concerned two rest periods of half an hour each, at intervals not exceeding 5 hours, the total duration of the periods of rest on that day not being less than one hour for each period of 6 hours worked generally. With the previous sanction of the Local Government and at the request of the employees concerned the rest interval could be reduced to half an hour for each male person provided that he was not employed for more than 81 hours on each working day and was not required to work for more than five hours continuously. For children, Section 23 (c) provided that no child should be employed in a factory for more than 6 hours in any one day. Section 21 (b) provided that for each child working more than 51 hours in any one day a period of jest of not less than half an hour shold be given and the period of rest was to be so fixed that no child should be required to work continuously for more than 4 hours. Sections 23 (b) and 24 (a) further provided that no child or woman may be employed in any factory before half past five o'clock in the morning or after 7 o'clock in the evening. Under Section 25 a child could not be employed in two factories on the same day but adults could be so employed in such circumstances as might be prescribed. Under the provisions of Section 26 every Manager of a factory had to fix specified hours for the employment of each person employed in such factory and no person was allowed to be employed except during such specified hours. The Governments of Madras, Bombay, the United Provinces, the Punjab and the Central Provinces were the only Local Govthe exempting provisions, etc. The principal ermnents which had prescribed the circumstances object of the amending Act of 1923 was the under which adults might be employed in more removal of a difficulty which had arisen in containing the containing trovinces were the only Local Royal Containing the containing trovinces were the only Local Royal Containing the containing trovinces were the only Local Royal Containing the containing trovinces were the only Local Royal Containing the containing trovinces were the only Local Royal Containing the containing trovinces were the only Local Royal Containing the containing trovinces were the only Local Royal Containing the containing trovinces were the only Local Royal Containing the containing trovinces were the only Local Royal Containing the containing trovinces were the only Local Royal Containing the containing the containing trovinces were the only Local Royal Containing the containing the

framed by these Local Governments invested the groundnuts, or the manufacture of ground-Inspector of Factories with the power to sanction and only of the manufacture of coffee, indigo, lac, such employment if he were satisfied that the rubber, sugar (including qui) or tea is to be a adults concerned were not employed for more than 10 hours on any one day and that they dovernment may, by notification in the local received the weekly holday prescribed by Section 22 or the Act. In addition to the notice which manufacturing processes are ordinarily re hours of work for particular periods, every factory was required to maintain a register of all persons employed in a factory in the form prescribed by the Local Government showing their may also, by notification, declare any seasonal hours of work and the nature of their respective factory in which manufacturing processes are employment.

Amendment of the Factories Act, following the Recommendations of the Royal Commission on Indian Labour.—The Royal Commission made several very recommendations for substantial important amendrecommendations for substantial amend-ments of the Indian Factories Act, 1911, as amended by the Amending Acts of 1922, 1923, 1926 and 1931, firstly, for the reduction of the maximum limits of daily and weekly hours of work in percunal factories and for the better regulation of such homs, secondly, for the improvement of working conditions in factories, and thirdly, for a more effective observance, on the part of the factory owners, of the requirements of the Act. The Government of India, in the Department of Industries and Labour, issued a circular letter, dated the 10th June 1932, addressed to all Local Governments and Administrations forwarding a draft Bill intended to consolidate the present law regarding the regulation of power using factories and incorporating the majority of the Commissioners' recommendations All Provincial missioners' recommendations An Etoymetar Governments were asked to submit replies to Honourable Member in charge of the Department of Industries and Labour of the Government of India made a tour of the more important industrial centres in India to discuss various questions arising out of the draft Bill with the representatives of Local Governments and associations of employers and workmen. On the conclusion of this tour, the Government of India convened a conference of Provincial Chief Inspectors of Factories and a final Bill was then drawn up which was introduced in the Legislatree Assembly on the 8th September 1933 It was passed into law at the 8mmer Session of the Legislative Assembly at 8mila in 1934 and received the assent of the Governor-General on the 20th August of that year. The new Act was brought into effect from 1st January 1935

The Royal Commission also made several suggestions with regard to the control of factories not using power nearly all of which are at present unregulated. The Government of India propose a new and separate Act in respect of such factories and they are at present engaged in draiting a Bill covering the Commissioners' recommendations in the matter.

The following are the more important additional matters covered by the Consolidating Act -

distinction is drawn between

m the year, not to be a seasonal factory for the purposes of the Act The Local Government ordinarily carried on for not more than 180 working days in the year and which cannot be carried on except during particular seasons or at times dependent on the irregular action natural torces, to be a seasonal factory for the purposes of this Act.

- (b) Factory operatives were formerly divided into two age groups . (1) Adults and (2) Children, i.e., persons over 12 and under 15 years of age. The Consolidating Act introduces a third age group of "Adolescents," i.e., persons over the age of 15 years and under the age of seventeen years who have not been certained as fit for adult employment. Such "Adolescents" as have not been so certified are to be deemed to be children.
- (c) The existing maximum limits of eleven hours per day and sixty hours per week continue to be permitted in the case of seasonal factories but the maximum hours of work permitted in the case of worker in perennial factories has been reduced to ten hours per day and 54 hours per week subject to the proviso that persons employed on work necessitating continuous production this letter by the 1st December 1932. On for technical reasons and persons whose work receipt of the Local Government's replies, the is required for the manufacture or supply of articles of prime necessity which must be made or supplied every day may be employed for not more than 56 hours in any one week. The maximum hours of work permitted in the case of children is five hours per day both in seasonal and in perenmal factories.
  - (d) The New Act introduces for the first time the principle of "spicadover," i.e., the limitation of the period of the number of consecutive hours during which the daily limits of hours of work may be availed of by the owner or an occupier of a factory. The spread-over in the case of adults is limited to thirteen consecutive hours and in the case of children to seven and a half consecutive hours; but the continuous period of eleven free hours in every twenty-tonr hours in the case of adults must include the hours between 7 p.m. and 6 a m in the case of women. The continuous period of sixteen and a half free hours in the case of children must include the hours between 7 p m and 6 a m Exemptions m the case of women are permitted in such cases as technical reasons regume that work should be done at night, e.g., in the fish curing industry.
- (e) The existing provisions with regard to the control of artificial humidification are expanded. The Act also gives power to Local Governments to authorise an Inspector seasonal and percunial tactories. A factory to call upon Managers of factories to carry which is exclusively engaged in cotton ginning, out specific measures for increasing the cotton or jute pressing, the decortication of cooling power of the air where he is of the

opinion that it is at times insufficient to secure in all cases where a worker in a seasonal operatives against danger to health or scrious discomfort, provided that the cooling power can be appreciably increased without involving an amount of expense which would be unreasonable under the circumstances.

- (f) With regard to welfare, the Act includes provisions for the maintenance of (1) a sufficient and suitable supply of water for washing for the use of persons employed in processes involving contact with poisonous or obnoxious substances; (2) adequate sheiters for rest in factories employing more than 150 persons; (3) rooms reserved for the use of children of women employed in factories employing more than 50 women and (4) first aid appliances. Powers are to be given to Local Governments to frame rules in respect of the last three matters. The Government of India, however, did not accept the recommendation of the Royal Commission with recommendation of the Royal Commission with regard to giving power to Local Governments to issue welfare orders as are issued by the Secretary of State in England under Section 7 of the Police, Factories, etc. (Miscellaneous Provisions) Act, 1914. They were of opinion that the matters to be covered by such welfare orders should have the approval of the Legislature and should not be imposed on factory owners by the Executive Government.
- (g) The Act gives Local Governments powers to make rules prescribing the fitness to be attained by children seeking employment in factories or in any class of factories, and when such a standard has been prescribed no child failing to attain it can be certified as fit for employment in a factory.
- (h) Inspectors are granted power to call upon managers to carry out such tests as may be necessary to determine the strength or quality of any specified parts of the structure of factories if they are of opmion that, on account of any detect or inadequacy in the construction of any factory, the factory or any part thereof Governments are empowered to make rules for the furnishing, by factories, of certificates of stability.

factory works for more than 60 hours in any one week or where a worker in a factory other than a seasonal factory works for more than ten hours in any one day. But where a worker ten hours in any one day. But where a worker in a factory other than a seasonal factory works for more than fifty-four hours in any week, he is to be entitled, in respect of the overtime worked less any overtime in respect of which he is entitled to extra pay under the preceding sentence, to pay at the rate of one and a quarter times his ordinary rate of pay. Where a worker in a factory works on the weekly rest day he is to be entitled, in respect of the overtime worked to pay at the rate of one-and-a-half times the ordinary rate of pay.

- (j) No exemptions are to be granted in respect of the provisions for spreadover, prohibition of night work between 7 p.m. and 6 a.m. and of the weekly limits of hours of work for women and persons under the age of sixteen years; but the grant of the existing exemption in the case of women employed in fish curing and fish-canning factories is to be permitted.
- (k) Sections 26, 35 and 36 of the Old Act are entirely recasted in order to provide more effective methods for the maintenance of records and registers of employment, the posting of notices, for the benefit of the workers, of their hours of employment, the prescribed abstracts of the l'actories Act, weekly holidays, etc., and for the notification of these notices and any changes proposed to be made in them to Inspectors of factories.
- (l) Higher penalties and fines are prescribed for occupiers or owners of factories who have been previously convicted for having committed the same offences.
- At the moment of writing it is too early to At the moment of writing it is too early to offer any comments on the working of the New Act. Outside, the textile industry, factory workers are not likely to be much affected because in most cases, weekly hours of work were 54 or under In textile mills, some owners have reduced the daily hours whereas others have taken advantage of the imposition of a shorter working week, to give a half holiday on the day preceding the weekly rost day. The (i) The maximum amount of overtime that shorter working week, to give a half holiday on ean be worked by virtue of any exemptions granted under the Act is limited and a time and a half is to be paid will be dealt with under "Wages."

# LATEST FACTORY STATISTICS.

The latest statistics available in connection with the administration of the Indian Factories Act are for 1933. The data published in connection with the normal weekly hours of work show that for the whole of British India men were required to work for more than 54 hours a week in 1,847 perennial and 3,016 seasonal factories, above 48 and not above 54 hours perputal and 329 seasonal factories and in 669 perennial and 329 seasonal factories, and not above 48 hours per week in 1,369 perennial and 1,060 seasonal factories. In the case of those factories employing women 3,186 required female workers to work for more than 54 hours and 1,060 seasonal nationes. In the case of factories Act. Hours of work in raiway work-those factories employing women 3,186 required shops in all provinces generally average 8 per female workers to work for more than 54 hours day and 48 per week. In most cases the hours per week whereas 1,870 fixed their hours at are so arranged as to provide for a half day off below 48 per week. 631 factories had hours above 48 but not above 54. Out of the 919 is worked during any particular week.

The latest statistics available in connection factories employing children, 367 had hour th the administration of the Indian Factories below 30 for children and 552 above 30. The details in connection with the various provinces will be found in summary form in the All-India Factories Reports or in a more detailed form in the Provincial Reports themselves. The statistics of factories do not show the hours of work in particular industries.

All railway workshops come under the Indian Factories Act. Hours of work in railway work-

Employment of Children .- By the Amend-Employment of Children.—By the Amend-ing Act of 1922 the maximum age of children was raised from 14 to 15 years and the minimum age from 9 to 12. The Act provides that no child shall be employed in any factory unless he is in possession of a certificate granted by a Certifying Surgeon showing that he is not less than 12 years of age and is fit for employment in a factory and while at work carries either the certificate itself or a token giving reference to such certificate. Further, no child is allowed to be employed in any factory before six o'clock in the morning or after seven o'clock in the evening and no child is to be employed for more than five hours in any one day. The number of children employed in factories during the years 1922 to 1933 is shown in the following table :-

Year.	Total.
1922	67,658
1923	71,620
1924	72,531
1925	68,725
1926	60,094
1927	57,562
1928	50,911
1929	46,843
1930	37,9 <b>7</b> 2
1931	26,932
1932	21,7.8
1933	19,091

An examination of the figures in the above table will show that the number of children employed rose from 67,658 to 74,620 in 1928. This was due to the fact that the tea factories in Assam which employed about 11,000 children were brought within the scope of the Act for the first time in that year. Further, the amendment of the Act in 1922 did not apply to children who were lawfully employed in a factory on or before the 1st July 1921 and it was not until 1924 that full effect was given to the new age restrictions for children.

There has been a steady decline in the number of children employed In the textile mills in Bombay City there are none.

Employment of Women.—The number of women employed in factories during the years 1921 to 1929 increased steadily from 206,887 employed in 1922 to 257,161 employed in 1929. But the number of women employed since 1929 has fallen perceptibly; the figures for 1930, 1931 and 1933 being 254,905, 231,183 and 216,837 respectively. The increase in the employment of women was due partly to the restrictions imposed on the employment of children and partly to the inclusion within the scope of the Act of all quasi-agricultural factories, for example, in the tea gardens which are dependent on female labour to a larger extent than other tactories. An important change which the revision of 1922 made in connection with the employment of women was the repeal of Section 27 of the Act of 1911 which permitted the employment of women at night in ginning factories. In view of this amendment the Government of India considered that they were in a position to ratify the Convention concerning the employment of women during the night adopted by the First International Labour Conference held at Washington in 1919 without undertaking any further legislation.

#### LABOUR IN MINES.

The conditions of employment of nations in mines are governed by the provisions of the Indian Mines Act, 1923, which came into force with effect from the 1st July 1924 replacing the former enactment of 1901. The Act of 1901 contained provisions designed to secure safety in mines and it provided for the maintenance of an inspecting staff, but it contained no provisions regulating the employment of labour.

Section 23 of the Indian Mines Act of 1923 limited weekly hours of miners to 54 under-ground and to 60 aboveground but no limits were prescribed for daily hours. In a Bill further to amend the Act for certain purposes introduced by the Government of India in the Legislative Assembly in March 1927 it was proposed to fix the maximum limit for daily hours at twelve. There was a considerable body of opinion in favour of enforcing an eight-hour day and this was also the opinion of a minority of the Select

The conditions of employment of labour in gradually worked upto. They recommended to ines are governed by the provisions of the Government that after the new provisions dian\_Mines Act, 1923, which came into force had been in operation for three years, the position should be again reviewed as to whether an eighthour shift could be introduced. A daily limit of 12 hours was thus imposed by the Amending Act of 1928 and this was to be brought into effect from April 1930.

Recommendations of the Royal Commission.
The Royal Commission on Labour which
reviewed the whole position came to conclusions
similar to those reached by the Select Committee.
A minority of the Commission advocated the
reduction of the daily limit to eight hours while the majority supported the recommendatior of the majority of the Select Committee, and in addition suggested that weekly hours above ground should be limited to 54. In the mean while, the fifteenth session of the Internationa Committee appointed by the Assembly to Labour Conference adopted a Draft Conventior consider the Bill. The majority of the Committee however adhered to the principle of a solely with reference to conditions in European twelve-hour shift as proposed in the Bill but countries. This Convention prescribes that the agreed that an eight-hour shift should be hours of work should be limited to 7½ per day in Labour Conference adopted a Draft Convention

resolutions were adopted by both the Chambers to the effect that Government should examine the possibility of reducing the statutory limits for hours of work in mines and that the results of this examination should be placed before

In pursuance of this Resolution the whole question was re-examined by the Government of India in 1932 and they addressed a circular letter in that year to all local Governments inviting their views on questions connected with reductions of hours, non-employment of children in Mines, etc. In the light of the opinions received, the Government of India drew up a Bill further to amend the Indian Mines Act 1923 and this Bill was introduced in the Legislative Assembly on the 22nd January 1935 The following are the more important provisions of the Bill -

(a) Local Government are to be empowered, by notification to direct that accidents which cause bodily injury resulting in the enforced absence from work for a period exceeding seven days shall be entered in a register in the prescribed form;

- (b) No person shall be employed in a Mine on more than six days in any one week,
- Mine shall be allowed to work for more than according to the immerals raised .-

underground coal mines and to 8 hours a day fifty four hours in any one week or for more and 48 hours a week in open coal mines. The Convention was placed before the Legislative of work of any such person shall be so arranged Assembly on the 24th February and before the that along with any intervals of rest they shall Council of State on the 2nd March 1932 and not in any one day spread over more than eleven

- (d) The periods of work of a person employed below ground in a Mine are to be reckoned from the time he leaves the surface to the time he returns to the surface and are not in any one day to be spread over more than nine hours. No person is to be allowed to remain below ground except during his periods of work, and where work below ground is carried on by a system of relays, the periods of work of all persons employed in the same relay are to be the same and are to be reckoned from the time the mst person of the relay leaves the surface to the time the last person of the relay returns to the surface.
- (e) Work above ground is not to be carried on in any Mme for a period exceeding eleven hours in any one day except by a system of telays so arranged that not more than any one relay of persons, employed in work of the same kind shall be at work in the Mine at the same
- (t) The employment in any Mine of children under fitteen years of age is to be prohibited.

Number of Mines -The following table gives the number of mines which came under the Act (c) No-person employed above ground in a during each of the last ten years, classified

#### LABOUR ON RAILWAYS.

ministration of the Factories Act. The Indian Assembly in the autumn session of 1929 and was railways employ nearly a quarter of a milhon leteried for consideration to a Select Committee. workers in other occupations for whom pro-vision for the control of their working hours has and the Hours of Employment Rules were been made under the Hours of Employment Rules, 1930, framed under the Indian Railways Amendment Act, 1929.

The Conventions adopted by the International Labour Conference in 1919 and 1921 prescribed a 60-hour week and a weekly rest of not less than 24 consecutive hours for all workers in British India employed in factories, in mines and in such branches of railway work as may be specified for this purpose by the competent has been accepted by the Government of India authority. The Indian Factories Act which was for gradual introduction on all railway systems amended in 1922 to give effect to the Conventations limited the hours of work in factories to ment of India have also accepted the recommen-11 in any one day and to 60 in any one week. Provisions were also made for intervance and a weekly holiday. Similar limitations were soon as possible the regulations and deneva imposed under the Indian Mines Act of 1923 give effect to the Washington and deneva imposed under the Indian Mines Act of 1923 give effect to the Washington and deneva imposed under the Indian Mines Act of 1923 give effect to the Washington and deneva imposed under the Indian Mines Act of 1923 give effect to the Washington and deneva consolidated Factory Act of 1934 weekly hours in perennial factories have been reduced to 54 and as will have been seen in the last chapter Similar reductions are proposed in the case of the hours for intermittent workers and of giving hours in Mines Both these restrictions days of absence at reasonable intervals where apply to factories and mines controlled by weekly rest days cannot be given. The Railway railway administrations. The application of the Conventions to other departments of railway administrations was found to be a problem extend the application of the Regulations to beset with many difficulties and has been a subthe Railways to which they have not yet been less the difficulties and has been a subthe Railways to which they have not yet been less that the Association drew up a set of rules in 1927 and Association drew up a set of rules in 1927 and these received the general approval not only of the Railway Board but also of the Boards of Directors of the lines managed by companies. Subsequently, however, it was found that these rules while they aimed at applying the spirit of the Conventions did not adequately fulfil the statutory obligations imposed upon Government by the ratification of the Conventions. The whole

All railway workshops come under the ad-|the subject was introduced in the Legislative drawn up during the following year.

The Royal Commission on Indian Labour made some very important recommendations regarding hours of work and rest day for railway workers other than those employed in 'tactories and 'Mines' As far as the recommendation that the weekly rest day of not less than 24 hours provided under the Act of 1930 should be granted subject to the usual emergency exceptions to all continuous workers is concerned this dation made by the Commission that special railway employees - They have also accepted the recommendation that the Railway Board should reconsider the practicability of reducing weekly rest days cannot be given. The Railway Board however consider that the first step that should be taken as soon as funds permit is to reduce the hours of work and provide suitable periods of rest in individual cases where require such & humanitarian considerations contse

Working of overtime on Indian railways is more prevalent on construction than on the oper line due to (1) the working season in the monsoon areas being confined to eight months in the year (2) special measures taken to speed up all heav! question was therefore again exhaustively work to avoid the locking up of capital; and reviewed and a Bill amending the Indian Rail- (3) wetfoundation work in bridges which necessify ways Act with the object of empowering the tate continuous work. Usually overtime is Governor-General in Council to make rules on such cases is paid at a rate fixed beforehand.

### SEAMEN.

The Indian Merchant Shipping Act, 1923, foreign-going ships have to be signed in the provides that no seaman shall be "signed on" for service on a ship unless he enters into a forms contain the rules and regulations provided contract in the manner specified with the for under the Act for maintaining discipline and Master of the ship. All agreements entered into for the fines which may be inflicted for the between Masters and Seamen for service on breach thereof.

### CONTRACT LABOUR.

In most industrial concerns in India work in connection with building loading and unloading, carting, receiving, and despatching of goods and work involving the employment of unskilled labour over which supervision is either difficult or costly is given out on contract. In the textile cotton industry work in connection with bleaching and dyeing is also generally done on contract at all centres. In the cotton mills in Ahmedabad work in the Mixing and Waste Room and the Yarn Bundling and Baling Department, in the Drawing—in Department and Beam Carrying is given out on contract in various mills In certain printing presses in the Bombay Presidency, composing is given out on contract. In most cases no supervision is exercised over the labour engaged by the contractor to whom the contract is given. Perhaps the most efficient method of control and supervision over contract labour is that which obtains on several railways. This will be dealt with separately lower down. Exceptions to the general remarks made above are as follows.

In the coal mines in Bihar and Orissa contractors are employed by a large number of collieries to provide the labour required for cutting the coal and loading it on wagons. The contractors are paid at a fixed rate per ton for all coal loaded on wagons. In some cases, however, the rate paid per ton is increased either because coal is being extracted from difficult places in the mine or because the contractor has difficulties in maintaining his labour supply. The extent to which contractors are employed is considerable and probably more than half the coal raised in the Jharia coal fields is raised on the contract system. Definite figures are not available but the Indian Mining Association reports that 90 per cent. of the coal raised in the mines belonging to that Association in the Jharia coal fields is raised by contract labour. In some cases contractors are only employed to provide the labour for cutting the coal. The contractor is generally responsible only for raising the coal while the colliery supervising staff is responsible for seeing that the mines are run safely.

#### UNEMPLOYMENT.

The problems connected with unemployment in India are quite different from the problems which have arisen in highly industrialised countries like England, the United States of America and Germany. In the latter countries labouris divided into two fairly distinct classes (1) industrial, and (2) agricultural. During periods of depression in industry those workers who are thrown out of employment either on account of a temporary or a partial closing down of con-cerns cannot fall back upon agriculture for earning their livelihood. It is necessary to repeat here, in order to understand this question clearly, that more than 70 per cent. of the population of India derive their livelihood from various occupations in connection with agriculture. This does not mean that agriculture is a perennial source of employment. Considerable unemployment and distress occurs during periods when the monsoon fails. Even during those years when the monsoon is generally successful, there are usually parts of the country where the rainfall is deficient and there is not enough scope for the employment of all the labour available. Both the Government of India and the various Provincial Governments have devised various schemes for famine relief and the variations in the visitations of nature with their consequent periods of prosperity and distress have now been brought more effectively under human control than ever before in the history of India. It is not neces-

sary to go into the details of the questions connected with famine relief in this section. The point which it is intended to bring out is that owing to the agricultural character of industrial labour in India, the problems connected with employment and unemployment are somewhat closely related to those connected with the success or the failure of the monsoon.

Speaking generally, the Indian labourer migrates to industrial centres when he finds that the yield of the land in his native place is not sufficient to maintain all the members of his samily. A certain percentage of the workers employed in industry temporarily give up their employment during the sowing, transplanting and harvesting seasons. During periods of depression in trade and industry, industrial workers released from employment fall back upon agriculture and thus add to the existing pressure of the population on the land. If the depression in trade and industry synchronises with the failure of the monsoon, the amount of unemployment becomes considerable and the resulting distress is enormous. Various States have devised schemes of Employment Exchanges for the purpose of studying the problems in connexion with the demand and supply of labour, to control the movements of labour and to place it where it is required. The Government of India and the various Provincial Governments have considered the question of

creating Employment Exchanges in India creating Employment Exchanges in India-several times during the last ten years, but opinion is unanimous that owing to the preponderatingly agricultural character of Indian labour it is practically impossible to devise any satisfactory scheme for the formation of Employment Exchanges. A vital difficulty for the adequate consideration of their problem has always been the want of satisfactory statistics to gauge the level of unemployment at any one period. Continuous migration between industry and agriculture makes the task of collecting such statistics well nigh impossible. Desultory attempts at measuring unemployment in particular industries in limited territories have, however been sometimes made Onc of the most recent attempts in this direction has been an enquiry into the extent of unemployment in the textile industry in the Bombay Presidency and the Central Provinces conducted as a part of the Departmental Enquiries held by the Labour Office and the Department of Industrics in 1934 at the request of the Government of Bombay and the Central Provinces on the general subject of wage Reductions in that industry. It was found that the total number of hands displaced in cotton mills in the Bombay Presidency on account of closures of mills amounted to about 38,000. In the Central Provinces about 2000 workers had lost their jobs between 1932 and 1934.

India is a State Member of the International Labour Conference, and as such she is bound according to the terms of the Treaty of Peace, to ratify and adopt, wherever possible, any Convention or Recommendation adopted by the International Labour Conference. The consideration of industrial unemployment was thrust upon the Government of India by the Washington Convention, which was adopted by the First International Labour Conference held in Washington in 1919. Each Member ratifying this Convention was required—

- (t) to communicate to the International Labour Office all information, statistical or otherwise, concerning unemployment, including reports on measures taken or contemplated to combat unemployment:
- (it) to establish a system of free public employment agencies under the control of the central authority, and to appoint Committees, including representatives of employers and workers, to advise on matters concerning the operation of these agencies;
- (iii) where systems of insurance against unemployment have been established, to make arrangements, upon terms to be agreed upon between the members concerned, whereby workers belonging to one Member and working in the territory of another shall be admitted to the same rates of benefit of such insurance as those of the latter.

In addition to this Convention, the First International Labour Conference also adopted a Recommendation which advocated—

- (a) the abolition of employment agencies, which charge fees or which carry on their business for profit;
- (b) the establishment of an effective system of unemployment insurance; and

(c) the execution of public works as far as practicable during periods of unemployment and in districts most affected by it.

The draft Convention was ratified by India but, in communicating this ratification to the International Labour Organisation at Geneva, the Secretary of State for India found it necessary "in order to avoid subsequent misunderstanding" to explain at some length the peculiar position of India in this matter and to emphasise the difficulties connected with a complete ratification by India owing to the predominantly agricultural character of the country. The Government of India, in addressing the local dovernments on questions arising out of the draft Convention and Recommendation adopted by the International Labour Conference, invited views on the following points:

- (1) Advisability of creating Public Employment Agencies in congested areas to facilitate the migration of surplus labour to industrial areas where there is a shortage of labour.
- (11) Advisability of utilising Public Employment Agencies in connexion with recruitment for Assam.
- (112) Advisability of establishing Public Employment Agencies for the dissemination of information regarding employment during times of tamine and scarcity to those in search of employment.
- (iv) Advisability of appointing Committees representing employers and workers to advise on matters concerning the operation of Public Employment Agencies.
- (v) Advisability of abolishing or controlling Employment Agencies which charge fees or which carry on their business for profit.

The replies of the local Governments Indicated that in most provinces the demand for labour exceeded the supply, that, even in provinces from which there was a large migration of labour, no difficulty had been experienced in obtaining information with regard to the areas where labour was in demand, that the establishment of public employment agencies would serve no useful purpose, and that such agencies might excite suspicion and be liable to be misunderstood by the people. With regard to recruitment of labour for Assam, the local governments concerned were agreed that any experiment on the lines suggested would be risky. On the question of the abolition of control of employment agencies which charge fees or which carry on their business for profit, the replies of the local Governments indicated that employment agencies of this character were practically unknown in India. In the circumstances, the Government of India decided to take no further action on the draft Convention or Recommendation concerning unemployment.

Although it has not been possible for the Government of India to take any action in the matter of unemployment either by legislation or administrative action, a few local Governments have devised schemes intended to reduce unemployment. The Government of Bengal started an unemployment relief scheme some three years for the financing of which a last of rupees per annum was sanctioned. The scheme contemplated the entertainment of two

Industrial Surveyors and the establishment of from other provinces. The effect therefore of four demonstration parties in each of seven select-trade depressions on the industrial labourer in four demonstration parties in each of seven selected industries inte and wool weaving, umbiella making, Cutlery, brass and bell-metal, soap making, shoe making and pottery. The scheme was to take up, in the first instance, the training of peripatetic demonstration parties, and, in order to secure non-official co-operation which was essential not only for getting recruits of the right type but also for creating an industrial atmosphere in a province, pre-eminently agricultural. The formation of a non-official association in each District to be known as Industrial Association was encouraged and the local district boards were called upon to assist. As there were only 28 demonstration parties work under the scheme could not be started in more than fourteen districts at a time, up to the end of 1933 four parties for each of the seven industries except jute and wool were working in different parts of the Province, those of the students trained by these parties have started factories of their own and in which considerable numbers of people have found employment.

Middle-class unemployment.—In recent years unemployment among the educated middle classes has been assuming alarming proportions and has attracted widespread public attention In January 1926, a Resolution was passed by the Legislative Assembly in the following terms :-

" This Assembly recommends to the Governor-General in Council that he may be pleased to appoint a Committee with a non-official majority to investigate into the problem of unemployment in general, and among the educated classes in particular, and devise suitable remedies whether by a system of industrial and technical education, or by a revision of the existing system of education, or by offering encourage-ment to the starting of new industries, or by opening new avenues of employment, or by the opening new avenues of employment, or by all these or any other means; and that the said Committee do make a report on the latter problem as early as possible."

Similar Resolutions were also passed in some of the local Legislative Councils. The Government of India did not consider that the appointment of a Central Committee would serve any useful purpose, but in a circular letter drew the attention of the local Governments to the gravity of the problem of middle-class unemployment in India. As a result of the Resolutions passed by the local Councils, Committees were appointed by some of the local Governments. The reports of most of these Committees refer almost exclusively to middle-class unemployment, but the Punjab and the Bengal Committees also dealt with general unemployment. The Punjab Committee came to the conclusion that "there was no unemployment worthy of mention among the uneducated classes"; whilst the ; whilst the Bengal Committee observed as follows :-

"The labourer, if we may use the term, has not yet been divorced completely from the land, and he frequently possesses or has an interest started in several other Mils. By the end of the in a small plot of land in his native place on the cultivation of which he can fall back in in the cotton mill numbers of workpeople employed times of depression. Added to this is the fact 1,35,000 and about 15,000 additional workers that industrial labour is still comparatively were able to secure work satisfactory periods as badks or substitutes.

Bengal is so far very small.'

The Assam Legislative Council passed a resolution on the 13th September 1933 recommending to the Government of Assam the appointment of a Committee to consider the problem of unemployment, specially among the educated middle class people of the Province. In the general discussion in connection with this resolution it was pointed out that extension of technical education, industrial development and concentration on agriculture to a large extent are the only means of dealing the problem in the conditions prevailing in Assam. On behalf of the government it was stated that this subject was discussed at a conference, recently held under the auspices of the Government of India, of representatives of departments of industry in all the provinces of British India and some of the Indian States, when the desirability of estabhishing a central industrial research for considering the question of industrialisation was emphasized. It was further stated that the Government proposed to establish agricultural colonies of educated young men, as an experimental measure, to make provision for helping technical institutions, to advance industrial loans to enable voung men with the necessary training to set up small industries and to restrict, as far as possible, employment under Government to natives of the province The Council was, however, informed that any action concerning this situation must have some reference to unemployment among the poorer classes as well,

Jute and Cotton Mill Industries. - In the jute mill industry in Bengal a large number of mills have, during the last two or three years, changed over from the multiple to the single shift system. It is estimated that on the single shift about 25 to 33 per cent. less labour force is required than on the multiple shift, but in spite of the changes no trouble has been reported with regard to unemployment. In the Bombay cotton mill industry, out of an average of about 140,000 workers employed during the years 1920 to 1927 approximately 20,000 have been thrown out of employment on account of the introduction of efficiency methods of work whereby spinners are required to mind two or three sides of a spinning frame instead of one and where the ordinary two loom weaver is required to tend three, four or six looms. The Bombay Strike Enquiry Committee dealt with this aspect of the question in their report and they recommended the creation of an Out-of-Work Donation Fund. This has been dealt with in the summary given with regard to the fludings of this Committee in the Section on Conciliation and Arbitration. Owing to depression in trade and external competition several cotton mills had compelled either to close down completely or to work with partial complements but the revival of trade which set in about the middle of 1934 resulted in several of the closed mills re-opening and work on high shift being

## INDUSTRIAL SAFETY AND INSPECTION.

As in other countries, the industrial progress | dents classified according to fatal, serious and of India has been accompanied by an alarming minor in factories in each of the British increase in the number of industrial accidents. Provinces in India in the year 1933 are shown Statistics for 1933 .- The numbers of acci- in the following table :-

was an amount of the same of t	 		-,	
Province.	Fatal.	Serious.	Minor.	Total.

people and employers to report accidents more frequently than in the past. But the increase in the number of serious accidents suggests that the problem is a serious one and that an organised "safety first" campaign is very desirable in India. Some progress along these lines has been made in Bombay in the mills and on the railways.

Factory Inspection.—The administration of the Indian Factories Act is entrusted to Factory Inspectors in each province. Where breaches of the Act are discovered the managers of factories are prosecuted and in most cases such prosecutions result in convictions. provinces except Assam have Factories Departments. In the Bombay Presidency the full time factory staff consists of the Chief Inspector of Factories, three Inspectors, three Inspector of Fattories, times dispectors, times Assistant Inspectors and one Woman Inspector. The Chief Inspector, two Inspectors and two Assistants have their headquarters in Bombac City. An Inspector and an Assistant are stationed in Ahmedabad. The Woman In spector has her headquarters in Bombay but has jurisdiction over the whole Presidency. She deals with problems mainly affecting women The Bombay Presidency is the only province in India which has a Lady Inspector of Factories. A part time Certifying Surgeon is stationed in Bombay and a full time one in Ahmedabad. They have been appointed as Divisional have also been granted powers under the provi-have been issued under this section only in Bomsions of the Bombay Maternity Benefit Act. bay, Bengal and Burma,

Their reports are sent to the Chief Inspector who passes orders on the same. Local Magistrates in the districts have ex-officio powers usections of the Act. under the Employment

Reporting of Accidents.—The Indian Factories Act requires the manager to report all accidents which cause death or bodily injury whereby the person injured is prevented from returning to his work in the factory during the 48 hours next after the occurrence of the accident. All classes of accidents namely, fatal, scrious i.e., accidents which prevent a person returning to work for 21 days or more, and minor are to be reported to the Inspector of Factories and to the District Magistrate and in cases of any accident resulting in death to the officer in charge of the Police Station. It is the duty of the Inspector of Factories to make an investigation as soon as possible into the causes of and the reponsibility for a fatal or serious accident, and to take steps for the prosecution of the person concerned if it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act. The Act also requires notice to be given of an accident which is due to any cause that has been notified in this behalf by a Local Govern-Inspectors with powers under the Health and ment, even though no injury may have resulted Sanitary sections of the Factories Act. They therefrom to any person. So far notifications

Accident Prevention.—The chief influences in the prevention of accidents are (a) the powers of Inspectors under the Factories Act to compel managers to erect adequate fencing and to take precautions against accidents;
(b) the voluntary interest of managers in safety measures and safety precautions; and (c) the interest of insurance companies as a result of the operation of the Workmen's Compensation Act. In many provinces the existing rules made under the Factories Act cover "Safety-First" measures such as compelling certain classes of workers to wear tightly fitting clothes, to prohibit children from entering into certain parts of factories, etc. Steady progress has been made in the different provinces in respect of 'saiety first' propaganda, but with wide differences in caste and religion and with the low standard of efficiency the problem of organisation of safety services in industrial undertakings is a matter of some difficulty in India, Particular attention was devoted in Bengal to the safeguarding of crowded machi-Bengal to the safeguarding of crowded machinery in the smaller factories and orders were issued during the year 1932 in that province to 52 lactories to after, repair or reconstruct their buildings. Special attention was also directed during the year 1933 to the dangers connected with hydro-extractors used in laundries and hosiery factories and to the structural soundness of factory buildings. Safety pamphlets were compiled and issued by the Factory Department in Bengal and Madrus Continued progress in the feuring of machinery · Continued progress in the fencing of machinery and in the use of safety posters is reported to have been maintained in all provinces and increasing attention is being paid by employers throughout India to safety measures and to the inculcation in the factory employee of "Safety first" ideas. In Rombay a certain amount of ground had already been broken and the Factory Department in co-operation with organisations of industrial employers produced a set of four or industrial employers produced a set of rout of safety posters some y ars ago and these have been very largely exhibited in the engineering workshops in the Presidency. Posters were also produced for the carding and spinning departments of cotton mills. The Red Cross Society was assisted in producing an All-India society was assisted in producing an All-India poster dealing with a universal risk connected with the wearing of loose-clothing which is ordinarily worn by the average Indian worker. Encouraged by the results of the posters introduced in Carding and Spinning sheds the Willeston Methods of the Posters in the Control of the Posters in the Carding and Spinning sheds the will be a produced that the produced the Carding and Spinning sheds the Millowners' Mutual Insurance Association, Bombay, produced a set of posters for the weaving department early in 1931 and these are now in department early in 1881 and these are now in fairly general use. Little has, however, been done in the factories of the Bombay Presidency in the way of specific organisations to further the cause of safety. Factorics, too, are not sufficiently large to warrant the employment of a safety engineer and reliance has almost totally been placed on the activities of the inspectorate in this particular direction. Safety Committees have however, been established in two cotton mills representative of the two largest groups in Bombay, as an experimental measure and in the R 1. M Dockyard, the G. I. P. Railway Workshops and in the Bombay

secured promises from other factories to establish similar committees.

\* \* \* 1, 1 \$ 4 . . \*

Mr. A. Trollip, Deputy General Manager of the Bombay Electric Supply and Tramways Co, Ltd., started a Safety First Association in Bombay in 1933 and he is President of this Boinbay in 1933 and he is freshent of this Association, The Association holds frequent Meetings at which subjects relating to safety first are discussed and it also publishes a safety first Magazine periodically. The office of the Association is at Esplanade Road, Bombay.

The railways are of course pioneers in the Introduction and the continuance of active propaganda in "Safety-First" work in all departments. These activities cover railway workshops (which come under the Indian Factories Act) as well. There has been marked improvement as regards minimising accidents in tailway workshops as a result of the activities of safety committees which have been established in some of them. The success of safety committees which has been established at the S. I. Railway workshops at Perambur and Golden Rock has been demonstrated by the fact that at the latter works accidents decreased by 53 per cent in 1932 as compared with 1931. A very comprehensive Safety First Organisation was established in the Parel, Matunga and Manmad Workshops of the G. I. P. Railway in 1929. The Railway administration also distributes to the employees an illustrated pamphlet on 'Safety First' in which a chapter on workshop safety is included. The G. I. P. organisation satety is included The G. P. Organisation is stated to be the best of its kind. Safety Committees have also been formed in the R. I. M. Dockyard and the Bonibay Electric Supply and Traniways Company. In the United Provinces no industrial undertaking has yet introduced a safety service organisation. The Welfare Committees of the E. I. Railway Locomotive and Carriage Workshops, Lucknow, do at times discuss at their monthly meetings questions of safety brought forward by members. Safety posters, published by the Railway Administration, are displayed in all their workshops and the Indian Red Cross Society posters in all factories in the province. In furtherance of the 'safety first" movement in Bengal warning hooters or sirens have been installed in the textile factories so as to warn employees before the power plant and machinery is set in motion. An instructive handbook entitled "Safety in Factories" dealing with general matters con-cerning the safety of factory operatives has been compiled and published. An agreement in regard to standard guards and safety devices for jute machinery has been signed by the Indian Jute Mills Association in regard to new machinery to be installed after July 1932. Posters supplied by the Indian Red Cross society illustrating the suitable type of dress to be worn by operatives while working our transmission machinery were distributed to factories in the different provinces, and safety propaganda of various kinds is receiving increasing attention from the large factory owners and the inspecting staff. Perhaps the best known instance where first class "safety first". Electric Supply and Tramways repair shops in Bonday. Safety Committees have been brought the Tata Iron and Steel Company at Jamshedpur. into existence in more than 20 mills in the Company has since 1920 subscribed to Ahmedabad and the Factory Department has the British Industrial Safety First Association and has installed notice boards all over the plant exhibiting the posters supplied by that Association. The literature received from the Association is periodically broadcast throughout the world.

The Railway Department conducts intensive "Safety-First" propaganda every year which embraces the following among other activities :---

- (1) Safety posters and safeguards are put up on prominent points both in Enghis and in the vernacular. Some of these, e.g., on the Bombay, Baroda and Central India Railway, are pre-pared from actual photographs ot safe and unsafe methods of working in selected branches of manufacture and maintenance work in the railway workshops.
- (2) An illustrated booklet was compiled by the Great Indian Peninsula Railway during the year 1926-27 which has been translated into a number of vernacular languages and distributed throughout the line on certain railways.
- (3) Photographs and special articles are published in the Railway magazines for the instruction of the staff.
- (4) Inspecting subordinates are instructed to take the opportunity, while visit-ing stations, of addressing the staff on "Safety-First".
- (5) Coloured pictures showing the right and wrong way of doing a job are posted at various places for the benefit of the illiterate staff.
- (6) A "Safety-First" film was prepared by the Central Publicity Bureau during the year 1927-28 and copies distrithe year 1927-25 and copies distri-buted to railways. The film is dis-played weekly by the travelling cinemas of the railways.
- (7) A "Safety-First" pamphlet has been prepared by the Central Publicity Bureau and is being issued to all railway administrations.

are easily available in cases of accidents. The Millowners' Association, Bombay, started classes for First Aid training in conjunction with the St. John Ambulance Association in 1931. These classes have been successful and facilities have since been provided for the training of men deputed by the Engineering Safety Committee also. In the Tata Iron and Steel Works at Jamshedpur boxes with first-aid supplies are maintained in each department and two first-aid hospitals in different parts of the plant are staffed with doctors and compounders in readiness to render first-aid to injured persons. During 1934 the Assistant Commissioners of Labour of the Government of Bombay who visited about 750 perennial factories in all parts of the Bombay Presidency Proper requested all managements to instal first aid boxes in all departments as far as possible.

Mines.—The Indian Mines Act of 1923 empowers the Governor-General in Council to frame regulations for the safety of persons employed in mines (Section 29, clauses (k) to (p)). Local Governments are also empowered to frame rules under the Act to ensure the proper fencing of a mine for the protection of the public. In addition, the Chief Inspector of Mines may call upon the owner, agent or manager of a mine to frame bye-laws which are not inconsistent with the provisions of the are not inconsistent with the provisions of the Act, regulations or rules to prevent accidents and to provide for the safety, convenience and discipline of the persons employed in the mine (Section 32). The bye-laws, when approved by the Local Government, have effect as enacted under the Act. Further, Section 19 of the Act gives special powers to the Inspector of Mines to take action when any danger is apprehended which is not expressly provided for by hended which is not expressly provided for by the Act, regulations, rules and the bye-laws. The Governor-General in Council has framed two sets of regulations, namely, the Indian Coal Mines Regulations, 1926, which apply only to coal mines and the Indian Metallierous Mines Regulations, 1928, which apply to all other mines. These regulations provide for the proper maintenance of shafts and outlets, roads and working places, haulage arrange-ments, fencing and gates; for the restrictions which have to be observed in raising or lowering persons or materials; for the precautions to be taken in the use of explosives; and for adequate ventilation and lighting.

During the year 1933 at Mines regulated by the Indian Mines Act, 1923, there were 142 fatal accidents, which is 21 less than In 1932, and 58 less than the average number in the preceding five First-Aid and Medical Relief.—Some of the Local Governments have framed rules requiring the provision, under the charge of responsible persons and in readily accessible an adequate number of sterilised dressings and an adequate number of sterilised dressings and some sterilised cotton in all factories employing accidents. No record is maintained of sterilised cotton in all factories employing accidents. 153 persons were killed and 702 persons estimated within easy reach of Government hospitals or hospitals maintained by The number of persons killed is 47 less than in 1932, and 58 less than the average number in the precious frame in the average number in the average number in the precious frame in the average number in the average number in the average number in the average number in the precious frame in the average number in the average number in the average number in the average number in the average number in the average number in the average number in the average number in the average number in the average number in the average number in the average number in the average number in the average number causes of the fatal accidents have been classified

Deaths occurring in each class of mines were as follows:—124 in coal mines, 3 in mica mines, 4 in silver-lead mines, 10 in tin and wolfram mines, 6 in lime-tone mines, 4 in stone mines and 2 in copper mines, Forty persons lost their lives by talls of roof, 14 by falls of side, 25 by haulage, 19 on account of suffocation by gases, 10 by explosives, 6 by explosives and agustions of fire damp, 3 in shafts, 10 by other accidents underground and 15 on the surface.

### WORKMEN'S COMPENSATION.

The Workmen's Compensation Act of 1923 which was the first piece of social insurance passed in this country, came into force on July 1st, 1924. The Act covered ten classes of workmen. Some of these, such as members of fire brigades, telegraph and telephone Imesmen, sewage workers and tramwaymen are small, and as the definition of scamen was lumted to those employed on certain inland vessels, only a very small proportion of Indian seamen came under the Act. Compensa-tion for seamen, however, has been secured by agreement between the Government of India and foreign steamship companies, under which the latter agree to the insertion in the ships' articles of a clause whereby the companies agree to pay compensation to injured Indian seamen on the same basis as if they were covered by the Act and all questions as to compensation are decided by Commissioners of Workmen's Compensation in India. An Indian seaman employed on a British ship legally comes under the English Act and the insertion of the clause referred to above does away with the practical difficulties which would arise if Indian seamen had to claim compensation in the English or other foreign courts. The five main classes of workmen covered by the Act are workers in factories, mines, docks and on railways, practieally all of whom are included and those engaged to certain types of building work, notably the construction of industrial and commercial buildings and any other buildings which run to more than one storey. The most important classes excluded altogether are agricultural workers and domestic servants. Non-manual labourers getting more Rs 300 a month are excluded, except on the railways. Power was taken to include other hazardous occupations by notification from time to time. All occupations involving blasting operations were thus declared by the operations were thus declared by the Governor-General in Council as hazardous occupations. Compensation is to be given as in the English Act, for personal injury by accident arising out of and in the course of

usually be extremely difficult for the employer to defeat a claim for compensation. On the other hand, other workmen will find it equally difficult to get compensation for disease, as they will have to prove that the disease arose "solely and directly" from employment. The diseases scheduled were authrax, lead poisoning and phosphotonis poisoning, but the list was made capable of extension. Mercury poisoning was thus added to Schedule III by notification, dated 28th September 1926

In order to bring the Indian law into conformity with the provisions of the Draft Convention concerning Workmen's Compensation for Occupational Diseases adopted at the Seventh International Labour Conternee held at Geneva in 1925, which had been ratified by India, necessary changes were made in sub-section (2) of section 3 and in the list of occupational diseases given in Schedule III of the Act. Certain occupations in connection with operations for winning natural petroleum or natural gas and in connection with the loading, unloading and fuelling of a ship in a harbour, roadstead or navigable water were also brought within the purview of the Act by notification issued by the Governor-General in Council in exercise of the powers conferred by sub-section (3) of section 2 of the Act.

buildings and any other buildings which run to more than one storey. The most important classes excluded altogether are agricultural workers and domestic servants. Non-manual labourers getting more than one than random that are excluded, except on the hazardous occupations by notification from time hazardous occupations involving blasting operations were thus declared by the occupations. Compensation is to be given for discasses occupations. Compensation is to be given for discasses in the English Act, for personal injury by accident arising out of and in the course of the deceased occupations. Compensation is to be given for diseases in certain cases. The provisions for diseases have been so framed that if a certain class of the workmen contracts a scheduled disease, it will provision was made for the protection of lump rovision was made for the protection of lump rovision was made for the protection of lump.

sums payable to a woman or a person under brought within the scope of the Act. Not legal disability by empowering the Commissional working a complex of the commission of the sioner to invest, apply or otherwise deal with them for the benefit of the woman, or of such person during his disability; (5) powers are vested in the Commissioner to recover any amount obtained by any person by fraud, impersonation or other improper means: and (6) the benefits of the Act were extended to (a) any person employed for the purpose of loading, unloading, fuelling, constructing, repairing, demolishing, cleaning or painting any ship of which he is not the master or a member of the crew, or (b) employed on a railway as defined in Sections 3 (4) and 148 (1) of the Indian Railways Act, 1890, by a person fulfilling a contract with a railway administration, or (c) employed as an inspector, mail guard, sorter or van peon in the Railway Mail Service, or (d) employed in connexion with operations for winning natural petroleum or natural gas, as a rig-builder, driller, driller's helper, oil-well puller or bailing or cleaning oil wells or putting in and taking out easings or drill pipes in oil wells or (e) employed in any occupation involving blasting operations.

In 1931 the Act was further extended to cover workmen engaged in the construction, etc., of aerial ropeways.

The Amending Act of 1933—The Royal Commission on Indian Labour made a number of recommendations for expanding the scope of the Workmen's Compensation Act, 1923, and on effecting improvements in it. The Government of India, in the Department of Industries and Labour, introduced a Bill in the Legislative Assembly on the 22nd February 1932 giving effect to the Commission's recommendations and it was passed in 1933. It came into torce on 1st July 1933 but certain sections of the Amending Act were brought into operation from 1st January 1934 in order to give time to the industries covered for making the necessary insmance arrangements in view of the alterations made in the amounts of compensation payable. The principal amendments made in the Act are as follows -

- (a) The definition of "dependent" has been recast so as to divide dependents into two categories, placing in the first those who are in practically all cases actually dependent and in the second those who may or may not be in that position. Widowed daughters, widowed sisters and widowed daughters-in-law as well as illegitimate children have been included in the list of dependents.
- (b) The scope of the Act has been extended so as to cover as completely as possible all workers in organised industries whether their occupations are hazardons or not and a step has been taken in the direction of extending the benefits of the Acts to workers in less organised industries when employment is subject to much risk. The distinction which existed between scamen employed in the ships registered in India and those in ships registered in foreign countries has been removed. Any person employed as the master or a seaman of any ship which is propelled by mechanical power or towed by a ship so propelled as well as in any other kind of ship whose net tonnage is 50 tons or more are

a factory but also men engaged in any kind of work incidental to or connected with work in a factory are entitled to the benefit of the Act. Other classes of workers included within the scope of the Act are drivers of private motor cars, workers employed in handling explosives or in the construction of any building twenty feet or more in height or in the construction, working, repair or demolition of any actual ropeway or in any occupation ordinarily involving outdoor work in the Indian Posts and Telegraphs Department, or in the operation of any ferry boat capable of carrying more than ten persons of in any estate which is maintained tor the purpose of growing cinchona, coffee, rubber or tea; or in a lighthouse as defined in clause (d) of section 2 of the Indian Lighthouse Act, 1927, or in producing or exhibiting cmematograph pictures; or in the training, keeping or working of elephants or wild animals or employed as a diver.

- (c) The waiting period has been reduced from ten to seven days.
- (d) The scales of compensation for death and permanent total disablement which are graded according to seventeen wage classes, have been considerably enhanced and the minimum rate introduced represents an increase of over 100 per cent on that given under the original Act, while the maximum is increased by 60 per cent The basis of calculation of the amount of compensation in the case of death or permanent total disablement is the same as before, i.e., 30 months wages for the former and 42 months wages for the latter for adults. The maximum amounts of compensation for death and permanent total disablement lieve been increased from Rs 2,500 and Rs, 3,500 to Rs, 4,000 and Rs 5,000 respectively. In the case of minors there is no change in the amount of compensation for death but the maximum compensation for permanent total disablement has been prescribed at a uniform rate of Rs 1,200 as against 84 months' wages or Rs 3,500 whichever is less in the original Act The maximum limit to the amount of halfmonthly payments in the ease of temporary disablement to both adults and minors has been raised from Rs. 15 to Rs. 30.
- (e) New provisions have been inserted into the Act enabling the interests of dependents in cases of fatal accidents to be better safeguarded by ensuring that (i) in as many cases as possible, tatal accidents are brought to the notice of Commissioners; (ii) where the employer admits liability, compensation is to be deposited promptly; and (iii) where the employer disclaims liability and there are good grounds for believing compensation to be payable, the dependents get the information necessary to enable them to judge it they should make a claim or not.
- (f) A contractor has the right to be indemnified by his sub-contractor if he has had to pay compensation either to the principal or to the workman.
- (g) An employer may make to any dependant advances on account of compensation not exceeding an aggregate of one hundred rupees. and so much of such aggregate as does not exceed

\*,

or its sequelæ.

Statistics.—The statistics regarding cases disist to be deducted by the Commissioner from such compensation and repaid to the employer. Further, the Commissioner may deduct Rs. 25 from the amount of compensation payable, for the funeral expenses of a deceased workman and pay the same to the person by whom such expenses were incurred.

(a) The following four new industrial diseases have been added to Schedule III of the Act:—
(1) Mercury poisoning or its sequelæ; (2) poiloning by benzene and its homologues, or the single poisoning; (3) chrome ulceration or its sequelæ; and (4) compressed air illness or its sequelæ.

Statistics.—The statistics regarding cases disposed of under the Act have been collected and published since 1st July 1924 on which date the criginal Act came into force. These statistics relate to the more important classes of workers, relate to the more important classes of workers, or native specific payable.

(b) The following four new industrial diseases was about 6½ lakhs of rupees in 1925, 8½ lakhs in 1925, 11 lakhs early in 1927, and 1928, 12½ lakhs in 1928 and 1930, 10½ lakhs in 1931, 8½ lakhs in 1928 and 1930, 10½ lakhs in 1931, 11 lakhs in 1932, 11 lakhs in 1935, 11 lakhs in 19 compensation paid in each year since 1924 :-

increase in cost has been estimated to be not more than annas four per ton of coal (vide para 39 of the Report of the Indian Coal Committee, claims. In Bombay, 1925). However, the owners of many of the smaller coal mines were compelled to close down their mines but this was due mainly to the severe depression with which the industry was faced. In the Punjab the proprietors of the coal mines in the Jhelum District were reported to be not satisfied with the privileges enjoyed by the miners under the Act as some of them had to pay as compensation on a single accident more than they could earn during a month. An unexpected increase in the number of serious and fatal accidents may undoubtedly companies in this country and the most import- tors ant of these are the Claims Bureaux in Calcutta does not appear to have made much progress.

Effect on Industry .-- A compulsory system | and Madras, The Calcutta Claims Bureau which of workmen's compensation enhances the represents many of the leading insurance cost of production but not to any appreciable extent. #### INDUSTRIAL HOUSING.

One of the most vital problems facing industrial employers in India to-day is that connected with the housing of the labour which they The importance and the urgency of employ. providing decent housing cannot be sufficiently emphasized.

The conditions of industrial housing in India are, in many cases, appalling and the majority of buildings, tenements or huts in which industrial labourers are housed are insanitary and more or less uninhabitable from Western points of view. Provincial Governments, Municipalities, Improvement Trusts and the larger employers have done a great deal to mitigate the evils resulting from an insufficiency of decent sanitary housing for labour, but a considerable amount still remains to be done before this question can be considered to have been satisfactorily solved.

Several commissions and committees inquiry appointed by the Government of India and the Provincial Governments in connection with various subjects have dealt with the question of industrial housing. The Industrial Commission in 1918 urged that, in addition to the scheme followed by the Improvement Trust in Bombay, other measures should be adopted such as the refusal of permission with a few exceptions, to fresh industrial concerns to be established, the setting up in cities of special areas, for industrial development, the removal of the existing railway workshops from cities, or the existing railway worksnops from enter-supply of housing accommodation to emplo-yees by railways, Government departments and public bodies, improved communications with a view to creating industrial suburbs, and a definite programme of construction to be taken up by local authorities. The findings of other commissions and committees with regard to this question follow similar lines.

Labour Commission's Recommendations.— The Royal Commission on Indian Labour have made several recommendations in connexion with Industrial Housing. These recommendations fall under various categories, (1) Legislative Action by the Central Government; (2) Administrative Action by the Central Government; (3) Logislative Action by Provincial Governments; (4) Administrative Action by Provincial Governments; (5) Administrative Action by public bodies such as Municipalities, Improvement Trusts, etc., and (6) action by Employees'and Workers' organisations. The recommendations under the first head included a suggestion to amend The Land Acquisition Act in such a way as to enable owners of industrial concerns to acquire land for the eroction of workers dwellings. The Government of India introduced a Billin the Legislative Assembly to amend the Land Acquisition Act in the manner suggested and this Bill was passed m 1933, Commussion's The into law into law in 1933. The commissions recommendations under the second head mostly concern Railways, and although the Railway Board agrees on the vital urgency of providing greater facilities for adequate housing it has come to the conclusion that no material advance can be made in this direction at present owing to financial stringency.

The Commission's recommendations with regard to legislative action by Provinces are of very ambitious character They include Town Planning Acts for the Bombay and the Bengal Presidencies providing for the acquisition and lay out of suitable areas for working class housing, the opening up and reconstruction of congested and insanitary areas, the "Zoning" of industrial and urban areas and Government grants and loars to approved schemes. For half thousand scavengers employed are administrative action by Local Governments, the Commission recommend that they should make surveys of urban and industrial areas to make surveys of urban and industrial areas to observation their needs in regard to housing, and provided with adequate housing. According that they should then an ange for conferences with all interested parties in order that decisions with all interested parties in order that decisions have been as to practicable schemes and the methods whereby their cost should be shared. Where suitable Government land is available, their operatives. 7 out of these mills provided Government should be prepared to sell or least to these with a given for build, however within a second of the mills provided feedball accommodation only for employees Government should be prepared to sen or lease to those who agree to build houses within a specified period; and Government should announce their willingness to subsidise in this or other ways employees' housing schemes approved by them. The Commission further recommended that Government should insist that all local authorities should frame byc-laws laying down minimum standards in regard to floor and cubic space, ventilation and lighting and that the Governments themselves should draw up regulations for water supplies, dramage schemes and standards for latunes. For action by Public Bodies, the Commission recommend that the provision of working class housing should be astatutory obligation on every Improvement Trust and that it should be possible to Improvement Trusts to provide land, roads, sewers and sanitary conveniences for new areas but that sanitary conveniences for new areas but that street lighting and water mains should be a charge on Municipalities. Improvement Trusts industrial labour till after the end of the war. A

should be placed in a position to recoup themselves from the enhancement of land values resulting from their activities. It has also been suggested that co-operative building societies and similar activities should be en-couraged. In view, however, of the present acute financial stringency prevailing in all Provinces it is very doubtful whether most of the Provincial Governments will be in a position to do much in the matter of the Commission's recommendations on Industrial Housing.

first Bombay Presidency.- The first attempt to improve housing conditions in Bombay City was made after the plague of 1896 when the heavy mortality and the great exodus that followed paralysed the trade and industry of Bombay. The Bombay Improvement Trust was established in 1898 "for the work of making new streets, opening out crowded localities. reclaiming lands from the sea to provide room for the expansion of the city and constructing sanitary dwellings for the poor and the police. Owing to its limited powers and the various difficulties which it encountered the Trust had to content itself for the first few years of its existence with "slum-patching," the development of a few building sites, the construction of a few chawls and the development of main roads. In more recent years, however, the Trust has been able to do a considerable amount Trist has been able to do a considerable amounts of good work in the direction of industrial housing and has built over 1.300 tenements for housing its own labour and 99 chawls containing about 9,000 tenements in all for housing labour in general. The Bombay Port Trist which engages on an average about 8,000 required workers in all the departments has manual workers in all its departments has provided a commodation for a little over 3.000 of them. The Bombay Municipality has provided a large number of chawis for its employees as will be evidenced by the fact that nearly 75 per cent. of the seven and a in the Watch and Ward Department and the tooms provided were given free of rent. In the 22 mills which provide partial housing for all classes of operatives, the number of workers who lived in the tenements provided amounted to 12,149 out of 64,720 employed. The G. I. P. Railway owns 20 chawls containing 841 one-room tenements and the B. B. & C. I. Railway owns more than 300 one-room tenements for housing their employees. The Labour office of the Govcriment of Bombay conducted an elaborate enquiry into Industrial housing in all perennial factories in the Bombay Presidency Proper in 1934 as a part of the General Wage Census but the results of this investigation were not published at the time when we went to Press.

broad and comprehensive policy was drawn up just after the end of the war by the Government of Bombay under the personal inspiration of Lord Lloyd, then Governor of Bombay, for dealing with the problem. A Development Directorate was formed in 1920 to co-ordinate the various housing activities of Government, the Municipality, the Improvement Trust and the larger labour employing organisations. The original intention of the Directorate was to construct 625 chawls located in 3 industrial centres and to comprise of 50,000 tenements for working classes, within a period of 9 years from 1921 to 1929. The original estimated cost was 51 crores of rupses and a "town duty of a rupee per bale of cotton on all cotton entering Bombay was imposed under the City of Bombay Municipal and Improvement Act of 1920. The scheme was launched at a time when the industrial prosperity of the country was at its zenith and labour conditions in the City were abnormal By the end of 1927, 207 chawls with 16,524 tenements were constructed but only 123 chawls with 8,234 rooms were occupied. These chawls untortunately do not attract industrial labour in Bombay to live in them, the reasons attributed to the failure being the distance of the chawls from the mills, the absence of travelling facilities and other amenities of city life. The average economic rent per tenement worked out at Rs. 16 per month but the actual rents charged were fixed, on an average at barely 50 per cent, of the economic rent and accommodation can now be had in the chawls at Worli at Rs 5 per Singleroom tenement on all floors, except for a corner room for which an extra rupce is charged Rs 2 extra are charged for 100ms in which additional water taps are provided at the option of the tenants. The rents in the Nargaum and Sewij chawls are Rs. 7 per room on all floors and for those in the chawls at DeLisle Road Rs 8 per room per month on all floors. One rupee extra is charged for corner rooms. The rents charged prior to 1st April 1929 were, however, higher for all centres. Frequent strikes in the cotton textile mills and general industrial intrest in Bombay City have been largely responsible for the non-occupation of the rooms in the chawls of the Development Department during the last two years and the figure for the number of tenements occupied on the 31st March 1934 was only 7,343 out of 16,524 rooms available as compared with 8,730 on the Same date in the previous year.

Ahmedabad City.—Probably in no other industrial centre in India is the condition of the housing of the working classes so bad as it is in Ahmedabad, The Textale Labour Union at Ahmedabad published a pamphlet entitled "A plea for Municipal Housing for the Working Classes in the City of Ahmedabad" a couple of years ago for submission to the Ahmedabad Municipality. In this pamphlet the Union deals with 23,706 tenements observed and studied by it. The Union reports that there is absolutely no provision of water in the case of 5,669 tenements 3,117 tenements have a supply of some sort from wells. Even those which are supposed to possess the advantage of Municipal water have a hopelessly lindequate arrangement in this respect—a kap or two in a compound for

a group of 200 or more families. Bathing and washing accommodation has not been thought of except in one or two chawls erected by mills 5,360 tenements had no latrine accommodation. In most of the remaining tenements the Union reports that the arrangements are niserable in quality and grossly insufficient in quantity and that urinals are conspicuous by their absence. Only a few tenements are provided with any sort of drainage. No other drainage arrangement eyists.

The evils of bad housing in Ahmedabad were considerably aggravated as a result of the flood of July 1927 in Gujarat which destroyed over seven thousand houses in the City of Ahmedabad. The bulk of these houses belonged to the working classes. The Umon in the pamphlet referred to, reports that the situation which had arisen in consequence of the flood was grave beyond words. Of the thousands who had been unhoused many came to share with their relatives and friends the accommodation that was already heavily overclowded. Hundreds were altogether without shelter. The relief operations that were then carried out included the construction of huts intended to provide temporary accommodation to a number of those who could make no arrangement of their own. The Relief Committee set up by the leading citizens of Ahmedabad for reconstruction work recommended that the Municipality should take as early steps as possible to construct 5,000 sanitary tenements by raising a loan for the purpose.

In the opinion of the Labour Union the solution of the question of housing constitutes on of the obligatory duties of the Municipality and a growing appreention of this aspect of the housing question on the part of the authorities has led to the incorporation in the City Municipalities Act (1925) under section 71, of a provision permitting City Municipalities to undertake provision of sanitary dwellings for the proper classes. Owing mainly to the efforts of Mr. Guzarilal Nanda, Secretary of the Alimedabad Labour Union, the Alimedabad Municipality has recently decided to construct model dwellings for the working classes and considerable progress is being made on co-operative lines to provide industrial Labour. In Ahmedabad with better housing. In 1932-33, the Vankar Co-operative Society constructed a colony of 22 buildings each containing two semi-detached dwellings at Priyatampur in Ahmedabad. The details of this scheme will be found at page 709 of the June 1931 issue of the Labour Guzette published by the Labour Office of the Government of Bombay.

A Census taken by the Bombay Labour office in the early part of 1931 showed that of 69 mills working in Abmedabad, 34 provided housing accommodation for about 18 per cent. of their employees, the total number of tenements belia 3,708 of which 3,057 are one 100med, mostly 144 square yards in alea with a cubic space of 1,552 cubic feet, the average 1ont of which was Rs. 3-5-3 per month.

supposed to possess the advantage of Municipal water have a hopelessly inadequate arrangement in this respect—a tap or two in a compound for and quality of the housing depend on the cheap-

ness and availability of land. In the more congested areas in Calcutta, Howrah and the nearer neighbourhood housing facilities are not provided on so big or so good a scale as in other areas. Most jute mills provide for their workers rooms constructed in the neighbourhood of the mills at routs varying from annas 8 to Re. 1 per room per month. The sizes of the rooms vary from 8'×8' to 10'×10' and in some cases to 12'×10'. In nearly all cases the rooms are constructed back to back and in most puccases the rooms are constructed back to back and in most puccases the rooms. floors and tiled roofs have been provided with narrow verandahs generally 4' wide used for cooking purposes. Very often the rooms are dark and in none of them can sun light penetrate through. Ventilation is unsatisfactory owing to the method of construction and the only openings in the rooms are the doors. It windows are provided they are kept shut. No chimneys or openings are provided for the escape of smoke in the majority of the houses. Recent enquiries made into the condition of housing in Bengal show that drainage, water supply and conservancy arrangements in bastus are abominable. Government and other public ageneies do not provide housing, as in Bombay, for industrial purposes but some Government and public concerns do provide quarters for their own employees.

Industrial Housing Scheme in Bengal are confined almost entirely to Jute Mills and a few other better organised concerns and the majority of factory owners take no active interest in the development of housing Consequently the improvement effected during the year 1933 have had no perceptible effect on the conditions as a whole under which industrial workers live.

Madras Presidency.—As a result of the exertions of the Labour Department of the Government of Madras, Co-operative Building Societies and a number of local authorities some houses have been built for poor workmen in nouses have been built for poor workmen in Madras City. Out of 1,530 registered factories a little over 280 factories are reported to have provided housing for a small number of their employees Almost all plantation estates in the Nilgiris, Malabar and Colmbatore provided 'lines" for the cooly labour employed. Among recent improvements are a provision of 35 additional houses for the staff of the M. & S. M. Railway Running shed at Pakala, and 15 additional huts at the Chrome Leather Factory at Chrompet.

United Provinces.—Out of 330 regulated factories some 90 make provision for the housing of workmen and their families. Altogether of workmen and their families. Altogether about 6,300 single room and 1,400 double room tenements are provided by the employers including 1,247 tenements provided during the year 1933. The McRobertsganj and Allenganj settlements of the British India Corporation at Cawnpore are two important examples of housing provided by employers for their workmen in that city. A scheme has however been launched by some of the owners of factories in Cawnpore for receiving the second control of the country of th ries in Cawnpore for providing housing for some twenty thousand workmen and their families

dwellings recently built by the Cawnpore Improvement Trust have been much appreciated by all concerned and a steady demand for the purchase of these houses by individual workmen is reported. The Trust is arranging to built more of such dwellings to be offered on a hire purchase system at Rs. 6 per month for 12 years, Except as employers the Government of the United Provinces has done very little in connection with industrial housing. The Improvement Trust of Lucknow has put up a model barrack in the nrea set apart as an industrial area. In the bastis or halas where housing is provided by private landlords the type of tenement available is usually a small the type of tenement available is usually a small mud hut with a room at the back and a room or a verandah in front. The size and height vary. The usual size is  $10^{\circ} \times 8^{\circ}$ . The normal height is 6' to 8'. The only outlet for ventilation is the small main door. Even such tenements of the size of the ments are reported to be shared by 2, 3 or even 4 families and as many as 10 persons may be found as inmates.

Central Provinces.—Housing is provided for about 7,500 workers by some of the larger factories and mills in the Central Provinces.
Twenty per cent. of textile labour and about 10
per cent. of the labour employed in minor
industries is housed. The Pulgaon Cotton Mill maintains a settlement covering an area of 15 acres on which the millhands are allowed to build their own houses on payment of a nominal build their own houses on payment of a nominal ground rent of annas 4 per annum per 100 sq. ft. Probably the most magnificent scheme of industrial housing conceived in India is that launched by the Empress Mills under the agency of Mesers. Tata Sons Limited at Nagpur. These mills have leased a plot of 200 acres at Indora, a suburb of Nagpur, two miles from the mills. The scheme is based on a desire to establish a model village. The idea is to build houses of the bungalow type standing on their own ground in plots measuring 36'×53' with the limitation that building will not be allowed on more than one-third of the space provided. The houses are let to the workers on the hire purchase system and it is expected that many of the workers will ultimately own them.

Bihar and Orissa.-All the collieries in the Jharia coal field are amply and efficiently equiponaria coal neid are amply and emolently equip-ped with approved types of houses. Their design, construction, ventilation and general amenties are governed by the Jharia Mines Board of Health. Workers recruited from villages within five miles from the mine frequently prefer to live in their own villages and walk backwards and forwards to their work. In five colheries employing about ten thousand workers 4,775 houses are provided, five of the worst equipped mines employing 424 workers provide 156 houses and five normally equipped mines employing 3,084 workers provide 1,162 houses. In many cases more than one employee is accommodated in one dhoura or house. Very frequently a man and his wife and his family all of whom may be recorded as separate labourers in the figures of the mining population occupy one house. Every house must be licensed. Licenses are not given unless the but it is still under discussion. Lines of model standards are complied with. If labourers are found in occupation of unlicensed premises the management is liable to prosecution. No rent is however charged and subletting is not known.

The Tata Iron and Steel Works at Jamshedpur have built nearly 5,000 residential buildlags. Of these, 301 are rented at over Rs. 20 per mouth. Sixteen are rated as hotels. The accommodation provided at present is insufficient and one of the problems the Company will have to face is the provision of a larger amount of housing.

Punjab.—Housing conditions of industrial workers in this Province is reported as continuing to show steady progress. Most of the newly constructed factories have provided quarters for their permanent staff. Although at present labour strength of the tactories are housed in factory quarters there has been a distinct advance in this respect in 1933, and in all cases where housing was provided the accommodation was far superior to that which the workers could ordinarily obtain outside the factory premises.

Assam.—Free quarters are provided for all residential employees on tea estates. Such non-resident labour as is employed is casual labour which comes from the adjoining villages and livesin its own houses. In the mines and oil fields free quarters are provided for the labour force employed. A Committee of Inquiry appointed in 1921-22 recommended that endeavours should be made to house immigrants from different provinces together in hamlets instead of putting workers from all provinces undiscriminately into barracks or sines. The main objection to this recommendation is the want of land as all available land is under tea. The housing conditions in the coal and oil fields are reported as being quite satisfactory. In Assam the tea estates are

regularly inspected by District and Sub-Divisional officers. Although the legal powers of interference have been curtailed by the abolition of indentured labour and the repeal of so much of Act VI of 1901 as related to such labour, still in practice the inspecting officers do invariably report on the condition of the lines. They call attention to the need of improvement and the management is generally ready to effect such improvements as are considered necessary.

Other Provinces.—No special remarks are necessary in connection with the question of industrial housing in other provinces. Generally speaking no industrial slums as such or any big urban inflammation due to the presence of agglomerations of factory or other workers is particularly noticeable and the housing of labour is not to be differentiated from the ordinary poor citizen.

Except in those cases where Government action has been definitely indicated, the governments of the various other provinces in India have done nothing for the improvement of industrial housing.

Railways.—The general policy on railways is to provide residential quarters where it is necessary for special reasons to provide accommodation for certain classes close to their work and where conditions are such that private enterprise does not adequately meet the demand for housing the staff. The total expenditure incurred on housing provided by the principal railways since the commencement of operations amounts to nearly twenty-six crores, while the expenditure incurred during the last five years amounts to over seven crores. Notwithstanding this expenditure there is, at present, a considerable dearth of quarters on most railways. Endeavours are, however, continuously made to construct new houses in accordance with an annually pre-arranged programme as funds permit.

### HEALTH.

No satisfactory statistics are available regarding health conditions of industrial workers, eq., monibidity rates among the workers, their average weight, height, etc., and in the absence of any sound statistical data it is not possible to generalise about these matters. The problems associated with health are always difficult, they are much more so in a country where both chimate and the poverty and ignorance of the people contribute to recurring outbreaks of tropical and other epidemic diseases. The main cause of ill-health particularly among the workers in Bombay and Bengal, arpears to be the prevalence of malaria in the localities in which they live. Major Covell, the Special Officer appointed by the Government of Bombay City who submitted his report in 1928, says: "It (Malaria) is still present in certain quarters of the southern portion of the City to a serious extent, but the most intense malaria at the present time exists in the vicinity of the mills, more especially in Worli and Parel sections. In the northernmost portion of

Worli section, malaria is also slight, but as soon as the edge of the mill area is reached the incidence of the disease rises abruptly and extends over the greater part of Worli and Parel. The correlation between the intensity of Malaria and the proximity of mills was most striking, especially in certain cases where a single isolated mill happened to be present, e.c., the Victoria Mill in Chowpaty and the Colaba Land Mill in Colaba. The vast majority of the mills in Bombay are situated in the highly malarious area." The anti-malarial measures taken by the City Municipality have however resulted in a gradual reduction of the number of deaths from undarial attacks.

In the mines in the Madras Presidency, Malaria prevails in the Cuddapah district and at every change of season there is a prevaince of widespread fever. Malaria also prevails in the Thummaragudi mines throughout the year and the cold winds during the rainy season from Sandur Hills affect the health of the labourers in the mines of Tonasigeri. Tuberculosis prevails among industrial workers in the United

Provinces and Bihar and Orissa, and Kala Azar is common among workers in certain tracts like Bihar and Orissa.

The following table gives the birth and death rates and the rate of infant mortality per thousand of the population for some of the unportant industrial centres. The figures, however, relate

to the whole population in most cases and as such are not likely to give an adequate idea regarding mortality, etc., among industrial workers. Besides, in certain cities like Bombay, it is customary for married working class women to leave the city for their confinement and register births in the motussil.

A table showing (a) Birth-rate and (b) Death-rate per thousand of population and (c) Infant mortality for 1,000 registered births for certain important industrial centres.

Cent	re.		Period.	Birth-rate per 1,000 of population.	Death-rate per 1,000 of population.	Infant mortality per 1,000 registered births.
Bombay			1933	26 6	23 1	269.00
Ahmedabad			1929	47 02	49.96	331.65
Sholapur			**	44.03	34 53	228.73
Karachi	٠.	.	**	55 83	30 97	230.55
Nagpur			**	50 63	52 24	290,77
Amraoti		.	,,	59 60	49 14	330.91
Akola	٠.		,,	41 73	35 36	251 27

Health.

As a result, all the new textile mills which have been constructed in Ahmedabad during the last few years are equipped with efficient ventilating and cooling systems and the benefits both to the workers and the processes involved are well recognised at that centre. There has been an extensive "uplitt" in the older mills and there is hardly a mill that has not made efforts in the direction indicated. There has latterly been a marked tendency to increase the pace of improvements in the spinning departments and one group of mills has installed 12 expensive plants that effectively cool and humidity the atmospheres of the spinning as well as of the weaving departments." A few mills in Bombay weaving departments." A few mills in Bombay City have also installed new cooling and humiditying systems. A few other mills provide vacuum stripping apparatus in the carding departments. A plenum system of blowing external air near the workers in the boiling department of a soap factory produced results gratifying both to the worker and the management and it is hoped to extend the method to a iew industries where the removal of surplus heat is a difficult matter. An enquiry made into the effect of employment on the health of the dhobi bleachers in Ahmedabad revealed that although there was little history of illeumatism, some are adversely effected by working with bleaching solutions. Several workers were tound to be suffering turn hyperaemia of the legs, but it was obvious later on that more care was being exercised by the contractors. Most of the dhobi work is done in uncovered tanks in the compounds and no shelters are provided it is said that the men are used to working in the hot Abundabad sun, but even the donkeys used so freely for load carrying take advantage of the shade when they are permitted to do so! The Bengal Reports refer to the question of dust removal in Jute Mills and Tea factories and to the investigations made to determine at what stage dust or fluil mipregnation may be regarded as definitely inpurious It is considered that where exhaust frunk extracting systems are deemed to be essential in all factories in an industry the necessity to instal such equipment should be promulgated by jule. The continued trade depression, however, precluded the issue of a general order by Government. The majority of firms find the initial cost of such installations prohibitive but a few concerns have provided mechanical ventilation in their factories. Although some improvement m ventilation has heen effected during the years 1932 and 1933, the bad design and unsuitability of the majority of the buildings occupied by the smaller factories is stated to be still the chief obstacle to all round progress. In regard to Cotton ginning factories the Punjab Reports, state that "ventilation is far from satisfactory but apart from a drastic alteration in the method of gnning, little can be done to improve ventilation sufficiently to dispose of the dust in ginning rooms; the cost of such alteration is at present prohibitive." The Central Provinces' Reports ments in a large number of estates are supermention that ventilation arrangements have vised by European medical officer. Well-

Working conditions.—The factory department in Bombay has done much work in investigating the efficiency of different humidifying conditions, owners of ginning factories are unable to adopt the expensive system of ducts spinning departments of Mills in Ahmedahad. The provision of ridge ventilation in cotton ginning factories has been a standard practice in the United Provinces in respect of new factories and is reported to have proved satisfactory when combined with a reasonable height of root. Ventilation in other tactories neight of roof. Ventilation in other tactories is steadily improving though the progress is not quite rapid due to depressed trade conditions. The extended use of electricity conditions. The extended use of electricity is steadily improving the general standard of lighting and is commended on with approval in the Provincial factory reports for the year 1933. The factory department in the province of Bihar and Orissa has compiled a little guide book to "Satety, Lighting and Ventilation in small factories," based on photometric observations, in order to help interested persons and builders of factories to so adjust the window area as to secure sufficient amount of natural lighting. lighting.

> Extent of Medical Facilities provided.— The results of a recent enquiry into Welfare work conducted by the Labour Office shows that the provision of facilities for medical attendance and the supply of medicines is fairly general in al. the larger labour-employing organisations in the Bombay Presidency. The Textile Labour Union in Ahmedabad is the only association of employees which provides medical facilities for its members. There are also Government, Municipal or charitable hospitals and dispensaries which are open to the public and which are used by the labourthe larger employers maintain dispensaries but no hospitals. The Dufferin Fund, a private organisation aided by grants from Government and local bodies, maintains female hospitals at the and local bodies, mandains remain hospitals at the more important towns. The Lady Chelmsford Maternity and Child Welfare League maintains in number of centres for child welfare, and, the treatment of maternity cases. Many of the employers in the Central Provinces and Berni have provided well-equipped dispensaries, and medical facilities are within easy reach of the workers in almost all the factories and every important mining area in the Province. Some of the larger concerns in Bihar and Orissa and in the Punjab also provide medical facilities for their employees. In Madras only a few large factories provide dispensaries. Medical tacilities in the plantations are, however, fairly good. All the jute mills in the neighbourhood of Calcutta provide dispensaries but most of the doctors in charge are not registered medical graduates. Owing to manicial stringency the Indian Jute Mills Association were unable to take any action on the welfare survey conducted by a lady doctor m the mill area and leprosy survey carried out by the school of tropical medicine. In spite of the general depression, the Julti Iron Works built a hospital with up-to-date equipment. In all the tea gardens in Assam and in Bengal medical attendance and medicine are provided tor all classes of employees. The medical arrange-

equipped hospitals are also provided for the the Act was Rs 1,35,813. The statistics for the labour force in the mines and oil-fields in Assam. half year ending December 1933 show that out Part-time medical attendance and medicines are provided by the employers in the Asausol Mines Board Area. Medical facilities are also Mining Settlement eight hospitals are main-tained by employers, the number of beds vary ing from 6 to 12 in each ward.

All the Provincial Factory Reports for the year 1933 record a year of normal health amongst factory workers. There was no dislocation of industry anywhere on account of epidemics during the year 1933 except perhaps to some extent in Poona on account of the severe epidemic of plague in that City which lasted from July to October. Continued improvement in general sanitary conditions in the larger factories is reported in all provinces. In Bombay concentration on several factories of the bazzar type has led to considerable improvements and a state in the standard of the second and a state in the standard of the second se rise in the standard of neighbouring smaller concerns not yet amenable to this Act. The lack of municipal facilities for the disposal of trade waste in Ahmedabad is stated to be a cause of insanitary factory surroundings in that area. Conditions in the Dharavi Taimeries in the Bombay Presidency were investigated during 1932 and considerable improvements were effected. There was marked improvement in the sanitary conditions of factories in the Titaghur area in Bengal on account of the successful installation of a sewerage scheme The Bihar and Orissa report for 1932 states that the advisability and possibility of appointing.
Medical Inspector of Factories was under consideration of the local Government The United Provinces Report refers to occasional cases of persons suffering from obnoxions diseases being employed in tood product factories and states that the Medical Officers of Health were asked to give this question attention in their capacities as Additional Inspectors of Factories with a view to stopping the practice A Saintary Inspector was appointed in the Western India Match factory at Tiruvottizin (Madras) to be in charge of the anti-matarial comparing. campaign. A medical officer has also been arranged, appointed at a new factory established in Bombay for the manufacture of lead accumulators

#### Maternity Benefits.

In September 1924, Mr. N. M. Joshi made the first attempt in the Legislative Assembly to introduce a Bill to make provision for the payment of maternity benefits in certain fudustries. Under this Bill, the Local Governments were to be asked to establish a Maternity Benefit Fund and to make payments out of this Fund The Bill, after circulation, was thrown out by the Assembly in August 1925.

The first Province in India to pass a Maternity Benefit Act was Bombay. The Act came into force on 1st July 1929. According to this Act, the payment of maternity benefits is an obligation which is imposed directly on the employer. The Annual Report on the administration of this Act for the year ending 30th June 1933 shows there were 11.7 claims paid per 100 women employed and the total amount of maternity benefit paid under the passed in all Provinces.

of an average daily number of 43,809 women employed in the areas to which the Act applies, 3,110 women applied for benefits and that 2,728 women, or 6.2 per cent, of those employed, were The Bombay Municipality has started since Feb-

ruary 1928, a maternity benefit scheme by which ruary 1928, a maternity nonem screene by which benefit is given to halalkhore and scavenging women in the form of leave with full pay not exceeding 42 consecutive days, including the date of confinement, as certified by the Executive Health Officer, if the birth takes place in Bombay, and by a Police Patel or by hospital authorities if it takes place out of Bombay.

An Act was passed by the Central Provinces Council in 1930 on the same lines as that in Bombay. During the year 1933 benefits amounting to Rs 9 333 were paid to 430 women workers as compared with Rs 12,394 paid to 605 women workers in the previous year.

In Assam, voluntary maternity benefit schemes have been adopted by almost every tea estate of repute. While pregnant women remain at work, they are put on light work on full rates at work, they are put on light work on full rates of pay. During the period of advanced pregnancy and after childbirth leave on half pay is allowed and a bonus at childbirth is often granted in addition. The bonus is in some cases conditional on the child being healthy. The Assam Rallways and Trading Company, the next largest employers of labour in Assam, grants six months' leave on half pay provided the women have been expujined by the medical the women have been examined by the medical officers and attend hospital once a week. Assam Oil Company grants leave on half pay for three months. On some estates in Combatore District female coolies are fed free for a month before and a month after confinement. On other estates maternity benefit ranging from Rs. 3 to Rs. 5 is paid and in some other estates free feeding of the women for two weeks before and three weeks after confinement is

Labour Commission's Recommendations .-Among the more important recommendations made by the Royal Commission on Indian Labour in connexion with the health of the industrial worker are the following .-

- (a) India should have an Institute of Nutrition (The Government of India have postponed action on this recommendation indeimitely for want of funds.)
- (b) Local authorities should construct saul tary markets in all urban and industrial areas.
- (c) Adulteration of Foods Acts should be in force in all Provinces.
- (d) In industrial provinces Public Health Departments should be strengthened to deal with industrial bygiene and industrial disease.
- (c) Women should be appointed to public health staff particularly in the more industrialised
- (f) Comprehensive Public Health Act should

- (h) Every provincial health department, every railway administration and all Boards of Health and welfare in mining areas should employ full time malariologists.
- Government diploma for health visitors should be instituted as the recognised qualification required of all women aspiring to such posts.
- (1) In the larger industrial areas Governments local authorities and industrial management, should co-operate in the development of child welfare centres and women's clinics; and Government should give percentage grants for approved schemes.
- (k) Maternity Benefit legislation on the lines of the Bombay and Central Provinces Acts should be enacted in all Provinces, and
- (l) All methods should be explored that had lead to the alleviation of existing hardships arising from the need of provision for sickness.

Amendment of the Bombay Maternity Benefit Act.—It was represented to Government that the Act requires amendment in certain respects and the Royal Commission on Labour have also dealt with the question of maternity benefit. Accordingly the Governmissed within the provisions of Section 8, if ment of Bombay introduced in the Local she is discharged on account of the closing of the Legislative Council on the 11th August 1933 factory in which she is employed.

- (g) Where piped water supplies are not a Bill to amend the Act. The Bill was referred available special precautions as to purity should to a select committee on the same day and was passed in 1934. The following changes have been made in the Act:-
  - (a) The maximum period for which a woman shall be entitled to benefit is raised from seven to eight weeks.
  - (b) The qualifying period of service is raised from 6 months to 9 months.
  - (c) The benefit was payable in three instalments, one at birth of a child and the other two thereafter. The Act now provides for payments to be made either in two instalments, one before and the other after child-birth or in one lump sum payment atter delivery,
  - (d) There was no time-limit within which the benefit may be clauned. The Amending Act prescribes a limit of six mouths after child-birth.

The Select Committee did not agree to the proposed changes in the rate of benefit and deleted the clauses in the Bill relating to this question

Under their rule-making powers under the Act, the Local Government made a new rule in December 1933 which makes an employer hable for paying maternity benefit in the event of his closing his factory. A woman entitled to materiaty benefit is not to be deemed dis-

#### WELFARE WORK.

### (Excluding Health and Housing).

In 1926, the Government of India requested | all Provincial Governments to collect full and comprehensive information with regard to the measures undertaken and the efforts made to ameliorate the conditions under which the workers live when they are not actually employed. The enquiry originated as the result of the Recommendation adopted by the Sixth Session of the International Labour Conference for the utilisation of workers' spare time. The Labour Office of the Govt of Bombay conducted an enquiry in the Bombay Presidency, the results of which were published in the issue of the Labour Gazette for January 1927.

Apart from the few individual employers who have organised welfare work on modern who have organised welfare work on modern lines, the first organised attempt to introduce welfare activities of a particular type was taken by the Bombay Millowners' Association early in 1930. In a circular letter dated 8th January, 1930, addressed to the mills affiliated to the Bombay Millowners' Association, this Association requested all mills in Bombay City to give their wholehearted coperation to their efforts for devising machinery for the improvement of the relations between for the improvement of the relations between the management and labour by giving immediate effect, wherever it was possible, among other things, to those classes of welfare work which have been uniformly successful, e.g., (a) periodical social gatherings of workpeople; (b) provision of free mill dispensaries as soon as financial considerations permit; and (c) the establishment of creches at all mills.

There were in 1934 nearly 30 cotton mills in Bombay City which provided creches and in one of these mills the creche was for untouchables only. Several of the mills which creches have staffed the creches both qualified nurses and quals Light food such as milk, bisents, etc. is given to the children in 17 cases and in 13 of them change of clothes also is provided for under the new factories Act which came into force from 1st January 1935 it is obligatory on all factories employing more than fifty women workers are ordinarily employed a suitable room shall be provided for the use of children under the age of six years belonging to such women Local Governments are empowered to make rules prescribing the standards for such rooms and the nature of the supervision to be excressed over the children therein. Only seven working mills have no dispensaires for their workmen. A few mills keep patent incidicines only. A large majority of the mills which maintain dispensaries have engaged full-time compounders. The E. D. Sassoon & Company have employed two male doctors and a lady doctor for the benefit of their employees and the company also have a staff for antimalarial propaganda. Nearly a third of the total number of the working mills in Bombay provide night schools for the education of their employees. The Sassoons also offer facilities to the workers for technical education. Facilities for recreation of a regular character such as games, wresting, etc. are provided for by about ten mills. Occasional recreational activities like cinemas, dramas

music, etc., are arranged for in a few mills while | in a few others annual social gatherings are held. Tea shops are provided in a good number of mills while cheap grain shops for the benefit of the workers are run by four mills. The Sasson group of mills allow their workmen to make purchases from their cloth shops at 10 per cent. discount on credit, recoveres being made from wages. The employees of 17 mills enjoy the benefits of provident funds while pension schemes for employees are in force in 9 mills. Co-operative credit societies are established in 23 out of the 65 working mills studied.

More complete and up-to-date information on all welfare items will be available as a result of a very comprehensive enquiry conducted by the Bombay Labour office in 1934 as a part of its General Wage Census programme covering all perennial factories in the Presidency Proper

The Royal Commission on Indian labour have recommended that there should be a more general extension on the part of the employer of welfare work in its broader sense; and that in the larger jute and cotton industrial areas, mills and factories should organise in groups, each establishment having its own welfare centre and health visitor under the supervision of a woman doctor employed by the group.

The All-India Industrial Welfare Conference of 1922 passed a resolution that social service organisations should be asked to take up the work of training welfare workers. The establishments of workers' committees in all industrial establishments was also urged but very little progress appears to have been made so far in this direction.

In the Bombay Presidency except in the case of the Sholapur Spinning and Weaving Mills in Sholapur and the Currimbhoy Ebrahim Workmen's Institute at Bombay, no other employers have employed any special welfare officers of workers to conduct their welfare activities. But Messrs. E 1). Sassoon & Co., Ltd., have appointed a Labour Officer for all their cleven Textile Mills in Bombay City.

In Bihar and Orissa, the Tata Iron and Steel Company has appointed a welfare officer with an office and staff to co-ordinate the various welfare activities that have been carried on by the Steel Company.

In the Central Provinces and Berar, except at the Empress Mills, no regular staff of welfare officer and workers appears to have been appointed.

In the United Provinces, the British India Corporation employ a full-time weltare superindoctors, 5 narses, 8 matrons, 8 compounders, about a dozen midwives, 19 teachers and 2 sergeant patrols.

many of these schools are reported to have been makes an annual donation of Rs. 1,000 for the closed owing to the lack of interest shown by the employees. Except for the facilities for technical training that are provided at the Ichapur Rifle Factory, the Cossipore Gun and its employees.

Shell Factory and the Government Weaving School at Serampore there is little or no organised provision for industrial and vocational training in the industrial centres in Bengal.

The welfare centre inaugurated in Clive Jute Mills made good progress during the year 1933. The Indian Iron and Steel Company, Hirapur, ostablished a Bab Chnic in the charge of a qualified nurse. The Burmah Shell Company's labour bureau and welfare department at Budge Budge continued to do excellent work. An instance of the progress made is stated to be the success of the night school conducted by the department. A number of workmen who attend the school were until recently, absolutely illiterate but now many of them are able to fill up money order forms, write out an address, and read a telegram.

This company has also employed a full time Labour officer to look after the labour employed in their oil installation in Bombay.

In Bombay, the Bombay Municipality has introduced compulsory education in F and G Wards which are cluefly peopled by milliands. In the Government factories at Kirkee, the Kirkee Education Society which is well supported by the factory authorities conducts six night schools. The Gokak Falls Mills Company maintains one night school for adult workers. In Ahmedabad one mill runs a school for halftimers and eight mills maintain schools for workers' children. Thice mills in the Sholapur district and the Government workshop at Dapuri provide for the primary education of halftimers.

The Social Service League, Bombay, maintains several night schools and a Textile Technical School at Parel, for imparting practical and theoretical training to actual mill workers. The Bombay Y.M.C.A conducts nearly night schools with an average daily attendance of about 200. The Ahmedabad Labour Union conducted in 1933, 16 day schools, 10 night schools, one Nursery school, one boarding school for boys and one boarding school for girls.

In Bihar and Orissa, the Tata Iron and Steel Company has established a Technical Institute at Jamshedpur to train in theory and practice certain selected students for positions in the operating departments. The Company also maintains over twenty schools for the education of the children of its employees.

In Madras, seventy factories registered under the Indian Factories Act have provided schools for half-timers and in some cases for employees' children also. The Buckingham and Carnatic Mills maintain a day as well as a night school. The day school is an elementary school with 5 standards and has a technical section attached to it.

In Burma, very few firms provide facilities for lucation. The Burma Oil Company maintains education. The Burma Oil Company maintains schools in the Yenang-Yaung Oilfield for about In Bengal, attempts have been made by some 800 children and proposes to start a night school jute mills to set up day and night schools but for its employees. The Burma Corporation maintenance of the Anglo-Vernacular Middle School at Namtu and is also constructing a school In the United Provinces, the British India Corporation maintains four day schools for boys and girls, two night schools and two industrial classes, for employees. The Elgin Mills at Cawmpore, the United Agra Mills, Agra and the B. N. W. Railway Workshops at Gorakhpur also provide for the education of the children of their employees. The Elgin Mills have built a permanent stage for dramas and purchased a cinema machine for the entertainment of their workers. Mesers. Biegg Sutherland & Co. who are the managing agents for several large concerns, carry on wellare activities in providing schools, it ce milk to supply pupils, dispensatics, gymnasium and sports, library, recreational programmes, etc.

In the Punjab, only the new Egerton Woollen Mills Company, Dhariwal, maintains a school.

In the Central Provinces and Berar, the maintains a Middle Engl Empress Mills in Nagpur have Nursery and primary classes for the children in the creches. a Middle English and a Pi Duning the year 1932, 552 children received children of their employees, primary education in factory schools as against schools for adult labourers.

765 in the previous year, the fall in attendance being due to a general reduction in the number of children employed. CrCeles are attached to six cotton mills and one pottery works in this province. The educational work outside the mills is conducted by the Young Men's Christian Association which has established 9 centres where the mill-workers reside. Of these, 8 centres have night schools. The Empress Mills also make annual contributions of about Rs. 3,500 to other schools where the children of the work-people study.

In Assam, some of the tea gardens maintain schools for children; but these schools are not popular as the labourers are generally recruited from the aboriginal tribes with whom education is at a discount particularly as it interferes with the earnings of their children who find employment in the gardens. The Assam Oll Company maintains a Middle English School and the Assam Railways and Trading Company provides a Middle English and a Primary School for the children of their employees. No industry provides schools for adult labourers.

## Welfare Work on Railways.

Recreation — Railways as a group are the largest employers of labour in India and their welfare work is therefore being dealt with separately. All Railways provide facilities for recreation for their employees and their children. The total number of instantes and clubs which have been provided for railway employees and their children amount to nearly 200 for Europeans and Anglo Indians and over 150 for Indians.

Each institute is regarded as a club provided by the Railway free of rent. The institutes provide a reading room, indoor and outdoor games, etc., and are generally self-supporting atthough grants are made from fines' funds to meet the recurring expenses in deserving cases. The railways also undertake to recover the subscriptions of the members through the paysheets and to remit them to the manager of the institute. The membership of the institutes is compulsory on some railways.

Sports committees and athletic clubs have been formed on several railways, e.g., the G I.P. and the East Indian Railways with the object of promoting athletic sports among the employees and organizing tournaments. The Indian Railway Athletic Association formed for the promotion and development of inter-railway athletic competitions of all kinds is a registered association and its membership is open to the Railway Board and its subordinate offices as well as to railways which are parties to the Indian Railway Conference Association. Inter-district or inter-divisional competitions are also run by local sports' committees with the idea of encouraging sports among all classes of staff. The inter-railway boxing, wrestling and football competitions are arranged in Jour groups. In 1931 the North Western Railway provided a standium within easy teach of the hying quarters of the Railway employees at Moghalbura.

The chema shows and magic lantern lectures which have I en recently organized for the recreation of railway employees are growing in popularity with the staff.

The East Indian Railway locomotive and carriage and wagon workshops, Lucknow, have Welfare Committees which meet monthly and dispose of matters brought forward by the various delegates. Such Committees have also been formed in the Perambur as well as the Golden Rock workshops of the South Indian Railway.

Education.—Almost all Railways provide facilities for the education of their illiterate staffs as well as for the children of Railway employees. The progress made in this direction on each railway may be briefly stated as follows:—

The N.W. Railway have started three experimental schools for adult workers in the running locomotive sheds at Lahore, Sibsur and Kotri. The experiment has so far been confined to the locomotive staff as the majority of the staff in this branch are illiterate and education provides a great inducement in that wages can practically be doubled by qualifying for promotion to the higher grades of running staff. The East Indian Railway provide 37 schools for the employees of the Operating Department. The Eastern Bengal Railway provide 9 night schools for adult employees, the daily average attendance at these schools being 309. On the Burma Railways educational facilities for adult employees, the higher proved a fallure and another experimental school has recently been opened for firemen.

The B B. & C. I. Railway has recently opened classes for imparting instruction in the three R's at 3 centres on the Broad-Gauge and 3 on the Metre-Gauge systems. As an inducement to study, a bonus of Rs. 5 is paid to each man passing a simple test. On the E. B. Rail-

way, the Locomotive Department holds classes at Lunding, Badarpur and Chitagong to assist drivers to qualify as "English speaking" which grade carries a higher pay. The only facilities given by the B. & N. W. Rallway are first aid classes and subjects of a technical nature in the Locomotive Department. The Bengal Nagpur Rallway provides 14 schools for imparting elementary training in reading, writing and rudimentary arithmetic to Indian drivers, shunters and firemen so as to enable them to make themselves personally acquainted with the rules and orders affecting train working. On the M. & S. M. Railway there are two night schools at Hubli and Guntakal respectively both of which receive financial support from the Company.

Schools for the education of adult workmen do not exist on the G. I. P. Railway but a school is established at Bina for imparting technical instruction and conducting refresher courses in Railway working.

For Workers' Children.—The facilities provided for the education of the children of railway employees are as under: -

About 100 schools for European and Anglo-Indian children and 130 schools for Indian children are maintained at suitable centres and the total number of pupils on the rolls is about 5,000 and 16,000 respectively. The total expenditure from revenue on the European and Anglo-Indian schools is Rs. 4 lakhs per annum and on the Indian schools Rs. 14 lakhs. The Railway Department also aids certain schools for children of railway employees The total number of children in railway aided schools is about 4,000 (European and Anglo-Indian) and 8,000 (Indian) and the total annual grants made by the Railway are about Rs. 50,000 to each group. The Railway Department also gives direct financial assistance to its employees towards the education of their children in certain hill schools. The total expenditure on this account in 1927 28 was Rs. 3.5 lakhs for Europeans and Anglo-Indians and Rs. 28-8 thousands for Indians.

children to attend schools.

The present methods of assistance have recently evoked public criticism on the score of their being more favourable to European and Anglo-Indian employees than to the Indian and with a view to eliminating all trace of racial discrimination the Railway Board placed Mr. C. E. W. Jones, C.I.B., I.E.S., on special duty in 1927 with instructions to collect all facts and figures regarding the assistance given by railways for the education of the children of their employees. On a consideration of Mr. Jones' report the Board have now formulated their future policy on the following lines:—

All railway schools would be transferred to local authorities or private bodies, special grants being given out of railway funds where necessary. The assistance given by the Railway Department would be confined to employees who draw pay below a prescribed maximum and to parents who are obliged to send their children to boarding schools. The assistance would take the form of grants to the employees of a fixed proportion not exceeding one-half of the board and tuition fees, the proportion depending upon the pay drawn by the parent and falling with the increase in pay. The assistance would be open to all employees without distinction of community, race or creed.

Several company managed railways have also signified their willingness to adopt a similar policy. But the question is still receiving further consideration because of the representations received in connexion with the scheme.

Co-operation.-The Railway Administration have noticed that heavy indebtedness degrades the employee and impairs his efficiency and they have therefore encouraged the formation of co-operative credit societies and co-operative stores for all grades of employees.

Credit Societies have been Co-operative formed on all railways and are managed by committees generally elected from among the shareholders. But in some cases, the heads of the departments are required to be the chair-Facilities are also afforded by the grant of men of the committees and they have power to passes and concession tickets to chable the nominate some of the members of the committee.

# WAGES.

It was in 1873 that one of the earliest attempts to collect wage statistics in India was made by in all Provinces was obtained except in the issuing instructions to District Officers to submit Central Provinces where an annual return half yearly returns showing the average monthly from District Officers continued. The first wages of certain classes of skilled and unskilled labour. The returns thus collected were utilized wages of certain classes of skilled and unskilled quinquennial wage consuss was held in 1911-12 labour. The returns thus collected were utilized and the second in 1916-17. Statistics regard-for compiling a series of comparable statistics wages continued to be published in "Prices of wages for selected Districts in each Province and Wages" which g. ve the results of the quinquennial wage censuses in respect of a few lication "Prices and Wages" issued annually urban and rural occupations. As the statistics were still refully a few parts of the second in 1916-17.

lication "Prices and Wages" issued annually urban and rural occupations. As the statistics by the Director-General of Commercial Intelligence and Statistics. A reference, however, to Mr. Dutt's Report on an Enquiry into Rise of Prices in India would show that these statistics were found to be wholly unreliable and consequently these half yearly returns from District Officers were discontinued from the properties of India to hold an All-India census of Industrial District Officers were discontinued from the properties of India to hold and All-India census of Industrial Officers, were discontinued from the properties of India to hold and All-India census of Industrial of India to hold an authority co-operation District Officers were discontinued from the properties of India to hold an All-India census of Industrial of India to hold an authority co-operation District Officers were discontinued from the properties of India to hold an All-India census of Industrial

to submit returns or submitted incomplete returns and partly because neither the Central nor the Local Governments were able to provide the staff required for the purpose owing to financial stringency. The annual issues of Prizes and Wester able to the purpose of the staff required for the purpose of the staff required for the purpose of the staff required to the staff re Prices and Wages were also suspended in 1923 as a result of retrenchment and no regular official wage statistics are now published for British India as a whole.

In the United Provinces a scheme for a census of Industrial Wages to be taken along with the regular census was considered but was not carried through. A periodical survey of wages has been carried out every five years since 1912 in the Punjab. These surveys deal with the wages of certain classes of workers in three principal towns, in selected villages unaffected by urban conditions, and at certain Railway stations to secure a means of comparison with rural wages in the same neighbourhood. Beyond the figures of average monthly wages of certain classes of labour submitted by factories in all Provinces every year for inclusion in the annual Reports on the Administration of the Indian Factories Act, no regular and detailed statistics of industrial wages are available. In Madras quinquennial wages censuses have been conducted since 1908 showing the average wages of certain artisans (as well as farm servants emcertain artisans (as well as larin servants em-ployed as agricultural labour) in respect of homogeneous tracts and districts. These cen-suses, however, only relate to rural and urban wages and not to industrial wages. A thorough investigation of the conditions of labour, and particularly the rates of wages on tea estates in Assam, was made in 1921-22 by a Committee appointed by the Government of that Province. The Labour Office of the Government of Bombay conducted three enquiries into the wages of workers in the cotton mills in the Bombay Presidency in 1921, 1923 and 1926 respectively. Early in 1934 there was a considerable agriculture.

because a number of employers either failed (City. The Government of Bombay decided that the Commissioner of Labour should conduct a Departmental enquiry into wages and unem-ployment in the Bombay Cotton Textile Industry and this enquiry covering about a dozen princi-pal occupations in all Mills in the Presidency was launched in March and the Report of the Enquiry was published in Jane 1934. The Government of the Central Provinces and Berar conducted a similar enquiry on parallel lines and the report of that enquiry was published in August 1934 Apart from these enquiries the Bombay Labour Office has also conducted enquiries into (1) Wages of peoples in Bomed enquiries into (1) Wages of peoples in Bombay, (2) Agricultural Wages, (3) Wages of Municipal workers, (4) Clerical Wages in Bombay City and (5) Wages of Printing Press Workers in selected Printing Presses in Bombay City, The results of all these enquiries have been published either in the form of special Reports or in the "Labour Gazette."

The Government of Bombay have now launched a general wage Census which is intended to cover lu about two years, all tactories, transport to cover in about two years, all factories, transport workers, workers in docks, municipalities and building trades, etc. The first part of the Census held for the month of May 1934 covered every perennial factory in the Bombay Prefidency. The enquiry was conducted on the basis of the muster roll and essential information regarding the number of days worked during a pay period by each worker, his rate of wages and his carnings was called for. Seasonal factories his carnings was called for. Scasonal factories will be covered for one month of intensive working during the winter of 1935-36 and all non-tactory industries and organisations will be covered between March and December during the next or the following year. To the best of the knowledge of the Labour Office no other country in the world has attempted an enquiry into wages on such a gigantic scale and the among labour ranks in Bombay City for a Goresults of the Census will be of a far reaching veriment enquiry into alleged large reductions character The Labour office hopes to publish in wage rates in textle mills in the Bombay all the reports covering perennial factories by Presidency, particularly in Mills in Bombay the end of March 1936.

#### WAGE RATES.

Agriculture.—Whether wages paid to agricultural labour in India have kept pace with the increase in the cost of living is, for several reasons, a very difficult question to answer. Firstly conditions vary so markedly between province and province that it is almost impossible to obtain accurate and comparable figures of wages for different classes of agricultural labour. Secondly there exists a variety of methods adopted for remunerating the workers engaged in different agricultural areas in India. For example, in the Punjab, there are four forms of wages, such as (a) purely cash wages, (b) cash wages with supplements which may consist of food, tobacco, lodging, bedding, clothing, etc., (c) purely grain wages, and (d) wages other than in cash or grain. In the Punjab the results of the last quinquennial wages survey which was held in December 1927 show

.. 16 to 32 annas a day. Carpenters .. 16 to 38 annas a day. Masons Unskilled labourers .. 5 to 16 annas a day.

As regards the last occupation it was pointed out that the most frequent wage was between 7½ to 8½ annas. The Labour Office of the Government of Bombay published a Report in 1924 of an Enquiry into Wages in Agriculture which gave the average daily earnlngs of three classes of agricultural labour, wz., skilled labour, ordinary labour and field labour in each of the 26 districts of the Bombay Presidency separately for urban areas and rural areas for each of 23 years from 1900 to 1922. The figures for each year from 1923 to 1933 have that the following were the average daily been published in the Bombay Labour Gazette Bombay Presidency for any particular year for which a comparison is made. This statement requires an important qualification. It is not meant that the money amounts actually paid are similar. The rates of wages in different provinces vary according to the extent of their industrialisation and money wages in provinces which are mainly agricultural are on a lower with the pre-war year shows that during this which are mainly agricultural are on a lower labourer has undoubtedly improved. This

and in the Bombay Administration Reports | tendency in the level of wages which set in The wages prevailing in other provinces 1925 and continued up to the end of 1927 was for similar types of labour do not comchecked during the year 1928 during which period wages of all classes of agricultural labour, except field labour in urban areas and ordinary labour in rural areas, either remained stationary or showed a definite upward tendency, but there has been a sharp tall in agricultural wage rates during the last four years

level than the money wages in Provinces which labourer has undoubtedly improved. This are highly industrialised such as Bombay and is Bengal. There is no doubt whatever that showing the index numbers of daily average wages considerably improved in all parts wages of skilled labourers, ordinary labourers of India between 1918 and 1925. Taking the labourers for the Bombay Presidency as a whole the downward rural areas for the Bombay Presidency.

AGRICULTURAL WAGES (NOMINAL). Index Numbers for the Bombay Presidency (including Sind) 1913=100.

in India are situated in the Bombay Presidency. The main sources of information as regards the wages paid in this industry are the Reports of three Enquiries conducted by the Labour Office of the Government of Bombay into Wages and Hours of Labour in the Cotton Mill Industry in the Bombay Presidency and the two Bombay and C. P. and Berar reports of the departmental enquiries into wage cuts.

It is claimed that the 1926 Enquiry as compared with the previous two Enquiries, was more satisfactory in its method, more detailed in its scope and more accurate and reliable in its results as the information collected related to each individual worker and not to groups of workers in each occupation as was the case in the previous Enquiries. The results of this Enquiry give among other things, figures for average daily earnings of all occupations of average dainy earlings of an occupations octon mill operatives, average monthly earnings for operatives covered in Rombay and Sholapur, the average number of days worked, the number of operatives working 'Full time' i.e., working on all the working days during the Census month,

The Cotton Textile Industry -The most | the percentage absenteersm by departments and important centres of the cotton textile industry details regarding amounts of bonuses secured by the workers.

> Wages in the Bombay and the Sholapur mills are paid monthly irrespective of the fact whether they are based on time rates or piece rates or fixed on a daily or a monthly basis or in any other manner. While in the case of the Ahmedabad mills wages are paid fortnightly or by 'haptas' referring to a period generally of 14 days for piece workers and to a period of 16 days for time workers. Wage periods of a week or 'haptas' of 8 days are also to be found.

Different systems are adopted at these three centres with regard to the methods of calculating wages. In the case of the mills in Bombay City there is first a "basic" rate to which was added a dearness allowance of 80 per cent. for male piece workers and 70 per cent, for male time workers and all female workers. Those mills which grant a good attendance bonus add the amount of the bonus granted, to the gross wage from which are deducted any fines that might be inflicted of operatives working 'Full time' i.e., working before arriving at the net wages payable, on all the working days during the Census month, The term 'basic' in the case of the Bombay the average earnings of those working full time may be generally considered to apply to Individual mills it might apply to any year between 1913 and 1918 in which year the first increase of 15 per cent. was granted as dearness allowance. This was increased to 35 per cent. on the 1st January 1919. The next increase granted on 1st February 1920 was 20 per cent. extra to male workers on time rates and to female workers both on time and piece rates, and 40 per cent. extra to male operatives on piece rates—the total percentages amounting to 55 and 75 respectively. On the 1st November 1920 the 55 per cent was raised to 70 per cent. and the 75 per cent was raised to 70 per cent. During the years 1932 and 1933 most of the working Mills in Bombay reduced wages by effecting cuts in these allowances. There has been no uniformity in the matter and although in some unils allowances of 50 per cent. or less The weighted average cut for the whole industry in Bombay amounts to about 18 per cent.

As a result of the discussions between the Government of Bombay and the Iombay Millowners' Association which publication of the report of the Departmental Enquiry, the Association decided to recommend to all their members the adoption of consolidated rates for workers on time rates of wages. Uniform standard rates were published and these have been adopted by most Mills in Bombay City. Individual Mills were, however, permitted to containe the dearness allowances in the case of workers on piece rates of wages but these allowances were to be increased by five per cent from 1st January 1935 in view of the reduction in Statutory weekly hours from 60 to 54.

In the Ahmedabad mills there is a complete lack of uniformity in the methods adopted for calculating the different additions and deductions before arriving at the final earnings. In Ahmedabad, the unllowners and the local Labours Union were engaged for over a year in examining a proposal by the owners to reduce wages by 25 per cent. After protracted discussions the question was referred to a Conciliation Board consisting of Mr. Chamanlal Paickli, Piesident of the Ahmedabad Millowners' Association and Mr Shankerlal Banker. In subsequent discussions, Mr. Manu Subedar replaced Mr. Banker as the representative of Labour. On the break-down of these negotiations the whole question was referred to Mr Patkar, late Judge of the Bombay High Court, as an unipue; but in the meanwhile the employers and the workers were able through the mediation of Mi M. K. Gandhi at Delin, to reach a satisfactory agreement acceptable to both parties and this agree ment known as the Delhi Agreement was signed by both the parties in the presence of Mi. Patkar in Bombay in Jamiary 1935. Interulia, the agreement laid down a uniform cut of 61 per cent in the wages of all workers on both time and piece rates of wages provided that the earnings of two loom weavers should not be reduced below Rs 41-4-0 for 26 working days. Standardisation of piece rates is to be effected after 1st January 1936 and with a view to provide for a prompt settlement of all wage questions on either side in tuture, the parties were to evolve a scheme for automatic adjustment of wages.

The methods of calculating wages in Sholapur are different from those in Bombay and Ahmedabad. There are five items which go to make the full wage of an operative. These items are (1) the basic rate, (2) dearness allowance which is 35 per cent. in the case of all female workers and all male time workers and 40 per cent. in the case of all male piece workers, (3) the number of grace days granted for which payment is made, (4) boms, and (5) the benefit derived for the grain concession. The Sholapur Millowners decided to reduce wages by 12\$ per cent. with eftect from 1st January 1934, The proposal was met by a violent strike which lasted for nearly Three months but the workers were forced to accept the cit.

As far as cotton textile workers in the Bombay Presidency are concerned the results of the 1926 census of wages in textile mills in Bombay, Ahmedabad and Sholapur conducted by the Bombay Labour office would, to a certain extent still hold good in the average of the cuts effected in Bombay (about 20 per cent). Ahmedabad (61 per cent) and Sholapur (121 per cent) are applied. The following table gives the average daily earnings for men, women, children and all adults employed in textile mills in the three centres mentioned on this basis.—

	Avi	ER!	GE	DA	ILY	EAI	RNL	NG	3 1	or.	
Centre.	Mn	١.	Wo	me	n.	('hi	dro	n	a	All dul	La.
	:	-	¦		-			'			
Bombay A h m e da- bad Sholapur ,	R = a L = 3 L = 5	p 0	Rs 0 0	a 9 11	P 9	Rs. 0	a, 5	p 0	R 1 1	s a 1 3	р 0 4
Sholapur .	0 11	5	0	5	10	0	3	6	0	12	10

The average monthly carnings of workers in different age and sex groups in the Bombay and Sholapur cotton mills, it worked onton the same basis as in the above table, would be as follows:—

Sex an	đ	Ave			nonth s* in	ly :	Ear-
Age gro	up.	Bon	nba	y.	Sho	lapu	ır.
Men Women . Clukhen All Adults .		Rs 30 14 26	a 1 3	p 9 0	Rs 20 8 5 20	a 15 12 0 0	P 0 0 0

\*Similar figures—cannot be worked out for Ahmedabad owing to the admixture of wage payments on the basis of monthly and fortnightly, bi-monthly or 16-day "hapta" payments.

The figures in the table give average monthly carungs after allowing for absenteeism. It is interesting however to ascertain what the average monthly earnings would be for workers putting in tall time, i.e. without remaining absent. The following table gives the figures of

average monthly earnings of full time workers in textile mills in Bombay, Ahmedabad and Sholapur after applying the cuts effected in the last three years, the figures for Ahmedabad being arrived at by multiplying the average daily earnings by 27.

Sex and		Average monthly earnings of full time workers in.										
Age group.	Bombay.	Sholapur.										
Men	Rs. a p. 36 6 0 16 0 0 32 3 0		Rs. a. p. 23 5 0 10 0 0 6 2 0 21 0 0									

The Report of the Departmental enquiry conducted by the Bombay labour office last year into Wage Cuts and Unemployment in the Cotton Textile Industry in all centres in the Bombay Presidency contains a wealth of most valuable information both on wages and the extent of "rationalisation" attempted and effected in this industry during the last few years. The enquiry was conducted on the basis of the sample method and the ten most numerically important occupations which between them cover about 70 per cent of the total number of workpeople employed in the industry were Studied. The results are presented for six centres: (1) Bombay City; (2) Ahmedabad centre; (3) other Guarat centres; (4) Sholapur Centre; (5) Khandesh Centres; and (6) Southern Mahratha Centres. The average daily earnings for the ten occupations studied in these six centres are as tollows :--

Occupation.		Boir bay			lıme aba	d-	Al	ujar excl hme bad	d-	Occupation,			hol		Kha des		1	out! ern Mah ath	-

The real wage index number for cotton mill workers in Bombay in April 1934 as compared with July 1926 was approximately 111, for Ahmedabad it was 154 and for Sholapur for February 1934 as compared with July 1926 was 115.

# Jute Industry.

The jute industry holds the premier position amongst the industries in the Bengal Presidency; The following table gives the average monthly wages of some important occupations in a jute mill. The figures are not the exact averages of wages of the total number of employees in the industry. They are averages obtained from the actual payments made in some representative mills.

		Average mor	thly wages.
Department.	Designation.	Multiple shift.	Single shift.
	Men.	Rs. a. p.	Rs. a. p.
Roving Machines	Rovers	12 15 0 12 6 0	$\begin{array}{cccc} 14 & 7 & 0 \\ 14 & 2 & 0 \end{array}$

#### Gins and Presses.

The male coolies in the gin factories in Madras and the Punjab earn on an average annas 8 per day while the female coolies get only as. 5-1 and as. 6 respectively. In the Central Provinces the average daily earnings of male and female coolies are as. 10-2 and as. 5-10 respectively.

The average daily wages of female press coolies in Madras and the Central Provinces amount to annas 5-10 while those of male coolies amount to annas 9-6 and annas 13-10 respectively.

The Plantations.-Labour in the tea gardens

In addition to the standard daily task which the worker must execute in order to earn his wages (called Harra) the labourer is given an opportunity at certain seasons to supplement his earnings by the performance of a second task the payment for which is known as tieca. In some cases where it is impracticable to prescribe a definite task as in leaf plucking at the beginning and the end of the season payment is made by time. A distinctive feature of work in the gardens is that the labourer usually brings his family with him and the wife and sometimes the children are also wage earners. The joint earnings of a family must always be taken into

has been calculated as consisting of one working man, one working woman, about three-tenths of a working child and non-working child and about two-tenths of an adult non-working dependant. The following table gives the average monthly earnings of the labourers in the tea gardens in Assam in March 1933.

Periods of Wage Payment.—There is a complete absence of uniformity as regards the periods for which payments of wages are made in the various important branches of organised industry in India. In scarcely any industry is there a single period of wage payment. Different systems are found in establishments belonging to the same industry and in the same district and within the same establishment different classes of workers are trequently paid for different periods. The month, the tortnight and the week periods. The month, the forthight and the week that is per cent, of the knowledge are generally the periods of wage payment in Cement and Brick Works, Cotton Ginning and Pressing Factories, Flour Mills and Engineering Works. Monthly payment of wages is mainly week's wages. It is also stated that the extent adopted for workers in Printing Presses, Municipalities, Tramways and Brilways. In the custom. In Rombay City, interest on debts

Cotton Mill Industry wages are calculated on a monthly basis in all the mills outside Ahmedabad. In the case of the Ahmedabad mills, wages of process operatives are calculated on a fortnightly basis and of workers in the maintenance department on a monthly basis.

In mines, tea gardens and rice mills the In mines, tea gardens and rice mills the predominant periods of wage payment are a month and a week. In jute mills wages are calculated per week. Wages are calculated on both the monthly and the fortnightly basis in the Iron and Steel Industry, Sugar Mills and in Tanneries. The system of monthly payment appears to be universal in its application to supervisory and clerical staffs engaged in all different, industrial establishments, while the different industrial establishments, while the most general system in the case of casual labour is of a daily payment of wages.

Periods elapsing before payment —The "waiting period" or the time which elapses between the end of the period for which wages are carned and the date of payment varies considerably from industry to industry and from establishment to establishment in the same industry. It may be generally stated that the longer the wage period the more delayed is the payment of wages. Monthly wages are not paid so promptly as lortuightly wages, weekly wages are withheld for still shotter periods and daily wages of casual labour are nearly always paid on the day on which they are carned or on the following day. Speaking generally the average period of waiting may be considered to be 10 to 20 days in the case of monthly payments, 5 to 7 days for fortnightly payments, and 2 to 4 days in the case of weekly payments. Another factor which affects the period of waiting is the method of payments. Where workers are paid on piece rates, intricate calculations are required to ascertain the amount due, and consequently piece rate wages cannot be paid so promptly as wages of workers on fixed time rates of pay. The payment of Wages Bill under reference to a Select Committee of the Legislative Assembly as we go to Press provides that all wages to factory workers for whatever period they may be calculated, must be paid within seven days of the end of the period for which they are due.

Indebtedness prevails to a very great extent among labourers, but no reliable figures are available except those for the Bombay Presidency which were collected by the Bombay Labour Office during its enquries into the workers' family budgets for different centres. From the statistics of the Empress Mills the percentage of labourers indebted appears to be more than 50. Though exact figures for the Punjab are not available it is reported that the volume of indebtedness amongst the agriculturists is greater than anywhere else in India. As regards urban and industrial labourers it may sately be assumed that a great majority are in debt to their food suppliers. In Madras the indebtedness of the worker is heavy especially in the case of plantations where it is reported that 75 per cent. of the wages of the labourers

forms nearly three per cent. of the total monthly expenditure. Of the families considered for the Labour Office enquiry no fewer than 47 per cent. were in debt. The extent of the indebtedness of the family in debt is ordinarily the equivalent of two and a half mouths' earnings. The extremes were 14 months' and one-third of a month's earnings respectively. As regards single men, for whom 603 budgets were collected, 45 per cent. were in debt, the average expenditure on interest being as 12-3 and the average expenditure on interest for those in debt being Rs. 1-11-2 per month. Enquiries for the Bombay Port Trust workers showed that over 80 per cent. of the families considered were found to be in debt. In the majority of cases the amount of debt varied from a month's income to four months' meome. In Ahmedabad during 1926 about 69 per cent of the families were in debt. The amount of debt varied from a few rupees to many times the monthly meome. According to an enquity made by the Labour Office in the year 1925 into the family budgets of cotton mill workers in Sholapur City, 63 per cent. of the cotton mill workers' families in Sholapur were in debt, the extent of which varied from less than a month's income to many times the monthly meome. In 49 per cent. of cases, however, a family's debt was equal to between one and four months' of its income.

Bonus and Profit Sharing Schemes.— "The successful working of a profit sharing scheme pre-supposes the realisation by the worker of an identity between the various interests engaged in the concern and a conscientious effort on their part to do their best for its maximum success. The employers of labour do not feel that labour conditions in India are such as to justify the hope that this high ideal of coas to factify one note that this light acts of co-operation will be realised in a substantial measure in practice." The only solitary concerns in which profit sharing schemes have been tried are the Tata Iron and Steel Company, and in the Buckingham and the Carnatic Mills. In 1928 the Tata Iron and Steel Company introduced a scheme under which a monthly bonus based on production is paid to all men drawing less than Rs 300 per mensem or Rs. 10 per day, whose work contributes to the produc-tion obtained and who have been in the Company's service for at least six months. In the Buckingham and the Carnatic Mills a bonus is paid to the workmen on a basis relative to the dividend declared.

Bonuses are paid for a variety of reasons, Some concerns grant bonns for regular attendances and for economical utilization of material In some collecties in Bihar and Orissa a worker is paid a sort of bonus for working six days a week. A bonus is also being granted for raising public utility concerns.

and loading extra tubs. The Tata IIon and Steel Company grant bonuses; (1) for general production, (2) for departmental output, and (3) regular attendance. This is paid to all employees drawing less than as. 8 per day. The Company has also introduced a 'Jack pot scheme'. The idea of this scheme is that if 50 men are regulared to perform certain duties. 50 men are required to perform certain duties connected with the operation of any unit and the full force is not present, the wages which would have been payable to the absentees are distributed amongst those present.

The system of paying bonus in addition to a cash wage either for better work or for better attendance used to obtain in several industrial concerns in the Bombay Presidency especially in cotton textile nulls but, except in Ahmedabad where bonuses are paid for better attendance and for better efficiency, the majority of the mills which used to pay such bonuses have either consolidated these bonuses with pay or have abolished them altogether. In countries which have no legislation for the control of deductions which may be made from wages on account of lines, the bonus might be regarded as a voluntary gitt paid by the employer to the worker who attends regularly without absence or produces work better than specified standards but in countries where 'tirck' legislation exists, the bonus easily degenerates into a device whereby an employer tries to get round the Act which lays down percentages of wages beyond which deductions on account of fines shall not be made by dividing the wages into part wages and part bonus. In the Ahmedabad textile mills all weavers who produce 80 to 85 per cent. efficiency on quantity production are paid a bonus of eight annas per loom per fortnight. In this centre all damaged cloth is handed over to the weavers and its cost at wholesale price is deducted from their wages. In the case of minor detects the weavers are fined. As the total estimated bonus of the deductions made from the Ahmedabad weavers' wages both on account of fines and damaged material handed over amounts to more than Rs. 15 lakhs annually, the efficiency bonus is not so profitable to the worker as it would appear to be. The good attendance bonus also operates very harshiy in certain cases. In one nill in Western India, workers earning Rs 30 or under a month are paid a bonus of 4 annas a week for a complete week's work and a further bonus of eight annas a month for a complete month's work. If a worker loses a day he loses twelve annas and if the day lost be a Saturday preceding a closed day he loses two thirtyones of his monthly wages.

# WAGES ON RAILWAYS.

No information more recent to that for the year 1929 is available regarding wages paid on Indian Railways In that year every individual system and the Railway Board, in the memoranda of written evidence submitted to the Royal Commission on Indian labour, gave statistics of lates of pay. The following information, therefore relates to the year 1929 but it is understood that all-round reductions have been made on almost all railway systems grade. during the last two or three years.

Owing to the different types of grades of pay which are prevalent on the Railways it is not possible to give particulars for all of them. Scales of pay of some important classes of indexay servants on some principal railways have therefore been set out in the tables below. The limits of pay given in the tables, show the minimum of the lower grade and the maximum attainable the higher Statement showing scales of pay of important classes of Rasiway servants other than Workshop employees and Colliery Staff on the principal Railways.

Besides the usual pay the employees of the railways are granted allowances and perquisites for special work, climatic and local conditions, etc.

Amount sent to villages.—In the absence of a completely urbanised industrial labour force in India, the practice of remitting part of the wages carned by workers in industrial centres to their place of origin appears to be very common. But no authorised or statistical information for a definite period of the transition of the case of resident families. of time is available as regards the amounts sent by workpeople in this manner. If statistics pertaining to this subject were compiled, it would help a good deal m estimating the agranan contact of Indian industrial workers. In the Central Provinces and Berar 80 per cent. of immigrants from he United Provinces leave their families behind in their villages to look after cultivation. These labourers are reported to be remitting more than 50 per cent. of their income home. The other immigrants in that province from Central India and the Bombay Presidency are said to be sending 25 per cent. of their earnings to theu homes. Estimates of amounts sent by money order by the various post offices in the jute mill areas in Bengal are annually published in the reports of the Indian Jute Mills Association. The figure for 1928 comes to Rs. 1,73,57,816-1-2, but it does not purely represent the amounts sent by Jute mill employees only. Labourers from coal mines in Bengal coming from outside the coal fields are reported to send or take home to their villages from 30 to 40 per cent. of their earnings. In the case of the miner in the mining fields of Bihar and Orissa it is roughly estimated that he sends home all his savings which amount to about 8 annas to Re. 1-8-0 per week. Results of a special enquiry made in the case of an important cotton nill at Cawnpore in which wages are paid fortnightly showed that during the particular period of two weeks covered by the enquiry, 3 8 per cent. of the wages received

the average monthly amount remitted comes the average monthly amount remitted comes to Rs. 2-1-11 which constitutes 4.23 per cent, of the family income which is Rs. 50-1-7 per month. In the case of persons living singly in Bombay City, the average monthly remittance comes to Rs. 11-7-1 which constitutes. 36 2 per cent. of then monthly income. The labour force in Ahmedabad is not immigrant to the same extent as in Bombay and therefore remittances to dependants is not an importantiton in the worker's budget. It appears that nearly 7 per cent, of the working class tambes in Ahmedabad remit money to their dependants living away from them. The average for only those families remitting money comes to its 6-6-9 per month. Sholapur draws its labour force from the immediate neighbourhood and the labour there is not of the same cosmopolitan character as in Bombay. Of the total number of families whose budgets were collected during the family budget enquiry at that centie only 6 per cent. reported that they had to remit money every month to their dependants in villages. The average of the amount temitted by such families comes to Rs 4-12-7.

Deductions. - Deductions from wages account of fines and for services rendered by an employer to his workmen is a subject which has been engaging the attention of the Government of India since 1926. In that year, the Government of India requested all local governments to make enquiries, in their respective by workmen was remitted by money orders through the office attached to that mill. In the course of its family budget investigation, employers in India from their workpeople,

legislative or otherwise to counter any abuses which might be found to prevail. The Labour Office of the Government of Bombay conducted a very comprehensive enquiry into the subject covering all factories, railways, municipalities, transport services, commercial houses, shops, hotels, etc., and the results were published in the form of a special report. As a result of its investigations that Government came to the conclusion that fining was an abuse grave enough to require legislation for its control and recommended accordingly. The subject was again examined in 1928-29 by the Bombay Strike Enquiry Committee (The Fawcett Committee) in comeason with the standardised rules put up by the employers and the demands put up by the workers during the prolonged general stake in the cotton mills in Bombay City in 1928. The Committee recommended inter alm, that deductions from wages on account of fines should not exceed two per cent, of an operative's earnings during a particular pay period. The Millowners' Asso-ciation, Bombay, accepted this recommendation and it is very noteworthy that almost all textile mills in Bombay which are athliated to the Association have limited their monetary punishments within this limit. There is, however, no control on fining in textile mills in Ahmedabad. In that centre the work of 'cutlooking' or scrutimsing manufactured cloth is often entrusted to contractors who often pay a lump sum every year to the mills for this privilege Commissions varying from six annas to twelve annas in the rupee on all fines inflicted is paid amas in the rapec on an innest innested is paid by the mill to the contractor. The system is also closely linked up with that of handing over damaged cloth to the worker concerned and deducting its value at cost or wholesale price from the worker's wages. The cutlooker amount to nearly it not more than fitteen lakhs ob rupes every year. The matter is a grave abuse and a scandal which calls for immediate information legislative action. The action already taken types of my the Government of India in muplementing the

The views of the local governments were also recommendations of the Royal Commission on invited on the desirability of taking any action, Indian labour on the subject have already legislative or otherwise to counter any abuses been dealt with elsewhere in this section.

The Royal Commission on Indian Labour have made several important recommendations in connexion with the income of industrial workers and the question of their indebtedness In discussing the possible application to India of the minimum wage Convention adopted at the 1928 session of the International Labour Conterence, the Commission are of opinion that the convention, "in referring to trades in which wages are exceptionally low, must be regarded as having in view trades in which wages are low, not by comparison with western or other foreign standards but by comparison with the general trend of wages and wage levels in kindled occupations in the country concerned. It the principle of the minimum wage is to be applied to India, they consider that it would first be necessary to create machinery for fixing minimum rates of wages in those trades in which wages are lowest and where there is no question of collective bargaining. The industries indicated for a calciul study of conditions are mica, wool cleaning, shellac, bidi (the in-digenous cigarette) manufactining, carpet digenous eigarette) mannfacturing, carpet weaving and tanneries and those in which there is a strong presumption that the conditions warrant detailed investigation. Full information re, wages and conditions should be collected and if the surveys indicate 'Sweating' the trades should be demarcated and the number and the composition of wage Boards should be decided In the setting up of wage boards iniportant criteria for consideration should be the. cost of enforcement, and a policy of gradualness should not be lost sight of the investigations appear to warrant numbrum wage fixing machinery, the necessary legislation for setting up such machinery should be undertaken, also receive commissions on the value of the These tecommendations are under the considera-cloth handed over it is estimated that these tion of the various Provincial Governments deductions in the Ahmedahad cotton mills and the Government of Bombay have already initiated a general wage census to be completed in about three years in order to collect all possible information on the subject of wages in all types of industrial concerns in the Bombay

# COST OF LIVING AND STANDARD OF LIFE.

The publication of a cost of living index with a pre-war base for the working classes in Bombay City was started in the Labour and the scope and method of its compilation are compilation are described in the issues of the Labour Gazette living index numbers month by month from the compilation are described in the issues of the Labour Gazette living index numbers month by month from the compilation and set is supported by the compilation are described in the issues of the Labour Gazette living index numbers month by month from the compilation and the compilation are described in the issues of the Labour Gazette living index numbers month by month from the compilation are described in the issues of the Labour Gazette living index numbers month by month from for September 1921, September 1923 and April January 1918.

The Labour Office conducted in the year 1926 an enquiry into working class budgets in Ahmedabad and the results of this enquiry have been used in the construction of a cost of living index for that co. Free The Ahmedabad working class cost of living index number has been compiled on a post-war base and has been

published in the Labour Gazette since January 1930. Items representing food, fuel and lighting, clothing, house-rent and miscellaneous groups have been included in the index. The following table gives the index numbers from August 1927 to November 1933.—

Cost of Living Indexes have, during recent years, been compiled for Nagpur and Jubbulpore in the Central Provinces (with January 1927 as base) and for four classes of industrial workers in Rangoon in Burma (with 1931 -100). The monthly figures of the cost of hving Index numbers or these six Indexes during the year 1934 were as follows --

							Ran	goon.	
	Mont	h. — —		Nagpur.	Jubbul- pore.	Burmans	Tamils, Telegus and Oriyas	Hindu- stants.	('hitta- gonians.

working classes in India. The most satisfactory method of obtaining this information is by means of a family budget enquiry in which information is collected regarding the composi-tion, income and expenditure of the family To enable general conclusions to be drawn from investigations of this type it is always necessary to conduct the enquires by what is known as the extensive method, an attempt being made to secure the information from a large number of families so as to minimise the effect of the peculiarities of exceptional cases. The sampling method is often resorted to in conducting extensive family budget enquiries because of the impracticability of collecting data by the census method. It is essential that the sample should be representative m order to yield reliable results.

At the Third International Labour Conference of Labour Statisticians held at Geneva in October 1926, the Committee on family budgets passed a resolution that in order to provide adequate information with regard to actual standards of living, enquiries should be conducted generally at intervals of not more than ten years into the income, expenditure and conditions of living of families representative of large homogeneous sections of the population. It was also decided that for a complete enquiry information should be collected as to the district in which the family resides, the composition of the household, the industries and occupations of members of the family, the nature of the housing accommodation and the amount of each important item of tamily income and expenditure together with quantities of purchases, where practicable. It was agreed, however, that a less detailed investigation omitting the particulars of the family income would be sufficient where the sole object of the enquiry is to provide weights for the calculation of cost of living index numbers.

Family budgets were collected by the Labour Office for 3,076 working class families in Bombay City in 1921-22 and the report based on the results thereof was published in 1923. A new family budget enquiry in Bombay City was above table.

Standard of Life.—Very little information is undertaken by the Bombay Labour office in available regarding the standard of living of the working classes in India. The most satisfactory submitted to Government and will shortly be published. Weights based on the results of this enquiry are to be used in compiling a fresh cost of living index number for Bombay on a new base period. The Labour Office collected 985 budgets of working class families in Ahmedabad in 1926 and 1,133 budgets of cotton mill workers in Sholapur m 1925. The reports based on the results of these enquires were published in 1928. A second family Budget enquiry for Ahmedabad was conducted in 1934 when over a thousand budgets were collected, the figures are in process of tabulation and the report of this enquiry will be published early in 1936. A small family Budget investigation for cotton mill workers in Bombay City was also conducted by the Labour Office in 1930 but the results of this investigation have not been published so far.

> In the United Provinces a number of budgets were collected at Cawnpore with the object of compiling a cost of living index number. But the results of the enquiry were not found to be satisfactory and the province has not been compiling any cost of living index number.

> Statistics Bureau, Rangoon, The Labour which was established by the Government of Burna in 1926, has made an extensive enquiry into the Standard and cost of living of the working classes in Rangoon and the report based on 4,309 budgets was published in 1928. The results of this enquiry have been separately analysed for Burmese, Telugu, Tamil, Uliva, Hudustani, and Cinttagonian workers. Sepa-rate index numbers for each of the different classes of workers have also been published at the end of the report. 1,002 budgets for the working class families in Nagpur and 507 budgets for working class families at Jubbulpore were collected between September 1926 and January 1927 for compiling cost of living index numbers for these two centres. The figures for the Nagpur, Jubbulpore and Rangoon Indexes for the year 1933 have been given in the

# TRADE UNIONS.

The history of trade unionism in India is a for the clerical classes employed in the Bombay history of recent years. It was not until 1918 that labour had began defluitely to organise itself. Previous to that year very little effort appears to have been made to establish organisations of labour. The earliest association of workers in India was the Amalgamated Society of Railway Servants of India and Burmah which had been registered under the Indian Companies Act and its main activities were in connexion with the provision of various benefits to its members, such as Legal Defence, Sickness Insurance, Life Assurance, etc. After the Indian Trade Unions Act, 1926, came into force this Association registered under it as a Trade Union with the new name of the National Union of Railwaymen of India and Burmah. The Bombay Postal Union, founded in 1907, mainly

Post Offices, a Union of wirpers in the Ahmedabad cotton mills formed in 1917; the Clerks' Union, Bombay, established in April 1918 in order to organise the various classes of clerical labour employed in commercial and other offices in Bombay city, and the Madras Labour Union formed in 1918 for the textile workers in the three inles in the city of Madras, were the main labour organisations in existence at the end of the year 1918. In addition, there existed certain benevolent social institutions such as the Kamgar Hitwardhak Sabha and the Social Service League, whose activities were directed towards the betterment of the condition of the working classes. But these Societies were not composed of workers themselves.

The year 1918 may be said to be a landmark in the history of the Indian Trade Union movement, for from that year onwards there has been a more or less steady growth of trade unions despite the inevitable fluctuations in their prosperity. economic circumstances of the time must be regarded as the dominant factor contributing to the establishment of trade unionism in India. In the two years following 1918, the epidemic of industrial strite assumed serious proportions and reached a climax towards the close of the year 1920. The number of labour unions also increased very rapidly and unions were formed of workers in all possible industries and occupations. Most of these Unions were, however, merely Strike Committees brought into existence either before or after particular strikes in order either to engineer of to conduct them. These Committees were either dissolved as soon as their purpose was served or remained dormant until another strike in the trade broke out. Most of the remaining Unions formed during the period 1918-20 were unstable and nearly 75 per cent of them died an early death in the following year There was a definite check to the progress of the trade union movement in India during the next two or three years. But although individual Unions collapsed as rapidly as they were formed the movement itself showed signs of some permanence and vitality.

Perhaps the most important factor which retarded the growth in the movement immediately following the successes which met the earlier formations or Strike Committees, which they really were, was the definitely hostile attitude of the employers to all combinations of their employees. It was not until the passage of the Indian Trade Unions Act which made it morally obligatory on employers to recognise those Unions of their employees which had registered under the Act, that a change in the angle of vision was noticeable.

Nature of leadership.—The Indian Trade Union movement, in its early beginnings, was essentially an economic one, and to regard labour unions as being engineered solely by politicians as the result of their propaganda is to misread the origin of this movement. The Indian workman is predominantly illiterate and has even now few leaders from his own class to whom he can turn for guidance. In consequence, trade unions in India have been led by middle class men, especially professional lawyers and others, who have not perhaps in all cases made a distinction between economic and political considerations. In the words of Mr. A. R. Burnett-Hurst, "social workers did not take the initiative" but "allowed the lawyer-politician class to capture and control these bodies." Many of the so-called leaders of Indian Labour who were drawn from the lawyer-politician class often exploited the ignorance and credulity of the labour force for their own material advantage, or for the propagation of their pet political doctrine, in addition to looking after the welfare of the labourers. There were, however, several notable exceptions. Leaders like Mr. N. M. Joshi, Dewan Chaman Lal, the Rev. C. F. Andraws, Mr. M. K. Gandhi, Mr. V. V. Giri, Mr. B. Shiva Rao, Mr. R. R. Bakhale, M.L.C., effective for the propagation of the premanently.

Mr. Syed Munawar, Mr. C, and Miss Anasuya Sarabhal endeavoured to create Unions for the benefit of the workers and for the general improvement in the conditions of lite and work of the labouring classes. During the last few years, however, the principles of communism were disseminated amongst the masses of India by the members of the Workers and Peasants Party which was an agent in India of the Communist International The Communists took advantage of the economic unrest prevalent in the country early in the year 1928 and usur ped the leadership of the working classes within a short period of time and were able to assume control over the executives of the principal textile and railway unions in Bombay, Madras and Bengal. They captivated the minds of the workers by painting the existing conditions as black as possible and contrasting them with a supreme state of wealth and happiness which is promised under the regime of a dictatorship of a workers' proletariat. The discontentment amongst the workers over conditions of work was aggravated by the incessant preachings of revolutionary doctrines. The credulity of the Indian labourer has been of great advantage to these emissaries of revolution in creating in him a class hatred against the employers and also in instilling in his mind an abhorrence for the Government established by law in the country. These agitators, occupying positions of vantage, instigated several disastrous strikes in pursuance of purely political ends often with a callous disregard of the subsequent sufferings and losses inflicted on their ignorant and hapless dupes. But during the years 1929 and 1930 the workers began to lose their faith even in these Communist leaders after the failure of the prolonged general strike of the year 1929 in the majority of cotton mills in Bombay City. The samty and sobriety of moderate leadership have no great attraction for the large majority of the labouters. The moderate leaders have, however, been fighting their battles for leadership with the extremist revolutionaries, and were for a time successful in keeping the latter under control. Most Communist organisations in India were, however, declared illegal in 1934, their officers were seized and their finds confiscated.

Progress of Trade Unions since 1918.—
The trade union movement spread to various industries and occupations in India during the years following the Armistice, but a number of them passed out of existence very soon after they were started. The moje stable Unions were of clerks, railway workers, postal employees, seamen and textile workers in Ahmedabad. The peculiar feature of the trade union movement in India is that it did not in the early stages of its progress make much leadway in the more important manufacturing industries and this constituted a weak polat in the movement Whereas in other countries, the clerical employees organised themselves on the model of the industrial workers long after the latter had well organised themselves in strong Unions, in India the former have come up if not first, at least simultaneously with industrial unions and have established themselves more nermanently.

The following figures illustrate the progress of the Trade Union Movement in the Bombav Presidency

Year.			No of Unions.	No of Members.	Year.			No. of Unions.	No. of Members.
			1	~					
1922			22	51,472	1929			99	196,748
1923	• •	• • •	19	46,037	1930			93	128,393
1924	• • • • • • • • • • • • • • • • • • • •	• •	36	52,227	1931			97	115,657
1925		• •	38	49,318	1932			100	111,526
1926			56	74,875	1933		• •	105	113,469
1927			72	87,340	1934			105	114,824
1928			94	198,072					

The distribution of the membership as at 1st September 1934 by classes of industries was as follows:--

Class of Industry.		No. of Unions.	Membership.	Percentage of membership to total
Textiles		15	41,182	35.87
Railways (including railway wo	ı kshops)	9	22,444	19,55
Seamen		3	28,228	24.58
Posts and Telegraphs		35	8,424	7 34
Municipal		7	2,693	2.34
Miscellaneous		36	11,853	10 32
То	otal	105	114,824	100.00

There are in addition two federations of Postal Unions, one of Railway Employees' Unions and a fourth which is a Central Union governing a number of individual Umons of textile workers in Ahmedahad. (For the constitution, membership and other particulars regarding these organisations, reference may be made to the issues of the Bombay Labour Gazette) The Central Labour Board and the Bombay Trades Council which had been included in the list of Federations in the Bombay Presidency are now defunct.

The Punjab has no heavy concentration of industrial labour and consequently the extent of organisation among both employers and employed is up to the present little. There is, however, a vague striving among the employed towards co-operation and combination especially for the purpose of demanding better remunera-tion and considering the question of resorting to direct action for enforcing their demands on their employers. No Communist influence has been noticeable in the Punjab where industrial disputes have been stated to have occurred as a result of the normal antagonism between employers and employed. The only large

Associations formed during the general up-heaval following the War and especially during the days of Non-Co-operation have since died or become moribund. Organised labour forms a very small proportion of the total. Organisation of labour outside Cawnpore is almost nonexistent and even in Campore only about 10 per cent. of the labour is organised. There has been a growing interest of labour in trade unionism which appears to have the prospect of a rapid development in the future.

The Central Provinces and Berar have eleven registered trade unions. The classes of workers who have been embraced by the Trade movement in this part of Indian are (1) Textile workers, (2) Press employees, (3) Scavengers, (4) Motor drivers, (5) Railway workers, (6) Postal employees, (7) Bidi makers and (8) Clerks. Trade unionism is stated to be yet in its infancy in this Province and the Labour Unions appear to have done little to improve the conditions under which their members work.

The trade union movement in Madras received a setback in 1921-22 as a result of the failure of employers and employed. The only large mployers of labour in the Punjab are the N -W. Railway Administration, and two out of the 30 registered Unions are of the employees of the various departments of the N.-W. Railway and cover, in all, about 17,500 members.

In the United Provinces, the number of Associations of workers is rather small, compared to its industrial importance. Some of the Industrial Industrial importance is a scheck in 1921-22 as a result of the failure of the strike in the Buckingham and Carnatic mills. During the year 1922-23 most of the mills. During the year 1922-23 most of the smalls, cultion swere dormant and the only Union was the M. and S. M. Railway Workshop Employees' Union, The trade union activities were revived in 1923-24 and the following Unions that the strike in the Buckingham and Carnatic mills. During the year 1922-23 most of the smalls. During the year 1922-23 most of the strike in the Buckingham and Carnatic mills. During the year 1922-23 most of the S. M. Railway Workshop Employees' Union, Terambur, The trade union activities were revived in 1923-24 and the following Unions that the strike in the Strike in th Union, (3) The Corporation Scavengers' Union (4) The S. I. Railway Employees' Union and (5) The Colmbatore Labour Union. The Madras Harbour Port Trust Workmen's Union was revived in 1925-26. A section of the workmen of the Buckingham and Carnatic mills organised a separate Union in 1925-26 called the Buckingham and Carnatic Mills Employees' Union, as a rival to the Madras Labour Union which is an old organisation in the same industry. The Cordite Factory Labour Umon, Aruvankadus, came into prominence during 1926-27. Unions were newly formed for the employees of the Public Works Department workshops and the Government Central Press, Madras, while the Diocesan Press Employees' Union which had remained dormant was revived. The labourers working in the cotton ginning and pressing factories in Tiruppur, Coimbatore District, started a Union for their benefit. Most of the Unions included in their programme a demand for separate representation for Labour und. The Legislative Council The Oil Workers' Union and certain other Unions came into prominence only when there was an impending labour dispute. There were twenty-nine registered Trade Unions in the Madias President of the Covenanted Europeans employed dency at the end of March 1934.

Railways — Labour Unions are, or have been, operation on ten of the Class 1 railways, on some of which as many as three or more operate at the same time. Most of them are registered trade unions and the majority have secured some measure of recognition from the respective railway administrations. Many iailway trade unions came into existence during the period 1918-1921 but several of them were short-lived. Those unions which have managed to survive are actively looking after the interests of their members and show signs of improved organisation and usefulness especially in those where union committees are not dominated by persons with a communistic bent of mind. A noteworthy feature is that there is an increasing tendency in many railway umons to look for office-beaters and leaders from amongst members who are actually engaged in railway work. There can be no doubt that, within the last few years, the appointment of establishment and employment officers and special attention to welfare of railway labour have been due largely to trade union propaganda.

The following is a list of such All-India Federations of Trade Unions or All-India associations of workers for which some information is available.

The All-India Railwaymen's Federation— Though not a registered body under the Indian Trade Unions Act, this Federation has been taking an active part in collective barganing with railway authorities. Having affiliated to it about twelve unions of men working on all but two of Class I railways and with a membership of nearly 1,00,000, it has been able to exercise considerable influence with the Railway Board and arrangements with the Rainval Board and arrangements have been made for half-vealty conferences with the Board for the discussion of matters affecting wages and conditions of service of railway employees as a whole. The tederation is taking continuous interest in bringing railway it had a definite constitution, an elected employees closer together and securing greater.

unity in the trade union movement in the country. At the last annual convention the Federation devoted special attention to the question of reinstatement of retrenched staff, wage-cuts, the proposed statutory Railway Board, etc.

The National Union of Railwaymen of India, Burma and Bombay.—This Union was started by the Amalgamated Society of Railway Ser-vants of India and Burma which came into existence as a sequel to the Great Indian Penınsıla Railway Guards' strike in 1897. It was at first registered under the Indian Companies Act, but after the Indian Trade Umons Act came into being, it altered its name, redrafted its constitution and registered as a Trade Union It has a membership of about 4,575. It provides tor its members various voluntary and other benefits such as death, sickness, unemployment and lite insurance benefits. It is one of the few unions in India which maintains a political

limited to covenanted Europeans employed as foremen in railway workshops in India, was started in October 1926 with the object of securing for its members the benefits of the Ice Commission's recommendations. It submitted a memorial to the Viceroy on this question in November 1926 It has a membership of about 300 employees scattered all over India and it originally had its Head Office in Bombay The Association registered with the Registrar of Trade Unions, Bombay Presidency, in March 1928, but transferred its Head Office to Punjab in 1929 and again to Madras during the year 1932-33.

The All-India Trade Union Congress—
This organisation was mangurated in 1920 for two main purposes (1) to co-ordinate the activities of the individual Labour Unions in india which till then remained incohate and were unable to take concerted action and (2) to recommend workers' delegates to the International Labout Conferences. When the Government of India had to select a Labour representative to attend the Washington Conterence in 1919, there was no representative body of labour in India to be consulted and they therefore appointed Mr. N. M. Joshi as the Workers' Delegate. In order, therefore, that responsible Labour opinion in India might have a voice in the selection of the delegates to the International Labour Conferences, the All-India Trade Union Congress was organised and the first session of the Congress was held in Bombay on the 31st October 1920. Eight bundled delegates from different parts of India were present and sixty Unions were affiliated and 42 others expressed their sympathy with the Congress. It became a central organisation of the trade union movement in India but from the beginning it had a strong political colour. Its presidents and secretaries have all been politicians first and labour leaders next, with the exception of a few persons like Mi N. M. Joshi. The Congress appointed respective provinces. The main object of the Congress was "to co-ordinate the activities of all the labour organisations in all the provinces in India and generally to further the interests of Indian labour in matters economic, social and political."

The second Session of the Congress was held in 1921 at Jharia under the Presidentahip of Mr. Joseph Baptista. The third Session was held at Lahore in 1923 with Mr. C. R. Das as President. The fourth Session held at Calcutta in 1924 was also presided over by Mr. C. R. Das. Out of the 43 resolutions passed at this Session some dealt with the recruitment of Seamen and their eligibility for securing compensation under the Workmen's Compensation Act. The fifth Session was held in Bombay in 1925 with Mr. Dhundiraj R. Thengdi of Nagpur in the chair. Mr. V. V. Girl of Berhampur was the President of the sixth Session held in Madras in 1926. Delhi was the centre where the seventh' Conference of the Congress was held in 1927 and the President was Rai Saheb Chandrika Prasad. Dewan Chaman Lall, M.L.A., was the President of the Cawnpore Session of the Congress held in 1927. The ninth Session was held in 1928 at Jharia with Mr. M. Daud in the chair It is significant that at this Conterence Pandit Jawaharlal Nehru moved a resolution protesting against imperfalsim.

The tenth assembly of the Trade Union Congress which met at Nagpur in 1929 under the presidentship of Pandit Jawaharlal Nehru will remain as the most important land-mark in the history of organised labour in India. It marked the culmination of a long period of mischievous the culmination of a long period of mischievous activity inspired by Moscow and formented by Communist Agents in India resulting in a split between the genuine trade union leadership on the one hand and the votaties of communism on the other. The tundamental issue upon which the split in the Trade Union movement occurred was whether the labour movement in India shall be inspired and conducted for the betterment of the industrial conducted for the betterment of the industrial workers or whether it shall be utilised as a means to promote and bring about revolution in the country. The proceedings at the Session made it impossible for the rival forces to carry on any longer under a common organisation and the Executive of the Congress was captured by the revolutionaries, and resolutions for the boycott of the Royal Commission on Indian Labour, affiliation of the Congress to the League against Imperialism, the appointment of the Workers' Welfare League, a Communist organisation in England, as Agents of the Congress for Great Britain and the boycott of the International Labour Conferences at Geneva were passed both by the Executive Committee and the open session of the Congress. The moderate leaders of labour, including Messrs. N. M. Joshi, V. V. Giri, B. Shiva Rao, R. R. Bakhale and Dewan Channan Las seconded from the Congress and set up a separate federation under the name of the "All-India Trades Union Federation" in order to co-ordinate the activities of non-communist Trade Unions in India. Endeavours made to draw the seceders back into the fold of the All-India Trade Union Congress have not met with any success. The Labour Unions in Ahmedabad

which draw their inspiration mainly from Mr. M. K. Gandhi and are the best organised amost successful trade unions in India have not during the sixteen years of the Trade Union movement in India shown any desire to become affiliated to the Congress,

The eleventh Session of the Trade Union Congress, held in Calcutta in July 1931, led to further disintegration in the ranks of labour and once again the Communists from Boinbay were responsible. The Girni Kamgar Union had split into two parts, both litterly opposed to each other. One led by Mr. S.V. Deshpande, General Secretary of the Trade Union Congress and the other by Mr. G. H. Kandalkar, President of the G. K. U. and a Vice-President of the Congress and both groups claimed to be the Girni Kamgar Union and therefore entitled to vote at the Congress. The President, Mr. S. C. Bose, a Congress politician, decided in favour of Mr. Kandalkar whereupon Mr. Deshpande and the representatives of a few other unions broke away from the Congress with the result that this organisation which should guide and control the Trade Union movement in India is a useless and effete body with no influence and a trifting membership.

The twelfth Session of the Congress was held at Madras on 10th and 11th September 1932 under the presidentship of Mr J. N. Mitra. The report of the General Secretary stated that twelve new Unions from Madras affiliated themselves to the Congress and that the membership of the Congress covered Unions with more than a lakh of organised workers. The Conference adopted resolutions demanding the miniedate and unconditional release of all the political pisoners including the Meerit undertrials, condemning leaders like Messrs. Jannadas M. Mehta, V. V. Giu and N. M. Joshi for postponling a general strike on railways, and adopting the platform of unity formulated by the Bombay Girdi Kangar Union which included class struggle as one of its main planks.

The thirteenth Session opened at Cawinpore on 23rd December 1933. Mr. G. L. Kandalkar of the Bombay Girin Kanigar Union presided. The president declared that the Trade Union Congress would participate in the political novement only on condition that key industries like Railways and Banks were nationalised and their control transferred to councils of workers. There was a free fight between the votaries of the Indian National Congress which is a purely political body, and labour leaders and a pandomonium resulted. Several resolutions were passed at this session one of which authorised the Bombay Girin Kanigar Union to take steps to organise an All-Inda Textile Workers. Conference in Bombay to consider the question of wage-cuts in the textile industry and concert measures to detend the cause of the workers. Pandit Hariharnath Shastri of Cawinpore was elected President for 1934.

The National Trades Union Federation — The Indian Trades Union Federation which was formed in 1929 by moderate leaders of labour like Mr. N. M. Joshi and others after the split in the Nagpur session of the All-India Trade Union Congress, held its first annual session at Madras on July 16 and 17, 1932, with Mr. V Va lation, negotiation, propaganda, etc., and, in Girl as President. The Federation claimed the last resort, by strikes and similar other allegiance of 40 unions in various parts of the country including Native States and a total membership of 78,000. The Conference adopted the provisional constitution of the Federation framed by the Committee of management and also considered the question of trade union unity.

Almost from the time of the unfortunate split which occurred at Nagpur in 1929, the necessity of bringing about trade union unity has been felt in almost every quarter. Efforts have been made since 1930 to bring the different groups together informally and to try to find a reasonable basis of agreement. Some Bombay unions formed a 'platform of unity' the main planks of which were (1) that the Trade Union is an organ of class struggle involving purely direct action , (2) that the Trude Union Congress should not be affiliated to the International Federation of Trade Unions, Amsterdam, and (3) that delegates should not be sent to the International Labour Conferences. In these efforts the railway unions which had remained aloof from the two rival national organisations took very great interest and the All-India Railwaymen's Federation convened in Bombay a representative conference in May 1931 when a committee was appointed for the purpose of considering and reporting upon the best methods of bringing about unity in the ranks of Indian labour. The platform of unity referred to was particularly examined by this committee whose suggestions for amendments were not approved by the extremist labour leaders belonging to by the extremist labour readers belonging to the All-India Trade Union Federation at its first session held in Madras however welcomed the efforts made by the Trade Umon Unity Conefforts made by the Trade Union Unity Conference held under the auspices of the All-Inda Railwaymen's Federation and authorised its working committee to co-operate with other unions in facilitating the reconclination of differing points of view. A special session of the All-India Trades Union Federation was held at Calcutta in April 1933 for the purpose of considering the question of Trade Union unity appears other subjects and a receiption. amongst other subjects, and a resolution was passed authorising the General Council to negotiate with the Provisional Committee of the National Federation of Labour (a new national trade union organisation formed by certain leaders of labour) on the question of trade union unity with a view to bring about amalgamation between the two organisations on a fair and equitable basis. As a result of these negotiations, the National Trades Union Federation came into existence on and from 10th May 1933 in place of the All-India Trades Union Federation and the National Federation of Labour.

The main objects of this Federation are: (a) to establish a socialist State in India, (b) to socialise and nationalise the means of production, distribution and exchange as far as possible, (c) to ameliorate the economic and social conditions of the working classes, and (a) to support and actively participate in the struggle for India's political freedom from the point of view of the working classes by all legitimate, peaceful and democratic methods such as legis-

the last resort, by strikes and similar other methods. Each affiliated union has to pay to the Federation an annual tee of Rs 20 for 2,000 members and below, Rs. 10 for every additional 1,000 members or less upto 10,000 and Rs 5 for every additional 1,000 members or less above 10,000.

The first session of the National Trades Union Federation was held in Bombay on the 24th to 26th Dec. 1933 with Mr. Mrinal Kanti Bose, the President of the Federation, in the chair. number of unions affiliated to the Federation was reported at 50 and the total membership of individual members at 1,37,000. It was resolved to organise an All-India Textile Labour Federation to resist the employers' attacks on the workers in the textile industry, and to provisionally affiliate the National Trades Union Federation with the International Federation of Trade Unious for a period of two years in the first instance.

There was a split in the Federation at its first session held in Bombay The representatatives of several Bengal Unions walked out of the conference on the 26th December 1933 in consequence of differences of opinion between them and Mr N. M. Joshi and held a meeting on the same day under the presidency of Mr. Abdul Ghani and resolved to form an All-ludia Federation of labour with the name and style of the All-India Trades Union Federation with headquarters at Calcutta, Mr. M. Daud, M.A., Bar, at-Law, was elected President. It was proposed to draft a constitution and place it for adoption before the next session to be convened at an early date. Six unions, all situated in Bengal, with a total membership of 15,000 promised affiliation to the new body.

There are, in addition, the following All-India Associations in existence ·

(1) The All-India Postal and R. M. S. Assocation, (2) The All-India Postaren's and Lower-Grado Staff Union, (3) The All-India Telegraph Union, (4) The All-India Post and Telegraph Administrative Offices Staff Association, (5) The All-India Government Employees' Federation, (6) The All-India Currency Association, (7) The Central Body Military Accounts Association and (8) The National Federation of Textile Labour in India.

### Trade Union Legislation.

In 1920 a Company owning a mill whose workers were on strike brought a suit against the leader of the local labour union which was conducting the strike and others, seeking to restrain them from inducing the plaintiff's workmen to break their contracts, and suing for damages for their actions in this respect. Madras High Court to whom the suit was referred gave their decision granting an interim injunction restraining the defendants from inciting the plaintiffs' employees to continue the strike. The case was eventually withdrawn but the proceedings suggested that, in the absence of legislation, even legitimate trade union activity was attended by considerable peril. As a result of a resolution moved by Mr. N. M. Joshi and accepted by the Legislative Assembly in March tive proposals and circulated them for eliciting public opinion. The opinions expressed were by no means unanimous,—some considered the proposed legislation premature, whilesome others realised that legislation was necessary but at the same time considered Trade Unions as a pernicious and dangerous growth which should be rigidly controlled, and others again urged that sufficient protection should be granted to them. In August 1924, the Government of India circularised a draft Bill for opinion. The Bill conferred certain privileges only on registered Trade Unions and left the question of registeration at the option of Trade Unions themselves. Provision was also made to ensure that the funds of a registered Trade Union are not expended on causes in which the bulk of the members have little interest. A regular audit of the funds was proposed to be made compulsory and the manner in which the executive should be composed was also provided for.

A number of amendments were made by the Select Committee and in the Legislative Assembly. A clause permitting registered Trade Unions to maintain funds for political purposes was added. The provision was on the model of the British Law on the subject and those members who contracted out of the liability to subscribe were not to be compelled to contribute to the Political Fund nor did fallure to contribute involve any disability or disability disability or disability disa advantage except in so far as the control and management of the Political Fund was concerned. The Bill was passed on the 8th February and received the assent of the Governor-General on the 25th March 1926, The Indian Trade Unions Act came into effect from the 1st Juno 1927.

Mr. N. M. Joshi introduced in the Leislative Assembly on the 9th February, 1928, a Bill to amend Section 43 of the Indian Penal Code in order to extend to the officers and members of unregistered Trade Unions the protection afforded by Section 17 of the Indian Trade Unions Act, 1926, which lays down that no officer or member of a registered Trade Union shall be liable to punishment under sub-section (2) of section 120B of the Indian Penal Code, in respect of any agreement made between the members for the purposes of furthering any such object of the Trade Union as is specified in Section 15, unless the agreement is an agreement to commit an offence. The Assembly, however, threw out the Bill.

A Bill was introduced in the Legislative Assembly on the 4th September 1928 with a view to amending Section 11 of the Indian Trade Unions Act, 1926. It was pointed out in the Statement of Objects and Reasons that the existing section 11 of the Act admitted of doubt in two respects namely: (1) It did not indicate clearly whether the first appeal lay to the judge appointed for the area within which the Registrar's office is situated or to the judge appointed for the area within which the head position is also satisfactory. Organisati among women-workers in India continues amendment was intended to make it clear that the

1921, Government were committed to take steps latter is the competent court; (2) It did not as soon as practicable to introduce such legislation as might be necessary for the registration and protection of Trade Unions. The Government and an accordingly, formulated certain tentative of India, accordingly, formulated certain tentative control of the it clear that in such areas the appeal lies to the High Court and there is no second appeal. The opportunity was also taken to define clearly the powers of the High Court in second appeals. The Bill was passed and received the assent of the Governor-General on 25th September 1928.

Working of the Act.—The Act has now been in operation for nearly eight years. All-India Statistics on the working of the Act for the year ending 31st March 1933 published in August 1934 show that there were 170 registered trade unions in British Provinces in the en trade unions in pricial Frownices in whole of India during the year ending March 1933 as compared with 131 registered unions during the year ending 31st March 1932. The distribution of the registered Trade unions together with the figures for total membership for all unions which submitted returns is as follows :-

Provinces.		Total No. of Unions regis- tered.	Total member- ships of regis- tered Unions.
Ajmer-Merwara		2	34
Bengal		31	71,860
Bihar and Orissa		4	2,397
Bombay		44	64,169
Burma		1	115
Central Provinces		11	7,305
Delhi	\	10	11,749

of employees or the existence of rival Unions are not sufficient grounds for refusing recogni-tion. With regard to the internal administra-tion of Trade Unions the Commission recommend that Union leaders should endeavour to give as many members as possible some share in the work of the Union and that Trade Union organisers should endeavour to find suitable men within the Union to act as officials and should train them for the position.

With regard to the Trade Unions Act, the Commission recommended that it should be re-The figure for 1932-33 represents about 2 per examined during the year 1934 and that all tered Unions and their officers should be reconsidered so as to ensure that the conditions

#### INDUSTRIAL DISPUTES.

The weapon of the "strike" in industry first came into prominence in India during the period immediately following the close of the War when the majority of the strikes as shown in the introductory Section were designed to secure increases in wages commensurate with the rise in the cost of living. The epidemic of industrial strikes which characterised the period 1919-20 reached a climax in the winter of 1921. During this period strikes took place purely from economic causes and most of them ended successtully from the view-point of the workers, after a short struggle. After this period, however,

they tended to be more prolonged and less successful and, partly owing to political causes, there were a number of fairly serious disputes in public utility services. In more recent years the machinations of the Communists have been increasingly responsible for the calling of general strikes and their undue prolongation.

Extent of Disputes.—All-India statistics of industrial disputes for each quarter and for each year have been compiled and published since 1920 by the Government of India in the Depart-ment of Industries and Labour.

The following tables show the number of disputes which occurred during the nine years 1925-33 in each province and in each class of industry respectively :-

The peak in respect of the number of industrial | other provinces was there less than an average for at least one dispute per month during that year. The industry which was hit hardest was the cotton and woollen mill industry in which no less than 110 disputes took place during the year.

In 1933, 164,938 work people were involved in the 146 disputes and 2,168,961 working days were lost.

# CONCILIATION AND ARBITRATION MACHINERY.

as an All-India measure early in the year 1929, there was, with the exception of a conciliation panel in Bengal, which will be dealt with lower down, no official maclinery for conciliation and arbitration in industrial disputes in India. The Employers' and Workmen's (Disputes) Act which was passed in 1860 to make provision for the speedy termination of certain disputes letween workmen engaged in railway and other public works and their employers and which was extended, in case of the Bombay Presidency, to the districts of Ahmednagar, Broach, Ahmedabad, Kairs, Poona, Sholapur, Surat and Thana in 1860 and 1861 and to Sind in 1872 dealt with individuals and did not provide any machinery for the settlement of disputes in other trades or industries. No records are available to show the extent to which this Act was made use of in India. The Act was repealed in March 1932. The only provinces in which ad hoc Committees have been appointed during the past fifteen years either to enquire into the question of providing machinery for the settlement of disputes or to deal with specific strikes are the Bengal and the Bombay Presidencies.

Meed as Chairman "to consider and report on the limes of the Industrial Courts Act, 1912. The practicability or otherwise of creating machinery of princing obtained by provincial Governments for the prevention and early settlement of industrial disputes." This Committee made properly organised and that therefore no useful several recommendations with regard to the several recommendations with regard to the standardization of wages, trade unions, the tradition and the three organization of the provincial Governments attitude employers should adopt towards adopted the same view.

Prior to the passing of the Trade Disputes Act | Unions of their workers and the recognition of an All-India measure early in the year 1929, | Unions, Works Committees, Welfare Work | Co-operative Societies, Housing of Labour, etc. Their recommendations were in the nature of measures that might contribute to the prevention of industrial disputes. With regard to the methods of settlement when such disputes either develop irreconcilable differences capital and labour or else become a menace to the community, the Committee recommended the formation of an Industrial Court of Enquiry to be followed, if necessary, by an Industrial Court of Conciliation.

In pursuance of the recommendations made by the Industrial Disputes Committee, the Government of Bombay published a Bill to provide for enquiry into and settlement of trade disputes in the Bombay Government Gazette in May 1924. It was intended to introduce this Bill in the Bombay Legislative Council at the Poona session in July of the same year; but, in the meanwhile the Government of India asked the Local Government not to proceed with this measure because they themselves intended to introduce similar legislation for the whole of This, however, was not the first occasion on which the Government of India considered the question of the advisability of introducing legislation to provide for the settlement of disputes. In 1920 they circularised all Local Bombay Presidency.—The first committee of disputes. In 1920 they circularised an local was the industrial Disputes Committee appointed on the 18th November 1921 with Sir Stanley advisability of providing legislation on the Reed as Chairman "to consider and report on the lines of the Industrial Courts Act, 1919. The opinions obtained by provincial Governments asking their opinions as to the opinions obtained by provincial Governments asking their opinions as the Industrial Courts Act, 1919. The opinions obtained by provincial Governments asking their opinions as the Industrial Courts Act, 1919. Bonus Dispute Enquiry Committee.—The next Committee to be appointed by the Government of Bombay was the Committee of Enquiry with Sir Norman Macleod, as Chairman to enquire into the general strike of the Bombay cotton mill workers of the year 1924 in connexion with the non-payment of an annual bonus for the year 1923 by the Bombay mills.

The findings of the Committee were :-

- That the mill workers had not established any enforceable claim, customary, legal. or equitable, to the annual payment of a bonus; and
- (2) that the results of the working of the mill industry as a whole for the year 1923 were such as to justify the contention of the millowners that the profits did not admit of the payment of a bonus.

Bombay Strike Enquiry Committee —The third ad hoc Committee to be appointed in the Bombay Presidency was the Bombay Strike Enquiry Committee under the Chairmanship or Sir Charles Fawcett, Judge of the Bombay High Court, in connection with the general strike of the cotton mill workers in Bombay city of the year 1928 in pursuance of the agreement arrived at between the Bombay Millowners' Association and the Joint Strike Committee at a conference held under the Chairmanship of the Hon. Sir Ghulam Hussain Hidayatullah, General Member of the Government of Bombay, on the 4th October 1928.

This Committee sat for a continuous period of five and a half months and its Report was published on the 26th March 1929.

Some of the conclusions and recommendations of the Bombay Strike Enquiry Committee were as follows:—

- (1) The proposals of the Millowners' Association (a) for standardization of wages, duties and numbers of operatives in a mill and (b) for Standing Orders for the operatives about the conditions of their employment were in the main fair and reasonable.
- (2) While there was justification for the Association's proposal to make a cut of 7½ per cent. In weavers' wages, there were reasonable objections to be urged against its adoption in the present circumstances and it was recommended that it should be dropped by the Association provided the Labour leaders undertook to co-operate in working the scheme for the standardization of wages.
- (3) That part of the standardization scheme which is called the "Rational" or "Efficiency" system and which aims at reducing the number of operatives employed in mills while raising their wages and providing conditions favourable for the extra efficiency expected from the operatives was fair and reasonable.
- (4) With regard to the Seventeen Demands submitted by the Joint Strike Committee some of the demands which were considered to be fair and reasonable were—

- (a) That the Millowners shall not vary any of the present conditions to the disadvantage of the workers before securing the approval of the workers through their organisations.
- (b) That the Millowners' Association shall not permit its individual members to vary the conditions of service to the disadvantage of the workers without the sanction of the Association.
- (c) The rates of new varieties shall be fixed by the Millowners' Association in consultation with the representatives of the Workers' organisations.
- (d) Notices in vernacular showing the rates of piece work in detail should be posted in the Departments for the information of the workers.
- (e) That there should be no victimisation of men who had taken part in the strike or any Union activities.
- Most of the above were eventually conceded by the Millowners' Association.
- (5) The following demands were held to be unfair and unreasonable--
  - (a) The wages of those workers whose average monthly wage is less than Rs. 30 should be raised substantially.
  - (b) The newly introduced system of compelling the workmen (1) to take out and present tickets of attendance and (2) to clean machinery daily should be discontinued.
- (6) The recommendations of the Committee for allevlating unemployment consequent on the introduction of efficiency methods of work were as follows —
  - (a) The millowners should set up some machinery for taking note of all cases where workers are discharged on account of reduction of staff, and help them as far as possible to get suitable employment either in some other mill or in some other industry.
  - (b) The Millowners' Association should consider the advisability of a scheme for the payment of a gratuity to a worker, which may amount to say, four weeks or six weeks' wages, according to his length of service payable in suitable cases to discharged employees who may need help during the walting period while they are seeking employment. The formation of an Out-of-Work Donation Fund on a voluntary basis to be created by a system of setting aside a contribution by the Millowners of one anna per operative per month to which fund the operatives through their representatives should be invited to contribute one anna or at least half an anna per head per month was suggested.

- arrange for the assistance of an expert technical adviser in dealing with disputes arising under the Standardisation Scheme.
- (8) In view of the fact that several matters required adjustment in connexion with the scheme for wage standardisation after it had been brought into operation and with a view to avoiding strikes and lockouts, machinery was provided by "Mediation Rules" agreed to by both sides for setting up joint Committees to enquire into disputes arising under the scheme and to endeavour to arrange tor their settlement.

Owing to the undue prolongation of the general strike in the Bombay Cotton Mills of the year strike in the isomony cotton aims of the year 1929 and the consequent disruption of labour, it was not possible for the Bombay Mill-owners' Association to bring into operation the Mediation Rules recommended by the Bombay Strike Enquiry Committee for the simple reason that there are no recognised Unions representhat there are no recognised Unions representatives of Bombay Cotton Mill workers in the City. The Bombay Textile Labour Union, of which Mr. N. M. Joshi, M. L. A., is the President had barely 400 members. The recognition accorded by the Bombay Millowners' Association to the Bombay Girni Kamgar Union which claimed a membership of over fifty thousand after its registration in May 1928 was withdrawn by the Association on the publication of the by the Association on the publication of the reports of the Court of Enquiry appointed under the Trade Disputes Act to inquire into questions connected with the general strike of the year 1929 and the Riots Inquiry Committee. The Association has been giving anxious consideration to the practical steps which might be taken by mills to bring about better relations between employers and their workmen and for the prevention of accumulation of grievances. In a circular letter dated the 8th January 1930 addressed by the Association to all the mills affiliated to it, they issued instructions that all mills should take immediate steps whereby complaints and grievances of the workers may be attended to by the management con-cerned at once. For this purpose complaint boxes were to be placed in the compounds of all mills in which workers are invited to put in petitions regarding their grievances or suggestions for improvement of conditions of work. The mills have been requested to give sympathetic consideration to any complaints or suggestions made and to redress or give effect to them wherever possible. Further measures calculated to improve the relations between the employers and the employed are under considera-tion. The Association have also devised tion. The Association have also devised measures for joint discussions between managers of mills and the Association on general questions relating to the internal administration of the

The next Committee to be appointed in the Bombay Presidency was a Court of Enquiry appointed under the Trade Disputes Act in connexion with the general strike of cotton mill operatives in Bombay City of 1929. After a prolonged enquiry into the causes of and the conduct of this strike which lasted for nearly

(7) The Trade Unions should combine to | four months, the Pearson Court of Enquiry came to the unanimous conclusion that the whole of the blame for the calling and the continuation of the strike rested with the Bombay Girni Kamgar Union. The Report of the Court was published on the 16th Sept. and its mral effect was so great that the union called off the strike unconditionally on the next day.

> Perhas the most comprehensive enquiry undertaken in India into wages and conditions of labour was the Departmental Enquiry conducted by the Commissioner of Labour (Mr. J. I. and the Gennings, C.B.E., Barrister-at-Law) and the Assistant Commissioner of Labour (Mr. S. R. Assistant Commissioner of Labour (Mr. S. R. Deshpande B.Litt, Oxen) of the Government of Bombay into Wago Cuts and Unemployment in the Cotton Textile Industry in the Bombay Presidency in 1934 The Assistant Commissioner of Labour and the Labour Officer at Ahmodabad together with statistical assistants of the Labour office visited every cotton Mills m the Presidency and procured full information on wages and on the terms of reference which are reproduced below with the Departmental findings --

- 1. The extent of the reduction in wages of work people employed in the cotton Mills in the Bombay Presidency since 1st January 1926.
  - Findings -- Wages in Bombay City were iower by 21 per cent, in April 1934 as compared with July 1926, and in Sholapur reductions amounted to 17 per cent. Wages in Ahmedabad had risen between five to six per cent, during the same period
- 2. Whether the reductions have been uniform in the cotton Mills at each centre of the industry.
  - Findings -The reduction in Sholapur was uniform in all Mills but as the Bombay Millowner's Association permitted its members to take independent action as they pleased the extent of the cuts varied widely as between Mill and Mill.
- 3. Whether the cost of living of the working classes has fallen during this period and to what extent.
  - to what extent.

    Fundings.—Cost of living has fallen in all centres. Taking July 1926 as 100 it fell by 29 points in Bombay City in April 1934. In Ahmedabad the fall in December 1933 as compared with August 1926 was 31 per cent, and in Sholapur there was a fall of 28 per cent. between February 1927 and December 1933.
- 4. What has been the average risc or fall in real wages during this period in the various centres of the industry.
  - Findings.—Bombay, April 1934 eleven per cent higher. Ahmedabad 54 per cent. higher and in Sholapur 15 per cent. higher.

- Where wage reductions have been effected or arc contemplated, the reasons, theretor.
  - Findumy.—The reason most generally given was trade depression. Other reasons varied with the centres. In Bombay it was stated that it was necessary to reduce the cost of production, and labour cost were those most capable of reduction as the fall in the cost of living would enable the workers to maintain the standard of life they had in 1926 even after wages were reduced. As recards Ahmedabad there was no general reduction of wages at the time but such a reduction of wages at the time but such a reduction was contemplated owing to diminished profits and the wage reduction on the rentres. In one centre wages were reduced owing to the probable coming into operation of the 54 hour week.
- 6 The extent to which Rationalisation for example, efficiency schemes have been introduced in the Cotton Mills of the Bombay Presidency and the effects which such schemes have had upon wages and the conditions of work of the operatives.
  - Findings.—That method of rationalisation which takes the from of asking operatives to mind more machines than tormerly has made the greatest progress in Bombay City. In Ahmedabad rationalisation has been particularly directed towards improving the efficiency and types of machines used. The effect of rationalisation on carnings varied from Mill to Mill. In the tew cases where rationalisation had not been accompanied by wage cuts, the workers were getting about 50 per cent more than they did before rationalisation was introduced, where it was accompanied by wage cuts the workers were not getting any nore. The extra rates for minding more machines being neutralised by reductions in wages. The effects of rationalisation on the conditions of work have been beneficial because the workers were either working a shorter day or their work had been rendered easier In Bombay a form of rationalisathe system had not been adopted but double-side working in the frame Department was developing. Where operatives are midding more machines than formerly. The workers have usually been given 35 to 60 per cent more wages in ring spinning and 50 to 75 per cent more on the speed frame. But some benefit from the increased efficiency of the plant had been passed on to some workers in the form of higher earnings on those machines. There has been very little rationalisation in Mills outside Bombay and Ahmedabad.
- What is the extent of unemployment in the cotton Mill industry and what are its causes.

Fundings.—For lack of any agency official or non-official for collecting statistics of unemployment it was very difficult to formulate an answer to this question. 28,000 workers had lost their employment in cotton Mills in Bombay City. (The opening of closed Mills and the employment of workers on might shift had, however, more than absorbed this number by the end of the year). In Ahmedabad 26,551 more operatives were employed than in 1926 and in Sholapur the number employed was more or less stationary.

Few Government reports have received a more universal or widespread welcome in India and the report of the Departmental enquiry formed the subject of leaders and articles in all sections of the Press in India five weeks after its publication. The most important result of the Report was the passing by the Government of Bombay of a Trade Deputes Concination Act appointing the Commissioner of labours as ex-officio Chief Conciliator and the appointment of a senior Member of the Indian Civil Service (Mr. W. Is. Gilligan) as a Labour Officer to look after the interests of Cotton Mill workers in Bombay City, to represent their guevances to their employers and to procure redress of such

A development of the greatest possible importance in the field of industrial Conciliation and arbitration in India occurred early this year when the Commissioners of Labour of the Government of Bombay offered his services as Conciliator to the Western India Match Co. during a dispute which occurred during January 1935 between the Company and its workmen at their Ambernath factory over question connected mainly with reductions in wages Mr. I F. Gennings, C.B.E., Commissioner of Labour, and Mr S. R. Deshpande, Assistant Commissioner of Labour were able to secure an agreement between the two parties on the basis of which work was resumed atter a strike lasting for a month. Subsequent to restarting work there was a turther disagreement between the employers and the workers on the new piece rates and these were referred to the Commissioner of Labour for ai bitration.

day or their work had been rendered caster. In Bombaya form of rationalisa-lappointed by the Government of Bengal during tion is to ask a weaver to mind four the period of intense industrial unrest during looms instead of two. In Ahmedabad the years 1920-21.

(1) As the result of a strike of taxl-drivers and professional drivers of private cars in Calcutta which was caused by objections to certain rules, particularly (a) a new rule requiring medical examination of applicants for professional driver's license, and (b) another rule forbidding the carrying of attendants in taxis, Government appointed a Committee of Enquiry into the existing licensing regulations and the control of taxicabs generally. The strike lasted from the 12th to the 20th January 1921, and ceased as a result of the institution of the inquiry. The Committee made a number of proposals for amendments in the existing regulations. These proposals were ultimately accepted and brought into effect on the 12th October 1921.

- (2) As the result of a strike of drivers and conductors of Calcutta and Howrah tramways, which lasted from the 27th January to the 24th February 1921, Government appointed a Committee of Enquiry after the resumption of work by the strikers on the 8th March 1921. The men resumed work towards the end of February on condition (a) that the Calcutta Tramways Company would investigate their grievances and announce their decision within a week, and (b) that if the men were dissatisfied with the Company's decision, Government would appoint a Committee of Enquiry. There was general agreement between the Company and the men's representatives in regard to the majority of the Committee's recommendations. Some, however, of the Directors of the Company did not accept the terms. Another strike of the tramway employees of a much more protracted character broke out in 1922. It lasted from 20th December 1922 to 27th January 1923. No Committee of Enquiry was appointed, although the representatives of the men raised several points which arose from the previous inquiry. Work was resumed unconditionally.
- (3) During a strike on the light railway of Mesars. Martin and Company in the 24 Parganas and Howrah which lasted from the 15th June to the 2nd July 1921, a special Conciliation Board was constituted by Government by a special resolution at the joint request of the employers and the employers concerned. The result of the Board's efforts was a compromise on most of the points raised by the workers, and as a result of the Board's recommendations it was agreed that joint works committees should be set up on the Howrah-Amta and Howrah-Sheakhala lines. Works Committees were established soon after the Board's report was published, but they failed to function owing to the men's indifference.

  (4) The Bengal Legislative Council passed a resolution on the 4th March 1921 to the effect that Government.
- (4) The Bengal Legislative Council passed a resolution on the 4th March 1921 to the effect that Government should appoint a Committee to enquire into the general causes of the prevailing unrest and to suggest remedial measures. The report of the Committee was published on the 18th June 1921. The main recommendations of the Committee were—

- (a) the establishment of joint works committees in industrial concerns:
- (b) non-intervention of Government in private industrial disputes, which it was considered should be settled by voluntary concillation;
- (c) the constitution by Government of a conciliation panel to deal with disputes in public utility services; and
- (d) the appointment by Government of special conciliation bodies in the case of private industrial disputes, if both parties desired outside intervention.

As the result of the recommendations of this Committee, a conciliation panel was constituted under Government resolution dated the 29th August 1921. The panel contained thirty names, and was composed on a representative basis, leading public bodies being asked to recommend persons to serve on it. The panel was reconstituted every year till 1929, when it was superseded by the Trade Disputes Act. Several applications for Government intervention were received during the period of the panel's existence but in no case did Government consider that intervention was justified.

The Government of Bengal agreed with the Committee's view that there was no reason why voluntary conciliation boards, wisely constituted, should not achieve a large measure of success in labour disputes affecting public utility services, where the parties had come to a deadlock, and a solution of the disputes could only be found in the intervention of outsiders. The panel was intended to deal only with disputes affecting public utility services in Calcutta and its neighbourhood. In the settlement of ordinary labour disputes not directly affecting the public, the Committee held that it was not ordinarily the duty of Government to intervene in such disputes either directly or indirectly, but if both parties express a desire that their differences should be investigated by an impartial authority, the Governor in Council should be prepared to establish a conciliation board to deal with the matter, or to take such other action as might be suitable in the circumstances of the case.

# TRADE DISPUTES LEGISLATION.

The history of the various proposals for legislation providing machinery for the prevention and settlement of industrial disputes in India covers a period of about ten years. The findings of the Industrial Disputes Committee appointed by the Government of Bombay in the year 1921 in pursuance of a Resolution moved in the Bombay Legislative Council for the appointment of a Committee "to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of industrial disputes "has already been dealt with above. Mention has also been made of the action taken by the Government of Bombay under circumstances which led to its abandonment owing to the Government of India circularising a draft Bill as an All-India measure. The Bill circulated by the Government of India in August 1924 was very wide and comprehensive in scope and extent.

Nothing further was heard about this Bill until the end of 1925 when His Excellency the Viceroy in a speech at the Annual Meeting of the Associated Chambers of Commerce of India and Ceylon, at Calcutta, said: "The question of providing means of conclitation of trade disputes has been thoroughly explored but it would be premature to leguslate on this question until the Trade Union Bill has become law." The Trade Unions Act was passed in the Legislative Assembly in March 1926 and was brought into operation with effect from the 1st June 1927.

In August 1928 the Government of India published their second Bill making provision for the investigation and settlement of trade disputes and for certain other purposes. This Bill was introduced in the Legislative Assembly with a motion for circulation on the 21st.

September 1928. The Bill differed in several important respects in comparison with the Government of India's original Bill of 1924. The main part of the Bill fails into three parts. Clauses 3 to 14 of the 1928 Bill related to the establishment of tribunals for the investigation and settlement of trade disputes. This part of the Bill was based generally on the British Industrial Courts Act of 1919 and its detailed provisions were adopted for the most part from clauses in that Act. The main difference was that, whereas the British Act sets up a Standing Industrial Court, the Conciliation Boards which the Bill proposed to establish were intended to be appointed ad hoc like the Courts of Inquiry, in order to deal with particular disputes. The object of Courts of Inquiry which would ordinarily be composed of persons having no direct interest in the disputes would be to investigate and report on such questions connected with the dispute as might be referred to them. The objects of Boards of Conciliation which would ordinarily include representatives of the parties to a dispute would be to secure a settlement of to a dispute would be to secure a settlement of the dispute. Provisions were made so as to enable both Courts of Inquiry and Boards of Condilation to enforce the attendance of witnesses and the production of documents. Neither party would be under any obligation to accept the finding of the Court or the advice of the Board; and in cases where the dispute is not brought to an end during the deliberations of the tribunal that had been appointed, reliance was to be placed on the force of public opinion which would be enabled by the publication of the report of the tribunal to arrive at just conclusions on the merits of the dispute.

The second part of the Bill consisted of clause 15 which related to public utility services. In accordance with the definition of "Public Utility Services" in clause 2 of the Bill, Clause 15 would be applicable to such railway services as would be notified by the Governor-General in Council. The clause made it a penal offence for workers employed on monthly wages in public utility services to strike without previous notice and also provided heavy penalties for persons abetting such an offence. The clause was based on the principle that persons whose work was vital to the welfare of the community generally should not be entitled to enter into a strike before sufficient time had been given to examine the merits of their grlevances and to explore the possibilities of arriving at a possible settlement. Provisions of a somewhat similar type already exist in the Indian Post Offices Act, in a number of Municipal Acts in India, and the principle is one which is widely accepted in other countries.

Clauses 16 to 20 of the Bill contained certain lockouts. These clauses followed closely the provisions of sections 1, 2 and 7 of the British Trade Disputes and Trade Unions Act, 1927. They were to be applicable only in the case of the strikes and lockouts which satisfied both of two conditions: in the first place, the strike or lockout must have other objects than the mere furtherance of a trade dispute within the industry to which the strikers or employers belonged; and, in the second place, the strike or lockout must be designed to coerce Govern-

ment either directly or by inflicting hardship on the community. If these conditions were satisfied, the strike or lockout would become illegal. Persons furthering the strike or lockout were liable to punishment and would be deprived of the protection granted to them by the Indian Trade Unions Act, while persons refusing to take part in it would be protected from Trade Union disabilities to which they might otherwise be subjected.

The motion for circulation was adopted in the Legislative Assembly and the Bill was circulated to all Local Governments for opinion. Some Provincial Governments recommended that questions connected with picketing and intimidation of the type which were entirely responsible for the undue prolongation of the general strikes in the cotton mills of Bombay ('ity of the years 1928 and 1929 and the rioting in Bombay in the year 1929, should also be covered. The Bill was referred to a Select Committee of the Legislative Assembly in February 1929.

The Select Committee decided to limit the duration of the Act to five years. In connection with the definition of the term "Public Utility Services" they were of the opinion that the wide power enabling the Government to declare any industry, business or undertaking to be a public utility service was undesirable as well as unnecessary and the provision made for this in the draft Bill was omitted. Various proposals designed to lay upon the Government a definite obligation to convene a Court of Inquiry or a Board of Conciliation in cases where one of the parties so required were considered. But the Committee thought that unless both parties were agreed in desiring a reference it would be useless to fetter the discretion of the Government as to the time at which the matter was reported for action under clause 3. At the same time they held that no option should be left to the Government to refuse to appoint a Court or Board where the Government was assured that both parties were agreed as to the necessity as well as to the form which it should take. They therefore considered it necessary to provide that in every case a Court of Inquiry, where it consisted of one or more persons, should not include persons having an interest in the dispute or in any industry affected by it, and in this connection the Committee proposed a further definition of the term "An independent person." The clause relating to the publication of the findings of Courts and Boards was maintained on the lines of the English Act so as to make it quite clear that every report of a Court or Board. whether final or interim, must be published, and that only the publication of such information or evidence as the appointing authority thought fit should be left to its discretion. It was considered inadvisable to forbid the representation of parties before Courts and Boards by legal practitioners subject only to exceptions and they redrafted the clause in such a manner as to permit that such representation would ordinarily be permissible subject, however, to such conditions and restrictions as might be provided by the rules.

The Select Committee accepted the principle underlying the clause in connection with strikes in public utility services but they held that the clause as originally drafted was open to certain criticisms. For example, it was pointed out that

many persons are actually employed upon a daily wage which is in practice paid monthly; also that the clause as provided would appear to penalise abstention from work on the part of a particular individual; and further that the clause was one-sided and inflicted no penalty upon an employer who locks out his workmen. latter point was considered as one which should certainly be met as by the nature of his employ-ment a casual or day-to-day labourer must be entitled to cease work at any moment and be similarly liable to dismissal and it was agreed that he should therefore be excluded altogether from the operation of this clause. The Committee adopted a suggestion made by the Government of Bombay which made it clear that the cessation of work must be in the nature of a strike as defined in the Bill and it was provided that in order to render it a penal offence the strike must be in breach of a definite contract between the employer and the workmen. committee added a collateral provision penalis-ing an employer for locking out his workmen in breach of any contract. The Committee adopted the clause in connection with illegal strikes but with some amendments which, in their opinion, would restrict its scope without materially impairing its effectiveness. In sub-clause 2 of this section they made it clear that, for the application of money to be illegal it must not merely tend to further or support the strike, This was but have the direct effect of so doing. intended to exclude a case in which money is spent upon the relief of the dependants of strikers. A further sub-clause, borrowed from a similar provision from the English Act of 1927 explaining the circumstances in which a group of workmen should be deemed to be within the same trade or industry was added. The penalties provided for the instigation of an illegal strike were modified. With regard to clause 20 of the draft Bill, the Committee held that there was no sufficient justification for giving an option to the Government to apply for injunctions restraining the expense of the funds of a Trade Jnion in connection with an illegal strike. It was considered that under clause 16 such expenditure had been declared illegal and the persons properly interested in seeing that the funds were not mis-spent are the members of the Trade Union concerned. Committee were of the opinion that the Bill had not been so altered as to require republication and they recommended that it should be passed as duly amended by them.

The Select Committee as such did not deal with the question of making provision for picketing and intimidation in their report but in a minute of dissent Sir Victor Sassoon, Barts, stated that the alteration of the law relating to picketing was one for which, in his opinion, the time was ripe. Picketing of any kind should be rendered illegal while a Court or Board is sitting and the law on picketing at any time should be altered to render it illegal at or near a workmen's house as under the English Law. There appeared to be some doubt as to whether legislation of this kind should take place in this Bill or by an Amending Bill to section 503 of the Indian Penal Code. It had been stated that if an amendment of this kind were passed in the Select Committee it would delay the Bill. As he did not desire to delay the acceptance of the

provisions of this Bill he did not press the point which was raised by other members of the Select Committee. Sir Victor Sassoon, however, thought that suitable action should be taken by Government either when the Bill came up before the House or by bringing out an amending Bill to the Indian Penal Code to deal with this most important and necessary point. The action taken by the Government of Bombayin connection with the passing of an Intimidation Act has been dealt with in the chapter on Industrial Disputes.

The Bill as amended by the Select Committee was passed by the Legislative Assembly on the 8th April 1929 without any change and received the assent of the Governor-General on the 12th April 1929. The Act was due to expire early in 1934 but by virtue of an amending Act it has been placed permanently on the Statute Book.

During the period of nearly six years for which the Act has been in operation, it his only been made use of on four occasions: once by the Government of Bombay when they appointed a Court of Enquiry in the year 1929 to enquire into the general strike in Cotton Mills in Bombay City in that year, twice by the Government of India who appointed a Board of Conciliation in 1930 in connexion with a dispute in the Bombay, Baroda and Central India Railway which arose over the question of the transfer of a number of workmen from the Railways' workshops in Bombay to the new workshops which they were starting in Dohad, and another Court of Enquiry in 1931 to enquire into and report on the grievances of the large numbers of workers who were retrenched on all Indian Railways during that year, and once by the Government of Burma.

Royal Commission's Recommendations — The Royal Commission on Indian labour were of opinion that some statutory machinery will be permanently required to deal with trade disputes and that it will be necessary to consider the form which such machinery should take before the Trade Disputes' Act expired in 1934. They recommended that the possibility of establishing permanent courts in place of ad hoe tribunals under the Act should be examined and also that the question of providing means for the impartial examination of disputes in public utility services should be considered. The Commission also recommended that Section 13 of the Trade Disputes' Act should be amended so as to provide that no prosecution or suit shall be maintainable on account of any breach of the section or any damage caused thereby, except with the previous sanction of the Government which appointed the tribunal. Act XIX of 1932, giving effect to this recommendation was passed by the Indian Legislature in September 1932.

In May 1933, the Government of India issued a circular letter to all Provincial Governments inviting opinions, after consultation with the interests concerned as to (1) whether the Indian Trade Disputes Act, 1929, should be converted into a permanent measure, and (2) what amendments, if any, should be made in the Act. The Government of India were provisionally disposed to accept the Royal Commission's recommendation to include "Inland Water Services" within

the definition of a "Public Utility Service" ciliators and Assistant Conciliators. If the but not "Tramway Services" because the Chief Conciliator or any Conciliator appointed later generally have no monopoly in transport under the Act (a) in any area for which a Labour in the areas in which they run. Opinions were also specifically invited on the following five questions: (1) whether any statutory provision should be made in the Act for the provision should be made in the Act for the appointment of Conciliation Officers; (2) whether a permanent Industrial Court on the lines of the British Industrial Court should be framed in each Province; (3) whether strikes or lockouts should be prohibited during the pendency of a Court of Enquiry or a Board of Conciliation; (4) whether awards of Boards of Conciliations should be made binding on both employers and the employed; and (5) whether picketing either by itself or when it is resorted to while a strike has been referred to a Court or Board should be made illegal. The Government of India were also disposed to accept the recommendation made by the Commission to omit the words "between an employer and any of his workmen" in Section 3 of the Act because as this Section stands at present it requires notices of the appointment of a tribunal appointed under the Act to be sent to every individual employer affected by a dispute. The Government of India requested all local governments to send them their replies by 1st November 1933. At the moment of going to press the Legislative Assembly passed a bill introduced by the Government of India to conve.tthe Trade Disputes Act into a permanent measure. As regards the various amendments in the provisions of the Act it is understood that the Government of India propose to introduce another bill in the Assembly sometime later. Indian labour in general has been very badly let down by the communist agitators who dominated labour platforms all over the country in 1928 and 1929 and to-day there are few labour leaders in India who can command respect and adherence from both the employers and the employed. Great labour leaders like Mr. N. M. Joshi, W.L.A., have, during the last two or three years, been engaged in fighting the cause of labour either before the Round Table Conferences in connexion with India's political future or in the Legislative Assembly in connexion with Bills and proposals for new labour legislation.

With regard to the action which should be taken by Provincial Governments the Commission recommended that every Provincial Government should have an officer or officers whose duty it would be to undertake the work of conciliation and to bring the parties privately to agreement. The Commissioner of Labour in Madras, the Director of Industries in the Punjab, the Director of Statistics and Labour Com-missioner in Burma and Deputy Commissioners and the Director of Industries in the Central Provinces have already been entrusted with powers as Conciliation Officers.

The most notable achievement in the field of industrial conciliation in India was the passing of the Bombay Trade Disputes Conciliation Act, 1934. This Act is, in the first instance, to apply to the textile industry. It provides for the appointment of the Commissioner of Labour as ex-officio Chief Conciliator and also for the appointment of a Labour Officer, special Con-

Officer is appointed, on receipt of an application or report from such Labour Officer, or (b) elsewhere, on receipt of an application from either or both parties to a dispute or upon his own knowledge or information is satisfied that a trade dispute exists or is apprehended, he may cause notice to be given to the parties to the dispute to appear before him and he is empowered to proceed to bring the two parties together with a view to conciliation. The Labour Officer duties are "to watch the interests of workmen with a view to promote harmonious relations between employer and workmen and to take step to represents the grievancies of workmen to employers for the purpose of ob-taming their redress. Both the Labour Officer and the Conciliator have been given powers of entering premises and calling for documents relevant to the subject-matter of the enquiry. The Act came into immediate effect and Mr. W. B. Lilligon, I c.s., was appointed Labour Officer with effect from the 1st September 1934. In accordance with an undertaking given to dovernment by the Millwoners' Association, Bombay, for the appointment of the Association's Labour Officer, the Association appointed Mr. C. A. Dalal B.S. (London), as then Labour Officer to maintain a uniform policy for discussion and to represent Mill Managements in proceedings with the Government Labour Officer and the Chief Conciliator. During the short period for which the Act has been in force remarkable results have been achieved and there is today an almost complete absence of industrial strife in the cotton mill industry in Bombay City. will be evidenceed by the figures in the tollowing table which show the number of disputes, number of workers involved in these disputes and the number of working days lost in textile Mills in Bombay City for each half year from the beginning of 1930 to the end of 1934.

# INDIA AND INTERNATIONAL LABOUR CONVENTIONS.

The Preamble to Part XIII of the Treaty of Versailles refers to the fact that "the failure of any nation to adopt humane conditions is an obstacle in the way of other nations which desire to improve the conditions in their own countries." In order to establish universal peace based on social justice, the Peace Treaty peace based on social justice, the Peace Treaty not only laid down general principles in regard to questions affecting labour which were recognised by the High Contracting Parties to be of "special and urgent importance," but also brought into being the International Labour Organisation which was entrusted with the task of securing, as far as practicable, the observance of these principles. The International Labour Conference has been discussive various conserted with International Labour Conference has been discussing various questions connected with industrial, agricultural and maritime labour since 1919 and has recorded its findings in conventions and recommendations. The Conventions and Recommendations adopted by the Conference are not automatically binding on the State Members, but they have to be submitted to the Legislature of each country, and this secures the regular examination both by the Executive Governments and the Legislatures of schemes which international opinion considers necessary and desirable for the amelioration of labour conditions During the eighteen Conferences that have been held, over forty Conventions have been adopted. Out of these the following thirteen have been ratified by India —

- Hours of work (1919).
- Unemployment (1919). Night work of Women (1919). 3.
- Night work of young persons in Industry 4. (1919).
  - Rights of Association (Agriculture) (1921). Weekly Rest in Industry (1921).
- Minimum age of stokers and trimmers (1921).
- 8
- 11. Inspection of Emigrants on board ship (1926).
  - 12. Seamen's Articles of Agreement (1926).
- 13. Weight of Packages transported by vessels (1929).

In addition to the Conventions dealt with above, the International Labour Conferences have also adopted numerous Recommendations.

The Seventeenth Session of the International Labour Conference held at Geneva from the 8th to 30th June 1933 adopted conventions in respect of (a) employment agencies, (b) widows and orphans' insurance and (c) invalidity and old age insurances. It also adopted Recommendations in connection with the first two subjects.

# GOVERNMENT ADMINISTRATION.

During pre-Reform days Labour was not a question to which the Central or Provincial Governments in India gave the same attention as they did to such subjects as education, health or justice. After the amendment of the Indian Factories Act of 1891 in 1911, the appointment of the Indian Industrial Commission in May, 1916, may be considered to be the first milestone in the progressive interest taken by Government in questions connected with labour. The active participation of India in the Great War led to the 'creation of an unprecedented opportunity' and 'the emergence of an unprecedented need' for a definite industrial policy for India as a whole. The examination of various industrial questions by the Industrial Commission included, to a certain extent, the examination of questions connected with labour as well. Previous to this date no provincial or All-India inquiries of a general character were held into conditions of labour with the exception of some quinquennial censuses into agricultural wages. No information was available in 1919 as to the rates of wages which were paid in industry, and, for that matter, very little information in this direction is available even to-day. Indian labour secured its first opportunity with her participation in the signing of the treaty of peace and her becoming a live member of the international comity of

Washington in the year 1919 made it necessary for the Government of India and the Governments of the more industrialised provinces not only to consider the question of the representa-tion of labour in the Central and Provincial Legislatures but also to allocate to special departments or offices the administration of labour questions.

Under the Devolution Rules (Schedule I, Part 2, Rule 26) industrial matters included under the heads factories and welfare of labour fall within the scope of the provincial legislatures. Under the same rules "regulation of mines" and "inter-provincial migration" are central subjects. A Labour Bureau was established by the Government of India in the year 1920 but it was abolished in March 1923 on the recommendation of the Indian Retrenchment Committee. The administration of labour matters since then has been in the hands of the Department of Industries and Labour with a Member of the Viceroy's Council holding the portfolio. Amongst Local Governments, the Bengal and the Madras Presidencies were the first in the field for the creation of special Labour Officers, but it was the Government of Bombay who took the lead in the field for the creation of a proper Labour Office for the collection and a live member of the international comity of a proper Labour Office for the collection and nations. The participation by India, in the first compilation of all kinds of statistics in conInternational Labour Conference held at nexion with prices, cost of living, wages, etc.

# Bengal.

The Government of Bengal appointed a Labour Intelligence Officer in the year 1920. Labour laws were to be administered in the Commerco Department, but the Revenue Department continued the administration of the Assam Labour Immigration Act. The Labour Intelligence Officer was to keep a record of industrial disputes in the Presidency and also the number of labour organisations. From time to time, as circumstances permitted, he was to conduct special inquiries. He was, however, not provided with an adequate staff for the purpose. The Labour Intelligence Officer is also the Deputy Secretary to the Government of Bengal in the Commerce Department and since the bringing into effect of the Indian TradeUnions Act, 1926, he has also been appointed Registrar of Trade Unions. The Royal Commission on Indian Labour have recommended that Bengal should have a properly staffed Labour office on the same lines and with at least the same staff as the Labour office of the Government of Bombay.

#### Madras.

The Government of Madras appointed a Labour Commissioner in the same year, viz., 1920, to watch and study at all times the conditions of labour particularly industrial labour throughout the Presidency and to keep Govern-ment informed by periodical reports of its move-ments and tendencies and of the existence of any disputes between employers and employed. The settlement of labour disputes and prevention of strikes are features of his work but his interference in such disputes is limited to tendering his offices to settle them. In the case of disputes affecting the internal administration of a railway he may interfere only if both sides agree to his intervention but he must obtain the previous sanction of Government in each case. He is also the Protector of Depressed Classes in which work most of his time is occupied. On a par with the Labour Intelligence Officer, Bengal, the Labour Commissioner in Madras has also no special statistical office to deal with labour statistica and no reports have been published of any special inquiries into questions connected with industrial labour in the Presidency. Since the creation of the Office the conduct of periodic censuses into agricultural wages is, however, placed in his hands.

#### The Bombay Labour Office.

The real pioneer work in the field of labour information and statistics in India during the last fourteen years has been done by the Labour Office of the Government of Bombay which was established in April 1921. In the Government resolution announcing the establishment of this office the following were declared to be its functions:—

- "(1) Labour Statistics and Intelligence.— These relate to the conditions under which labour works and include information relating to the cost of living, wages, hours of labour, family budgets, strikes and lockouts, and similar matters;
- "(2) Industrial Disputes.—As experience and knowledge are gained and the activities of the Labour Office develop it will promote the settlement of industrial disputes when these arise; and

"(3) Legislation and other matters relating to labour.—The Labour Office will advise Government from time to time as regards necessary new legislation or the amendment of existing laws."

When the Labour Office was first started it was placed in charge of Director of Labour, The post of the Director of Labour was, however, abolished in 1926 and the labour office was placed under the charge of the Director of Information whose designation was changed to Director of Information and Labour Intelligence. With a view to implementing the reconfinendation of the Royal Commission on Indian Labour in the matter, the Government of Bombay in May 1933 again changed the designation of the Director of Information and Labour Intelligence to "Commissioner of Labour and Director of Information." With this change in designation the administrative control of the Factory and Boiler Departments was transferred from the Collector of Bombay to the Commissioner of Labour and the Commisto the Commissioner of Labour and the Commissioner of Labour was also appointed ex-officio Commissioner for Workmen's Compensation and Registral of Trade Unions. Under the Bombay Trade Disputes Act, 1934, the Commissioner of Labour has also been appointed ex-officio Chief Conciliator In addition to the Commissioner there are four granted officers attached to the Labour Office. Three of these are Assistant Commissioners of Labour at headquarters in Bombay and the fourth who is called the Labour Officer at Alimedabad 18 stationed at that centre. There are also three is stationed at that centre. There are also three tull time Lady Investigators but these are not gazetted appointments. The Assistant Commissioners, the labour Officer and all the Investigators receive conveyance allowances. The office staff contains two Statistical Assistants, three senior clerks, ten junior clerks, two stenographers, one typist one cashier, one despatcher, one daftari and five peons in Bombay and one peon in Ahmedabad. The activities of the office comprise (1) prices and cost of living, the omce comprise (1) prices and cost of living, (2) wages and hours of labour, (3) rents, (4) economic and social conditions of various communities, (5) unemployment, (6) industrial disputes, (7) tiade unions, (8) other industrial and labour intelligence, (9) international labour intelligence, (10) labour legislation, (11) the Labour Gazette, (12) library, and (13) office overconsections. organisation.

The Labour Gazette has been published monthly from September 1921 It is intended to supply complete and up-to-date information on Indian labour conditions and especially the conditions existing in the Bombay Presidency, and to supply to local readers the greatest possible amount of information regarding labour conditions in the outside world. The Labour Gazette circulates to many different countries and is perhaps the only publication of its kind in India from which foreigners interested in labour and economic conditions in India can obtain accurate and up-to-date information. It has also intherto been practically the only medium through which the work and publications of the International Labour Office have been made regularly available to people in India. A substantial grant is allowed by the Local Government to the Labour Office for the purchase of books and the Labour

Office has accumulated a very useful and fully catalogued library on labour, industrial and economic matters. The Labour Office library is open to research workers in Bombay. In addition to books, the library contains bound copies of all the more important periodical received from Labour Ministries, International organisations and research organisations in various parts of the world.

The Labour Office has conducted several special inquiries, the results of which have either been published in the form of special reports or as special articles in the Labour Gazette. Among the inquiries the results of which have been published in the form of reports are three inquiries into wages and hours of labour in the Cotton Mill Industry in the Bombay Presidency for the years 1921, 1923 and 1926; four reports of inquiries into family budgets three of which related to working class family budgets in Bombay, Ahmedabad and Sholapur and the fourth to middle class family budgets in Bombay City. The remaining reports dealt with inquiries into agricultural wages in the Bombay Presidency, an inquiry into deductions from wages or payments in respect of fines and an inquiry into middle class unemployment in the Bombay Presidency. Other special inquiries related to wages of peons and municipal workers, welfare work, rentals in Bombay and Ahmedabad, maternity cases among women operatives, methods of wage payments, creches, clerical wages in Bombay City, incidence of sickness among cotton mill operatives, infant mortality, etc. In the Labour Gazette statistics are regularly multished for working cless tics are regularly published for working class cost of living index numbers for Bombay, Ahmedabad and Sholapur, wholesale prices index numbers for Bombay and Karachi, retail food prices for five important centres in the Bombay Presidency, for industrial disputes in the Bombay Presidency, for industrial disputes in the Bombay Presidency and for Workmen's Compensation, prosecutions under the Indian Factories Act, and the employment situation. A new working cla's index number has been compiled for Ahmedabad and statistics with regard to this have been published in the issues of the Labour Gazette since January 1930. working class cost of living index number for Sholapur has also been published. Quarterly information is also collected with regard to all known Trade Unions in the Bombay Presidency and full information is published in the Labour Gazette every three months. The present staff of the Labour Office is as follows .

Commissioner of Labour and Director of Information, Commissioner of Workmen's Compensation and Registrar of Trade Unions.—Mr. J. F. Gennings, C.B.E., Bar-at-Law, J.P.

Assistant Commissioners of Labour.—Mr. S. R. Deshpande, B. Litt. (Oxon), Mr. N. A. Mehrban B.A., F.S.S. and Mr. S. V. Joshi, B.A., (Cantab.) Mr. Joshi is also assistant to the Registiar of Trade Unions, Bombay Presidency.

Labour Officer at Ahmedabad:—Mr. A. S. Iyengar, B.A., LL.B.

Lady Investigators.—Mrs. K. Wagh, Miss G. Pimpalkhare and Miss S. Dabhoikar. (These are non-gazetted appointments.)

The Commissioner of Labour and Director of Information has six offices under his charge: (1) The Labour Office; (2) the Information Office; (3) the Office of the Commissioner for Workmen's Compensation, (4) the office of the Registrar of Trade Unions, (5) The office of the Chief Inspector of Factories; and (6) the office of the Chief Inspector of Boilers. In the case of the Office of the Registrar of Trade Unions one Asst. Commissioner of Labour has been appointed as Assistant to the Registrar of Trade Unions and the office work is done by a Statistical Assistant and a junior clerk from the staff of the Labour Office. The Information Office is under the administration of the Home Department. The Labour Office was under the administration of the Home Department till the year 1925, but it was transferred to the General Department and is now under the control of the Political and Reforms Department.

#### Central Provinces.

The Department of Commerce and Industry is the administrative authority which deals with all labour questions. The Revenue Department deals with mines. The Department of Industries under the Director of Industries is in immediate charge of all matters relating to labour. He is also Registrar of Co-operative Credit Societies and Registrar of Trade Unions. The Factory Office is under the general supervision of the Director of Industries. There is no special Labour Office or Labour Officer in the Central Provinces but the factory staff is utilised for collecting such information on labour questions as may be required from time to time. A Board of Industries consisting of representatives of the employers and the employed has been in existence since the year 1914 and all matters affecting the interests of labour are considered by this Board. But the Board acts purely in an advisory capacity.

# Other Provinces.

In Burma a Labour Statistics Bureau with a Special Officer in charge was set up in 1926. This Bureau has conducted an extensive investigation into the standard and cost of living of the working classes in Rangoon, the Report of which was published in 1928. In the Punjab the Director of Industries is the administrative officer for all acts concerned with labour. the United Provinces almost all departments of the Local Government deal with labour questions. Labour as such is with the Home Member, electricity is with the Finance Member, the factory staff is under the immediate control of the Director of Industries who is under the Minister of Education and Industries and Boiler Inspection is under the Public Works Department. The Registrar of Co-operative Societies of the United Provinces has been appointed Exofficio Registrar of Trade Unions in the Province. In Assam the main question connected with labour is that concerning the recruitment of labour for the tea plantations from other provinces. As inter-provincial migration is a Central subject, the Local Government are not very actively interested in the special consideration of other labour questions.

Representation on Legislatures.—The Government of India nominates one member for labour interests in the Legislative Assembly. Since the last reforms were brought into opera-

tion Mr. N. M. Joshi, of the Servants of India Society, has been continuously nominated as labour member in the Legislative Assembly. In the Bombay Presidency the Local Government had provided one seat for labour, and Mr. S. K. Bole was nominated as the labour member in the first two Councils after the reforms. In 1927 the Local Government increased the number of seats for labour to three but the principle of nomination was maintained. The three persons representing labour interests in the Bombay Legislative Council at present are Messrs. S. K. Bole, Syed Munawar and R. R. Bakhale. In the Central Provinces, Mr. R. W. Fulay, a Nagpur pleader, has been nominated as a representative of urban factory labour. In Bengal there have been two nominated members to represent labour interests since the introduction of the reforms. The Assam Government reserves one seat for the nomination of a member to represent labour but it has been found impracticable to find any one who could adequately represent this constituency and therefore the seat is vacant in the present Assam Legislative Council.

Relation between Central and Local Governments—It has already been stated above that under the Devolution Rules, factories, settlement of labour disputes and welfare of iabour are reserved subjects. These subjects arc, however, subject to central legislation. The provincial legislatures are not debarred from initiating legislation on these matters but they can only do so with the previous sanction of the Governor-General in Council. The actual administration of the Acts passed by the central legislature under the above heads falls on the Local Governments who have to bear the entire cost of administration, as it is not permissible under the constitution to incur any expenditure from central revenues on the administration of provincial subjects. This constitutional position is perhaps, to some extent, responsible for the opposition shown by some of the Local Governments to labour measures on which their opinions have been invited by the Government of India during recent years. The Governor-General in Council exercises control over the administration of the Acts passed by the legislature in two ways: in the first place he is vested by Statute with the general power of superintendence, direction and control, and, secondly, these Acts in most cases either reserve certain powers to him to make the powers conferred on Local Governments subject to his control. The general principle observed by the Government of India has been to grant to the provinces as free a hand as possible in the administration of the various All-India Acts.

Effect of differences in Law in Indian States and British India.—Few Indian States have any labour legislation but most of them are of little industrial importance. The only States which have more than 8,000 persons employed in factories and mines are Hyderabad, Mysore, Indore, Baroda, Jammu and Kashmir, Gwailor and Travancore. Most of these States have a Factories Act which, however, is much below the standard of the corresponding Act in British India. In recent years there has been a tendency on the part of certain capitalists to endeavour to evade the provisions of the Factory Law in British India by establishing mills or factories in the territories of Indian States.

Recommendations of the Royal Commis-on.—The most important recommendation made by the Royal Commission on Indian Labour in connexion with Government administration of matters connected with labour is for the setting up of an Industrial Council which would enable representatives of employees of labour and of Governments to meet regularly in conference to discuss labour measures and labour policy. It is suggested that the Council should meet annually and its President should be elected at each annual session. The Secretary of the Council should be a permanent official responsible to it for current business. The functions of the Council would be (1) the examination of proposals for labour legislation referred to it and also to initiate such proposals; (2) to promote a spirit of co-operation and understanding among those concerned with labour policy, and to provide an opportunity for an interchange of information regarding experiments in labour matters; (3) to advise the Central and Provincial floverments on the framing of rules and regulations; and (4) to advise regarding the collection of labour statistics and the co-ordination and development of economic research. If Labour Legislation is made a Central subject in the new constitution of India, the Royal Commission recommend that the authority finally responsible for such legislation must be the Central Legislature. If Labour iegislation is to be decentialised, some co-ordinating body will be necessary. The decisions of the Council could not be given mandatory power, but in certain circumstances it might be made obligatory for Provincial Governments within a specified time to submit proposals for legislation to their respective legislatures for a decision as to their adoption or rejection.

The Commission recommended that Labour Commissioners should be appointed both for the Central and in aii the Locai Governments except Assam. Labour Commissioners should be selected officers who should hold the appointment for a comparatively long period. They should be responsible for the publication of labour statistics, should have the right to enter all industrial establishments and should be generally accessible both to employers and labour and should act as conciliation officers. Where there is danger of establishments being transferred to Indian States in order to escape regulation, an effort should be made to obtain the co-operation of the adjoining states. The Commission also recommended that the possibility of making labour legislation both a federal and a provincial subject should receive adequate consideration; and that if federal legislation is not practicable, efforts should be directed to securing that, as early as possible, the whole of India participates in making progress in labour matters. For States in which there is appreciable industrial development, the Industrial Council should offer a suitable channel for co-operation. On the 7th March 1935 Mr. P. N. Sapru moved a resolution in the Council of State urging the establishment of the Industrial Council on the lines suggested by the Whitiy Commission. Mr. D. E. Matchell speaking on behalf of Government expressed sympathy with the resolution. He did not deny that the creation of such an Industrial Council would be of very great value but there was no great hurry for it.

He quoted the Commission and said they were each registered trade union. not for its immediate establishment. The situation had considerably altered since the recommendation had been made in 1931 and there was a possibility under the new constitu-tion that Labour would be decentralised. In that case there was the danger that legislature made under autonomous provinces would come into conflict with the Centre. In view of this he thought that the creation of such a Council at this state was not desuable. The Resolution on being put to the vote was negatived by 22 votes against seven for.

With regard to the question of representation of labour on the legislatures the Royal Commission recommended that if special constituencies are to remain a feature of the Indian constitution labour should be given adequate representation in the Central and Provincial representation in the Contral and Province legislatures. The mothod which is most likely to be effective in securing the best representatives of labour is that of election by registered trade unions. A special tribunal should be set up in each province to determine before election the weight which should be given to

The question was examined by the Indian Franchise Committee and so far as the Provincial Councils are concerned the communal award of His Majesty's Government has given effect to the Labour Commission's recommendation the Labour The Franchise Committee recommended a combination of trade union constituencies and special constituencies and this has been, more or less, adopted in the Government of India Bill under discussion in the House of Commons as we go to Press.

In the Government of India Bill the following subject may be legislated for concurrently both by the federal Legislature and the Provinces Legislatures .-

- Factories; regulation of the working of Mines, but not including mineral development;
- Welfare of Labour; provident funds; employers' liability and workmen's compensation :
- (3) Trade Unions, industrial and labour disputes.

## Domestic Servants.

is a subject to which attention is frequently directed in the Press by complaints about the alleged deterioration of domestic servants and the hardships to which employers are subjected by the boycotting action of discharged servants. The remedy most commonly propounded for misbehaviour on the part of servants is regis-tration with a view to checking the use of false testimonials or "chits," and to enabling masters to obtain certain information as to the character of the parsons they employ. This mode of procedure is of German origin, for the old Prussian Servants' Ordinances (Gesindeordnung) were supplemented in 1854 by a law, applying only to agricultural labourers and domestic servants, which punishes breach of contract, and since then various State laws dealing with domestic servants have been passed in Germany. The conditions are not, however, analogous for the servant keeping class in India is proportionately larger than in Europe, as also is the number of servants kept by each individual

The first attempt in the East to deal with the problem by legislation was made in Ceylon. The act dealing with the registration of domes-The act dealing with the registration of domes-tic servants in that Colony is comprised in Ordinance No. 28 of 1871. It extends to all classes of domestic servants, hired by the month or receiving monthly wages, and the word 'servant' means and includes head and underservants, female servants, cooks, coachmen, horsekeepers and house and garden coolies. The Act came into operation in 1871 and em-The Act came into operation in 1871 and employment the Governor to appoint for the whole of the Island or for any town or district, to which the Ordinance is made applicable, a containing the full particulars of the record registrar of domestic servants, who is to be made in the general registry. No person can under the general supervision and control of the engage a servant who fails to produce his pocket Inspector-General of Police. A registry is kept register or whose pocket register does not record

The relationship of master to servant in India by the registrar of all domestic servants employed within his town or district, and he has to enter therein the names of all the servants. the capacities in which they are employed at the time of such registration, the dates of their several engagements and such memorandum of their previous services or antecedents as they may desire to have recorded in the register. But the registrar must, previous to his entering all these details, satisfy himself as to the credibility of the statements made to him. Any person, who may not have been a domestic servant before, but who is desirous of entering domestic service, has to submit an application to the registrar, and if the registrar is satisfied that there are reasonable grounds to believe that the applicant is a fit and proper person to enter domestic service he shall enter his name in the register, recording what he has been able to learn respecting the person's antecedents together with the names of any persons who are willing to certify as to his respectability. If the applicant is unable to produce satisfactory or sufficient evidence as to his fitness for domestic ervice the registrar may grant him "provision-al" registration, to be thereafter converted into ar registration, to be thereafter converted into "confirmed" registration according to the result of his subsequent service. If the registraris satisfied that the applicant is not a fit and proper person he should withhold registration altogether, but in such a case he must report his refusal to register to the Inspector-General of Police.

the termination of his last previous service, if any. On engaging a servant the master has to enter forthwith in the pocket register the date and capacity in which such servant is engaged and cause the servant to attend personally at the registrar's office to have such entry inserted in the general registry. Similarly, in case the master discharges a servant he must insert in the pocket register the date and cause of his discharge and the character of the servant. Provided that if for any reason he be unwilling to give the servant a character or to state the cause of his discharge he may decline to do so. But in such a case he must furnish to the registrar in writing his reasons for so refusing. If the servant on dismissal fails to produce his pocket register the master must notify that fact to the registerar. Whenever any fresh entry is made in the pocket register the servant is bound to attend the registrar's office to have such an entry recorded in the general registry. Every servant whose name is registered shall, if he subsequently enters service in any place not under the operation of the Ordinance, attend personally at the nearest police station on his entering or leaving such service and produce his pocket register to the principal officer of police at such station in order to enable the police officer to record the commencement or termination of the service. The police officer has then to communicate it to the registrar of the town or district in which such servant was restricted to the class of householders who are expected to desire the benefit of the provisions.

Various penalties of fine as well as of imprisonment are imposed for violation of any of the acts required to be done or duties imposed by the Act on the various persons mentioned below. As respects masters if they fail to fulfil any of the duties imposed on them by the Act they expose themselves to a liability of their being fined to the extent of Rs. 20. Similarly a servant, who fails to fulfil any of the duties imposed on him by the Act is liable to pay a fine not exceeding Rs. 20. But in case he gives any false information to the registrar or to any other person on matters in which he is required by this Ordinance to give information, he is liable to a fine not exceeding Rs. 50 or to imprisonment, with or without hard labour, not exceeding 3 months. A fee of 25 cents is charged to the master on engaging a new servant, a like fee of 25 cents is charged to the servant on his provisional registration, or on registration being confirmed, or for registration of previous service or antecedents. But in case of loss or destruction of the pocket register the servant has to pay one rupee for the issue of a duplicate pocket register.

A similar Ordinance (No. 17 of 1914) has been introduced in the Straits Settlements, where its operation has been limited to such local areas as may be declared by the Governor in Council, and its application within such areas has been

# Sea Routes between India and Europe.

The Indian port for the direct journey to and ; The Indian port for the direct journey to and from Europe is Bombay. There are ordinarily five lines of steamers by which the journey to and from the West via Bombay can be performed, either by sea all the way, or—and in some cases only—by sea part of the way and by rail across Europe. They are the P. & O., the Anchor Line, the City and Hall Line and the Lloyd Triestino. The Natal line steamers are available for Western passages only, the steamers sailing round the Cape on their Eastward voyages. There are ordinarily other services between Calcutta and the

West, by steamers sailing round Ceylon, and West, by steamers salling round Ceylon, and several lines connect Colombo with Europe. Of the latter the Orient, the Messageries Maritimes, the Bibby Lines, N.Y.K., Australian Commonwealth, and Royal Dutch Lines are the chief besides the P. & O. The Bibby and Henderson services extend to Rangoon. The new railway between India and Ceylon greatly increases the importance of the Colombo route for Southern India. The shortest time between London and India. The shortest time between London and Bombay is 13 days via Genoa or Venice. Eastward voyages. There are ordinarily following are the fares which are convertible other services between Calcutta and the approximately current rates of exchange: following are the fares which are convertible at

### CIVIL AVIATION.

The development of internal aviation services | development of air services in India must await service between Karachi and Bombay.

money available for such a purpose, a general aircraft from other countries.

in India was first essayed by Lord (then Sir more prosperous times. The pressure of George) Lloyd, during his Governorship of external conditions in favour of Indian aerial Bombay (1918-29). Lord Lloyd succeeded in enterprise gradually increased. The inaugurasecuring the inauguration of a postal mail tion of French and Dutch air services across This India, as well as the institution of a regular service between Karachi and Bombay. This India, as well as the institution of a regular was carried in R.A.F. machines. The use of weekly sorvice between England and Karachi, these aeroplanes complicated the matter from the outset. The service was not warmly supported by the public. The effort failed.

The general attitude of the Government of India for some time after this was that as no air services in the world had yet been run without a Government subsidy and as India had no obligation to provide ground facilities for money available for such a supresse.

The problem of internal air services was freshly taken up by the Government of India in the Department of Industries and Labour when Sir Bhupendranath Mitra was member of Government for that portfolio. Force of circumstances had already necessitated the appointment of a Director of Civil Aviation and the first holder of the post was Lt.-Col. F. C. Shelmerdine, O.B. E.

Non-official members of the Assembly, under the leadership of Dr. Moonje, then an elected member, for some time strongly pressed Govern-ment to institute a practical system for the training of young Indians in Civil Aviation. They foresaw that the development of civil aviation in India was only a matter of time and their great desire was to prevent it following in the wase of the mercantile marine and the commissioned ranks of the army, in which Indians came to the fore under modern conditions only in time to be faced with competition by Britishers who were first in the field. The upshot of this agitation was an arrangement by which young Indians might be sent to England for training with a view to their future employment in the Civil Aviation Department as aerodrome officers, inspectors of aircraft and engines, etc. Eight lads were dispatched for the opening of this system. Others followed and results have been successful. These men are not trained primarily as commercial pilots, but a development of their training, if they show special aptitude and desire to adopt a pilot's career, is always in view. This is a wise precarter, is always in view. This is a wise pre-caution and some of them take pilot's cert-ficates. All of them receive a certain amount of training as pilots and they also go through a post-graduate course at the Imperial College of Science and Technology and a period of attach-ment to selected aircraft works and to the London Terminal Aerodrome at Croydon. The course leafs for two years and three months course lasts for two years and three months, during which time the men receive scholarships amounting to £240 per annum. A condition of eligibility for these scholarships is that appli-cants must possess a B.Sc. degree in engineering or physics.

In all, 8 Indians were trained as Government In all, 8 indians were trained as government Scholars and are at present employed in the Civil Aviation Directorate Of these, 6 are employed as Aerodrome Officers at Karachi, Allahabad, New Delhi, Calcutta, Akyab and Rangoon, the remaining two as Assistant Aircraft Inspectors at Karachi and Calcutta. In 1933, a further batch of 5 ground Engineers was sent to England for truitur in Advance was sent to England for training in advance aeronautical engineering. One was to undergo a course in oxy-acetylene welding and of the remainder two were to be trained in alreast and two in engine manufacture. The course is for a period of 21 years.

Internal Air Services.—Sir Bhupendra-nath Mitra was in due course obliged to reconsider the question of assisted internal aerial services in India. An arrangement was made by which the Imperial Airways' Service between Croydon and Karachi was, on 30th December 1929, extended to New Delhi, mails

special arrangement, the chief point of which was that the service was conducted by the Postal Department of the Government of India and that Imperial Airways chartered to them machines for the purpose. This meant, in effect, that the Western service of the Airways Company continued to Delhi, but that technically the service from Karachi eastwards, belonged not to them but to the Government of lake to them but to the Government of India. Passengers as well as mails were carried. On the expiration of the period for which the contract on these lines was arranged, the Government of India decided not to renew their charter with Imperial Airways and adopted the alternative course of contracting with the Delhi Flying Club to carry the weekly Karachi-Delhi air mails Chub to carry the weekly karacmi-Delhi air mais to and fro. Passengers were also carried by this service. This, like the earlier special arrangement with Imperial Airways, was obviously a transitional plan. It came into operation early in 1932. It filled the need of the moment, pending the development of a permanent scheme.

Before Sir Bhupendranath Mitra could critically develop the matter, he was succeeded in charge of the Departmental portfolio by Sir Joseph Bhore and the latter entered with enthusiasm into the problem. Its solution was largely assisted by a great deal of spade-work carried out by Col. Shelmerdine before he resigned his appointment as D.C.A. in order to take up the corresponding one in England. A scheme was worked out under the direction of Sir Joseph Bhore for the institution of a weekly air-service between Karachi and Calcutta in connection with the weekly arrivals and depar-tures of air mails conveyed by Imperial Airways, Ltd, from and to England If the Government of India had at this tune taken no steps towards the organisation of a service of the kind, they would have been unable to prevent Imperial Airways or some other non-Indian concern from establishing one and the authorities in India were determined that evil aviation within India should be Indian in character, either through the development of private enterprise or through the institution of Governmentowned services.

The arrival of acute financial stringency following on the world depression, necessitated the abandonment of the Government karachi-Calcutta service in 1931. Four Avro-10 aeroplanes had already been purchased for the service and they were sold, one of them being retained for the use of Their Excellencies the Earl and Counters of Willingdon, who had newly arrived in India on the appointment of the Earl to be Viceroy.

Efforts to attain the desired result were revived successfully in 1933. A rangements were made with the British Government and Imperial Airways, Ltd., for the extension of the London-Karachi air service across India trom London-Karacin air service across India Irolin Karachi to Singapore, as a link in the England Australia air service. A private company Indian Trans-Continental Airways, Ltd., was formed with rupee capital and a majority of Indian Directors, in which shares are held by Imperial Airways Ltd. 51 no. 1 pulsar National from and for Europe being carried to and for limerial Airways Ltd. 51 p.c.; Indian National each week. This conveyance of mails between New Delhi and Karachi was performed under a lindia 24 p.c. This Company operates jointly with Imperial Airways, a weekly service from Karachi to Singapore, where it now connects with Qantas Empire Airways' weekly service from Singapore to Australia.

Indian National Airways Ltd was established largely barough the efforts of Mr. R. E. Grant Govan, C.B.E., to participate as a shareholder in Indian Trans-Continental Airways, and to develop teeder and other internal air services in North India. They run a bi-weekly service between Calcutta and Rangoon and a daily service between Dacca and Calcutta with prospects of extension to Assam. Under a ten year contract with the Government of Iudia, they have also instituted a weekly service from Lahore to Karachi, to link with Imperial Airways London-Karachi services.

Before all these developments, however, the first move had taken place in Western India Through the enterprise of Tata Sons Ltd., under a ten year contract with the Government of India, a teeder service was started in 1932 beween Karnelh, Bombay and Madras, connect-ing at Karachi with the London-Karachi service. It now includes Hyderabad in its schedule. An extension of the service to Colombo is contemplated.

In Burma, Irrawaddy Flotilla and Airways Ltd. operate a weekly service between Rangoon and Mandalay and hope to extend it to Moulmein and Tavoy.

From the beginning of the new year, Imperial Airways London-Karachi service, and with it, the Trans-India service up to Calcutta and the teeder services, Karachi-Lahore and Karachi-Bombay-Madras, have been operated twice

Instruction in Aviation.—Instruction in Aviation is given in India through Clubs founded for the pulpose. There are nine of these, Above them is the Aero Club of India and Burma, Secretary, Flight Lieut, G.V. Carrey, which exercises control and general coordination of activities under the Director of ordination of activities under the Director of Civil Aviation in India The nme instructional clubs are the Delhi, U.P., Bengal, Madras and Bombay Flying Club, Rarachi Aero Club, Northern India Flying Club, Lahore, Jodhpur and Kathiawar Flying Club, Lahore, Jodhpur and Kathiawar Flying Club (A Punjab Flying Club at Lahore, lost its three aeroplanes in crashes and had to wind up Its place has been taken by the Northern India Flying Club. A Club has recently been formed in Rangoon known as the Burma Flying Club. Indian National Airways, Ltd. have also established a Flying School in Rangoon have also established a Flying School in Rangoon for the training of pupils in aviation. The institution of two other clubs in the C.P. and Hyderabad Decean respectively is in prospect.

The Club movement dates from March 1927, when, as a result of the interest taken in the subject by Sir Victor Sassoon, Bt., M.I.A., it was discussed by the Indian Legislative Assembly. An encouraging atmosphere was the formal from thus created and in the same month the Aero Calcutta to Bombay with a halt for one night Club of India was formed, composed of about at Campore. Six months' notice was given 40 members of the Assembly. Its first meeting

was held in Simla in September of the same year and during the next three months 100 more members of the Assembly and 197 other members joined Strong committees were then formed in Delhi, Calcutta, Bombay and Allahabad, with the object of developing interest in the movement and in order to utilise the Government grants which were at this time proposed and the formation of local clubs followed. The Acro Club entered into an agreement with the Royal Acro Club of Great Britain and thereby became its official representative in India and Burma.

Legislation. -Air navigation in India was till recently governed by the Indian Aircraft Act, 1911. It was found to be very much out of date in the force of the rapid development of aviation and in August 1934 the British Indian Central Legislature created the Indian Aircraft Act, 1924, replacing the old Act, giving powers to them Government of India to make rules to meet modern developments and to enable them to implement the provisions of the International convention for the Regulation of Aerial Navigation, 1919, to which India is a party. During the same session, legislation (the Indian Carriage by Air Act) defining the law of Carriage by air in India was also carried

Indian Air Races.—The Government of India, in December, 1927, received from Sir Victor Sassoon a letter saying that subject to a grant of Rs. 30,000 to the Aero Club for the year 1928-29 and a grant of Rs. 20,000 to each club, formed, he would bear any deficit between the Club's income and expenditure until the grants became available. This they agreed to and they further announced that they would provide for each club an initial equipment of two aeroplanes, a spare engine and a contribution towards the cost of a hangar where no hangar was already available grants commenced as from the 1st April 1928, and were to continue for two years. Agreements were entered into between the Secretary of State and the provincial clubs, laying down the conditions of financial assistance. Moth aeroplanes manufactured by the De Haviland Aircraft Co. were selected as the training machines. Eight of these arrived in December 1928, and training with them began in January 1929.

The first Indian air-race was flown over a Delhi-Agra-Jhansi-Lucknow-Agra-Delhi course in February 1932, and was very successful. There was a similar race over approximately the same course in February 1933, when the entries were good and included two competitors who specially came out from England for the contest and the event was again completely successful.

The origin of these two races was the offer by Their Excellencies the Viceroy (the Earl of Willingdon) and the Countess of Willingdon, of a Challenge Trophy for such a race.

There was no race in 1934. One was programmed for December, 1934, to be flown from

Viceroy's Challenge Trophy, were offered, but rapidly uncreases. The running of the first only six entries were received. The Aero race cost Rs. 5,600 and that of the second Club Committee in their announcement to Rs. 5,354. this effect said that in their opinion the programme was too ambitious for the class of competitors who had hitherto entered, most of whom could not afford to fly to the start, race over 1,200 miles and then fly home again. They added, "Air racing, like every other form of racing, costs money and can only be encouraged by the patronage of wealthy sportsmen and in India this has been the exception rather than the rule up to now" The funds annually available to pay for the race are limited and as soon as the length of the race and the number of stops are increased the cost of organisation | 1 S E ,

The Club are now endeavouring to organise a further race on a progressively large scale in the early part of 1936.

Director, Civil Aviation -MI, F. Tymins. C.I B., M C

Deputy Director, Civil Aviation -Mr. A T E Eadon.

Chuf Inspector of Avreraft .- Mr. A S. Lane,

Engineer Officer .- Capt. A. G. Wyatt, R.F. Engineer Officer .- Mr. H. J. Paterson.

## THE SUEZ CANAL

Transits through the Sucz Canal during the of Sydney, there is no eastern port which at year 1934 amounted to 5,663, and receipts low tide has a greater depth of water than that amounted to 856,410,000 francs, compared with now provided in the Canal throughout the full 5,423 transits and 852,280,000 francs in 1933. Thus, in spite of the 41 per cent reduction in dues which came into force on April 1 last, recipts were over 4,000,000 francs higher. But for a sharp fall in the last two months of the year, the receipts for 1934 would have been very much better, for at the end of October the gain over the corresponding period of the previous year was nearly 16,000,000 francs. The subsequent setback was largely the result of a severe contraction in demand in Eastern freight markets during the last quarter of the year. Recently there has been a slight recovery in the East which, if continued, will favourably affect the canal traffic The December figures, which are announced with the results for the year, were 466 transits and 70,560,000 francs receipts, compared with 488 transits and 77,310,000 francs in December, 1933.

Improvement Schemes.—It was announced in 1914 that from and after January 1st, 1915, the maximum draught of water allowed to ships going through the Suez Canal would be increased by 1 ft., making it 30 ft. English.

The maximum permissible draught of ships using the Canal was 24 '4 feet in 1870; in 1890 ships drawing 25 . 4 feet could make the passage; and during the following 24 years the increase has been at the average rate of about 1 foot every six years, thus bringing the maximum draught authorized to 29 feet.

The scheme of improvement adopted by the Company on the recommendation of the International Consultative Committee of Works, the British representatives on which are Sir william Matthews and Mr. Anthony Lister, is a comprehensive one, and the details suggest that it will meet the needs of the big ship.

now provided in the Canal throughout the full length of nearly 105 miles. In any case the work in hand should meet the needs of any ship likely to be built for the eastern trade during the next few years.

When the Canal was opened in 1869, the width was 72 feet and the depth about 26 feet 2 inches, in June, 1913, the width at a depth of 32 feet 8 inches had been increased to a minimum of 147 feet 6 inches over a length of about 85 miles, and to a width of 328 feet over a distance of about 20 miles. The latest scheme makes provision for a depth of 40 feet throughout and for a widening up to 196 feet 8 inches in the south section, and the cutting of an appropriate number of sidings in the north and central sections, where a minimum width of 147 feet 6 inches is believed to be sufficient for the requirements of the immediate future.

The work of enlarging the capacity of the Canal presents no special difficulty on the engineering side. A good deal of sand is occasionally driven into the channel at Port Said during storms, but a remedy for this will be found in extension of the west breakwater by about 2,700 yards at a cost of over £6,000,000. The construction of this extension, which has been in hand for the past two years, is making satisfactory progress. The Suez Roads are being adequately dredged in accordance with an agreement between the Egyptian Government and the Company.

Almost up to the end of 1915 the works for extending the jetty to the west of Port Said, works of capital importance for the protection of the entry to the Canal were pushed on uninterruptedly. In November, however, for want of hydraulic lime, the manufacture of artificial rocks for this jetty was interrupted. The submarine foundations in stone and rubble A 40 Feet Channel.—The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly greater depth of water than that available in ports east of Suez. It is claimed that, with the exception of any apprehension as to its future.

# Travel in India.

only to the wealthy, the leisured and those who had friends in the country. The cost of the journey was very high, the methods of transportation were very slow; and the facilities for travel were so indifferent that he was a bold man who consigned himself to the mera bold man who consigned ministrate to the mer-cies of the country without a sheet of letters of introduction. Now the mail which is posted in London on Thursday night, reaches Bombay in 14 days, and the passenger can travel by the same route and with the same speed as the mail. It is also possible to reach Bombay in 11 days from Genoa or Venice by means of the Lloyd-Triestino line. A dozen lines have covered the sea route between Europe and India and Ceylon with a plexus of regular services while Imperial Airways have a weekly service from Croydon to Karachi and from there the Indian State Air Service takes you to Delhi and before long it is hoped to Calcutta. The Indian Railways provide facilities on the trunk lines equal to many of the best services in Europe and the Indian hotel has grown into a really comfortable caravanseral.

The traveller to India has a choice of many ports by which he may enter. To the majority of visitors from Europe and the West, Bombay provides their first glimpse of India, while others enter by Calcutta, Madras and Karachi and via Colombo.

Owing to its geographical position Bombay is known as the Gateway of India through which for more than a century, the import and export trade of India has largely passed. Ash-purple against the dawn, the spurs of the Western Ghats, thrones of mystery, stand sentinel about the inner sanctuary of Bombay Harbour. Among and above chese mountain heights Wellington fought the battles which earned for weinington rought the batters which earned for him his early military greatness. Every schoolboy knows the story of the Mahratta campaigns; they are but one—the Mahrattas—of the races within races that populate this vast country where two hundred and twenty-two different vernaculars are spoken. There is never an end to the land of India. You will find the in its most unclodust form and next find life in its most up-to-date form and next to it the customs and habits of a nation which have not changed for hundreds of years. Life will surge past you in a picturesque procession. You will hear a medley of strange sounds—the tinkle of the temple bells, the throb of the drum, the chant of the 'muezzin' announcing that God is Almighty and Mohammed is his that God is Almighty and Mohammed is his Prophet, the song of the Sharma, the cry of the wild beast in the jungle. The tropical sun blazing like a ball of moiton gold in a tur-quoise sky, the silver moon sailing across the purple vault of heaven will awaken in you feelings which you have never known before. If the visitor seeks variety and picturesqueness, there is no region in all the world so full of vivid colour, of populous cities, of buildings designed by master architects of bygone days, of diverse building is better known than any other in the races, of absorbing subjects for study and world. Visit it by moonlight and later by

Thirty years ago, a tour in India was possible observation such as the customs, religions, philosophy and art of one of the oldest civilisations.

> To the true lover of nature, the botanist and the naturalist, India can offer every charm in forest, mountain, valley, cultivated plain, and wild waste.

> To the sportsman, it can furnish sport such as few countries can give; the tiger in the forest, the great mahaser in many rivers, the wily snipe on the jheels, the strong winged duck, the jinking pig and many another kind.

To the mountaineer, the Himalayas offer the highest mountains in the world and some of the few famous peaks which are still unclimbed.

To the statesman, businessman or politician who seeks rest and change without idleness, India presents a sense of busy administration, a nation in the making and an experiment such as has never before been tried.

Bombny itself is cosmopolitan like many of the world's great ports and in it you will find jostling each other in the streets representatives of half the races of mankind. The Towers of Silence and the Caves of Elephanta are among the sights to be seen. Elephanta is one of those delightful islands which are freely scattered upon the waters over which Bombay reigns as Queen.

But Bombay is a gateway and through it many interesting trips await the visitor and many interesting trips await the visitor and northwards to Delhi he has the choice of two routes either by the G. I. P. Railway via the Ellora and Ajanta Caves, Sanchi, Gwalior, Agra and Muttra or by the B. B. & C. I. Railway via Baroda and through Rajputana with its famous cities of Mount Abu, Udaipur, Ajmer and Jaipur to Agra and Muttra. If you decide to go by the G. I. P. Railway route you will to go by the G. I. P. Railway route, you will find at Ajanta frescoes which rival many of the old frescoes found in Europe while at Ellora are the most wonderful caves in the world, mountains cut into colossal sanctuaries. You will be able to compare the work of the Buddhists, the Jains and the Brahmins and learn more of Indian mythology than many hours of study will give you. At Sanchi are Buddhist buildings dating back to 150 B.C. The stone carvings are remarkable and are well worth a visit. As you proceed further north, Gwalior is reached. The great Fort of Gwalior has been described by Fergusson as "the most remarkable and interesting example of a Hindu palace of an early age in India." Seventy miles further on lies Agra India." and of all the romantic cities of India, Agra must surely come first for it contains that crowning glory in marble, the Taj Mahal. Generations have come and gone since that far day when that most splendid of emperors Shahjehan bowed his head before his wife's coffin in the vault of the finished Taj. The

daylight if you must. By moonlight its seduction is irresistible. Sit on the steps by the entrance gate and watch the moon drift above the trees and the ring of silver light stealing round the base of the dome and creeping gently upwards to the pinnacle. See it also in the fading evening light when amber and rose and gold, the sun sinks in the west behind the crenelated ramparts of Agra Fort. If you must visit it in the broad light of noonday then forget the first view from the gateway and wander awhile about the gardens where you will find exquisite glimpses of snowy structures so light and graceful that they seem to rest on air; of buoyant cupola and climbing campanile. Here is grandeur as well as beauty.

The Taj Mahal, however, is only one of the many interesting sights of Agra, and its Fort, 1tmad-ud-Daulah's Tomb, Akbar's Tomb, 5 miles from Agra, and Fatchpur Sikri, the deserted city of Akbar about 23 miles distant are all well worth a visit. No other fortress in the world presents so great an appearance of knightly splendour, of proud and noble dignity or, with a more sovercign grace, crowns its red bastions with so wonderous a collection of palaces, mosques, halls of state, baths, kiosques, balconies and terraces as Agra Fort, a mile and a half in circumference, with walls 70 feet high faced with red sandstone. vigorous style of decorative architecture that Akbar introduced into his red sandstone palaces was embellished by his grandson Shah Jahan who was largely responsible for the delicate inlay work and the low reliefs in white marble. There are no buildings to equal these except those found in the Palace in Delhi Fort which Shah Jahan built when he transferrred his headquarters to Delhi. Akbar's vigorous but supremely attractive style appears at its best in Fatehpur Sikri which he built in his joy at the realisation of his fondest hopes when his son Jahangir was born.

There in the year 1569 A.D. on a lonely eminence, Akbar founded his city and there began to rise as if by magic those great battlemented walls, the magnificent palaces and courtyards, the great mosque and the other superb specimens of the skill of the Moghul stone-masons which stand to this day a source of endless wonder and admiration to visitors.

The traveller moves northward past Muttra and Brindaban, famous places of Hindu pilgrimage due to their association with the birth and early life of Lord Krishna, until Delhi is reached. Delhi, the capital of India, in days gone by and now the Imperial Capital of India, has no rival in greatness, as all men know that he who holds Delhi holds India. Here the visitor will find much that will interest and enthrall him. Here he can trace the growth and fall of dynasty after dynasty, here he will find some of the best examples of the work of the Moghal Period at its zenith as he wanders with muffled feet in the great courtyard of the largest mosque in India, the Juma Masjid, or in Shahjahanabad, the Fort and Palace of Shahjahan whose halls rival those of the palace in Agra Fort with their delicate inlay work in marble and their gardens. Here are crumbling memorials of the Mutiny, Hindu Rao's house, Kashim Gate beneath which some still

salute dead Home and Salkhed as they pass, the tree encumbered sites of redoubt and battery, Nicholson's grave, Asoka's pillar, the site of the great Durbar.

Kutab, the first of the so-called seven cities of Delhi with its Kutab Minar, 238 feet in height, erected in the 12th century A.D. of rod and cream sandstone overlooks the plain where many of the pages of history were written. The Kutab Minar, tapering from the base to the summit, is divided by five corbelled balconies while on the fluting is carved an intricate design in which are introduced verses from the Koran. In the main courtyard stands the famous pullar of solid wrought iron devoid of rust and dating back to about 400 A.D. Visitors to Delhi should not miss seeing the Kutab for it is unique in India.

New Delhi, the eighth city of Delhi, is worthy to rank with its seven predecessors, Kutab, Siri, Tughlakabad, Jahanabad, Firozabad, Puarana Qila and Shahjahanabad, the present day Delhi. Here you find an example of town planning carried out by some of the leading architects and engineers in the world on a site where they could start with a free hand.

If you decide to take the route northwards from Bombay via Rapputana, then you will see another but equally interesting side of India. Rajputana, the land of chivalry, attracts the visitor as few places do. Alone at Udaipur is there, in its perfection, the fairy palace of one's childhood, just such a long cutaract of marble terraces and halls falling into the water of a mountain encircled lake, as the illustrator of an Andrew Lang fairy book delights to draw.

Mount Abu, the Rajput Olympus, combines the delights of a hill station with one of the historic homes of the gods. The Dilwara Temples, the masterpiece of Jain architecture, contain some of the finest carvings in India. Forests of marble columns, carved and polished till they resemble Chinese ivories, are linked by flying arches that twist and twine from pillar to pillar like exquisite creepers, softening outlines and producing the effect of a symphony of graceful movement.

Northwards from Delhi is the Punjab and the North-West-Frontier Province whence most of the recruits for the Indian Army come. Here you will find Amritsar, the home of the Sikhs, Lahore, one of the most ancient and famous cities of India, the Khyber Pass, the historic gateway into India from the North, the flourishing cities of the Canal Colonies which have risen up since British Engineers have harnessed the waters of the Punjab "the Land of the Five Rivers" which formerly ran to waste and many another city. Through the Punjabalso you will travel to reach Kashmir, famous since the days of the Moghul Emperors.

The glory of Amritsar is the Darbar Sahib (the Golden Temple). The pavements of the sacred tank are all of marble from Jaipur and the tank itself contains a sheet of water 510 feet square. In the midst approached by a marble causeway, rises the Golden Temple, nearly cubical in form and decorated with wonderful richness.

Lahore grew in importance with the dawn of Moghul supremacy when Babar, the founder of that dynasty, made it a place of Royal Residence, reminiscences of which are to be found to-day in the pleasure gardens, tombs, mosques and pavillions of Moghul architectural beauty which have won undying fame for that dynasty here and elsewhere in India.

Khyber Pass, the great natural highway into India through the almost impregnable mountain barrier of the North-West Frontier, is rich in historical association and has from time immemorial been the route by which conquering hosts have passed into India to disturb the peace of her people and continually after their destiny. It is still the great trading route between India and the Central Asian States On Tuesdays and Fridays when the continual string of caravans of great shaggy camels laden with merchandise, accompanied by stern, strong and picturesquely dressed men with their women and children from Central Asia are moving to and from Aighanistan, the pass presents a most interesting and unique sight.

Kashmir, described by poets as "an emerald set in pearls" is a land of rich forcets and upland pastures, of slow flowing rivers and glittering mountain torrents, ringed with an almost unbroken girdle of mountain snow capped all the year. If you can imagine Venice set in the heart of Switzerland, that is Srinagar, the capital of Kashmir. Life is good as you the capital of Kashmir. Life is good as you glide along the face of the lakes in a houseboat when the lotus flower is out and the banks are one mass of colour with the snow-capped mountains in the background. When days are warm on the lakes, a trip can be made up the valleys and you can live in Arcady and see the bear in his native haunts and the mountain deer on the hill tops.

For those who have arrived at Delhi via Bombay an interesting return trip can be made via Benares and Calcutta. Many visitors, however, enter India via Calcutta and from here also many interesting tours can be made.

Calcutta, one of the first trading ports of the British East India Company in India, was founded by Job Charnock; it is now the second largest city in the Empire. Its public buildings, the Indian museum, the Fort, the Jain Temple, the Hindu bathing ghats along the river front, the Hindu shrines, are all worthy of attention.

Before winding your way towards Delhi trips should be made to Darjeeling to see the roof of the world and Mount Everest, the highest mountain and to Purl, the home of the famous temple of Jagannath. The ambition of every visitor to Darjeeling is to see Mount Everest, the world's highest peak, and, in order to do so they must travel some 7 miles away, past Ghoom station to Tiger's Hill (8,514 ft.) as from Darjeeling the mountain is not visible The best time to see sunrise on Mount Everest is in the early Spring or late Autumn. Then at the end you will find a view unequalled in any other part of the world. Twelve peaks over 20,000 feet with the awe-inspiring Kanchanjunga in the centre are spread out before you.

Puri also is an easy run from Calcutta. There in front of the gate of the temple is the famous black marble pillar, one of the most beautifully black marble pillar, one of the most beautifully and pay homage to the gallant band who held worked things in India with a tiny figure of the it during the Mutiny against terrific odds

Dawn on its capitol. Incongruous as it may seem, in Puri all caste vanishes. The significance of this can be understood only by those who know India. Once a year the image of Vishmu is carried in procession upon the famous Jagannath cars to the Garden Temple. These cars, 45 feet high, standing on solid wooden wheels, seven feet in diameter, are dragged along by the devotees.

Twenty miles north of Puri, along the sea coast, or 54 miles by motor road stands the Black Pagoda at Konarak, the temple of the Sun God Surya

On the road to Delhi, the visitor will travel through the Gangetic plain, one of the most truitiul areas of India. Here he will find cities sacred to the Hindus such as Budh Gaya and Benares, cities intimately connected with the mutiny like Lucknow and Cawnpore and other flourishing cities

Budd Gaya is one of the most famous and most interesting of all the sacred sites of the Buddhists for it is the scene of the "Great Renunciation" and the Enlightenment of Gautama atterward named Buddha. It marks the site of his long penance and his final victory over worldly desire.

Benares is reputed to be the oldest city in India, but there is no authentic record how old it is except that it is mentioned in those two great Hindu epics, the Mahabharata and the Ramayana, which deal with events long before the Christian era. Benarcs is, however, one of the most holy cities in India for the Hindu, and its spiritual significance is shown in the quotation. "Happy is the Hindu who dies in Benarcs, for he is transported at once to Siva's Himilayan Paradise on Mount Kailasa, north of Lake Manasa, where the great three-eyed ascetic seeing the past, the present and the future, sits in profound meditation.

Benares rests on the banks of the Ganges and floating down the river in a boat the sight of Aurangzeb's Mosque and the many picturesque temples and ghats recalls to one's imagination through the dim vistas of time the endless processions of devout people wending their way down the narrow lanes to the temples with fragrant garlands to hang round the necks of the gods or to wreathe in solemn devotion the emblem of Siva's divinity.

About 4 to 5 miles away from Benares lies Sarnath where Buddha preached his first sermon after obtaining divine wisdom at Gaya and in the adjoining Deer Park is a Museum of Archeology of vivid interest.

Lucknow is a city hallowed by memories of a grim struggle, of heroic deeds and noble sacrifice; its appeal to the Westernor is influenced by its historical connections, its beautiful buildings and the mysterious glamour so closely associated with the East. Legend connects the founding of the city with Lakshmana, son of King Dasaratha of Ayodhya and brother of Rama, the mythical hero of the Ramayana, the epic poem of the Hindus: but Lakshmanpur or Lucknow as it is now called was at its greatest under the five Kings of Oudh (1732-1856).

All visitors wend their way to the Residency

until relieved by Sir Colin Campbell. The deeds of Lawrence who was in command until he was killed and of Havelock who made his historic but unsuccessful attempt to rescue the garrison and was himself besieged are well-known.

Cawnpore is one of the most important industrial cities of India and here you will find up-to-date factories, a symbol of the West with the teeming bazaars where business is still carried on as it has been done for generations.

Northern and Central India is, however, not the only interesting part of India and the South can show you sights unlike those in any other part of the World. South India is a land of temples, full of the most wonderful carving while Mysore, one of the most progressive Indian States, can show you fine buildings, falls higher than Niagara and wonderful scenery.

Madras is the capital of the Madras Presidency and the third largest town in India, and the Presidency includes that part of India which was one of the first in which English and other foreign nations settled. The visitor will still find in the large houses belonging to the merchant Princes with their far spreading compounds, in the conveyances still used by the local lubabitants and in the scenery, which is the India of the old picture books, traces of what India used to be when first the English settled there.

Mysore commemorates in its name the destruction of Mahashasura, a mmotaur or buffalo headed monster by Chamundi, the form under which the consort of Siva is worshipped as the tutelary goddess of the ruling tamily. Mysore State is a picture-sque land of mountain and torest presenting the most diversified and beautiful scenery. The Capital which bears the same name as the state is a city with many fine buildings and a visitor to India who wishes to see the working of an up-to-date Indian States situated among wonderful scenery cannot do better than visit Mysoic. Elephants range throughout the southern forests and from time to time keddah operations are undertaken when wild elephants are captured in stockades. Tigers, leopards and bears are numerous and bison are found in certain forests. The famous Gersoppa Falls present one of the most beautiful sights of wild untarnished nature to be found in India. Many of the temples contain examples of the finest carving, and Seringapatam tamous as the capital of Tippu Sultan and about nine miles from Mysore is well worth a visit those who are travelling from Bombay to Colombo an interesting trip can be arranged via Mysore.

At Madura and Trichinopoly will be found examples of some of the best and most interesting work in South India.

Madura has been aptly described by European scholars as the "Athens of South India" and from time immemorial has been the abode of South Indian culture in all its aspects.

It contains one of the finest and largest temples in South India and unlike many other temples the tourist is allowed to wander without restrictions over most of it. Near Shiva's shrine and in the hall of Mantapam of a Thousand Pillars can be seen some of the finest carving in stone in all the world. The workmanship is so fine, the chiseling so delicate that one is lost in silent admiration as one looks at the representations of the Hindu Paintheon and at the graceful figures of men, women and animals.

Trichinopoly is noted for its rock temple and about three inles away is Srirangam with its famons temple which is claimed as the earthly abode of Vishnu the Lord of Creation.

No one visiting India should miss the opportunity of sceing Burma for it is a country of extraordinary charm, a country of contrasts. Whatever be your hobby, whatever be your interest, be it sport, history, ethnology or botany, or should you be increly fond of beautiful scenery you will find a greater variety in Burna than in probably any other country. You can see huge snowy ranges and alps spangled with rhododendrous and flowers unknown to science. You can find magmileent jungles almost inperietrable to man, bordering rishing torrents, or yet against you can see emerald green paddy fields and great winding rivers in the plains. Should you be adventurious and seek the wilder regions, you will find great apps in the troutler unvisited by civilised men and peopled by head limiters, Chins, Nagas and the flerce Black Lisu. Yet you will also find civilisation in the big cates like Rangeon and Maynyo. Rangoon, the capital, is of special interest in that it possesses the famous Shwe Dagon Pagoda, the Shered Golden Pagoda visited by more pilgrims than any other Buddhist Temple in Indo-China.

This short account of India is not intended to be comprehensive and does not even mention many of the intenesting places to be visited, but it is hoped that it will give some indication of the wonderful pageantry, the magnificent buildings of an older age, the sport, and the many things of interest which India and India alone can offer.

December, January and February are the most pleasant months for a visit to India. The days are pleasantly cool and except on the scaboard the nights are cold — India speaking broadly has no winter except in the far north It is a land of sunshine and colour. But the traveller arriving before November or staying in the country beyond the month of March must expect to find the tropical sun asserting its sway unless he wends his way to fur Kashmii or to one of the hill stations of India; Simla, the summer capital of India, Darjeeling the delightful or one of the many others situated among the hills of India.

### Standard Tours.

The planning of an itinerary for an Indian or Burman tour will depend upon the port of arrival, the port of departure, personal desires of the party and the time available. Any of the leading tourist agencies such as Thos. Cook & Son. Ltd., the American Express Co. Cox's & King's (Agents) Ltd., Army & Navy Stores, Grindlay & Co. Messrs, Jeena & Co., Bombay, etc., and the Publicity Officers of all the more important Rallways as well as the Manager, Indian Rallways Publicity Bureau, 57, Haymarket, London, and the Resident

Manager, Indian Railways Publicity Bureau, "Delhi House", 38 East 57th Street, New York, will work out tours to suit the convenence of individual parties. Many of the leading tourist companies will also arrange for inclusive and conducted tours. There are certain places, which are very well-known such as Delhi, Agra, Benares, Darjeeling, Jaipur, the Khyber Pass, Kashmir and Mysore, but there are innumerable other places almost as well known containing sights which cannot be equalled in other parts

of the world. Puri, Lucknow, Amritsar, Udaipur, Mount Abu, Gwalior, Ellora and Ajanta Caves and Madura are a few of them while in Burma, Mandalay and, the famous old cities of Ava and Amarpura nearby are well worth a visit.

A selection of itineraries for long and short tours in India and Burma is given below. These show what can be seen in certain periods of time, but they can be varied to suit individual parties or taken in the reverse direction.

Tour No. 1.—4 weeks.—Bombay, Udaipur, Jaipur, Peshawar, Lahore, Amritsar, Delhi, Agra, Cawnpore, Lucknow, Benares, Darjeeling and Calcutta.

Alternatives (a) Puri and Konarak in place of Darjeeling.

(b) Gwalior, Sanchi, Ellora and Ajanta Caves in place of Jaipur and Udaipur.

	1 <i>st</i>	2nd	Servants 3rd.
Total fare (approximate) on the basis or return tickets at 1½ single fares Calcutta—Darjeeling and Delhi—Peshawar		186-4 14 62	65 -12 5 20

Tour No. 2. -- 2 weeks.—Bombay, Udaipur, Jaipur, Delhi, Agra, Gwalior, Sanchi and Bombay. Alternative: Benares in place of Gwalior and Sanchi.

		1st	2nd	Servants 3rd
Total fare (approximate)	$\left\{ \left  \right. \right.$	Rs. 192 £ 15 \$ 69	96 7-10 34	32 2-10 11

If the alternative is taken, the fares are increased by about one-quarter.

Tour No. 3.-1 week.-Delhi, Lahore, Amritsar, Peshawar and Delhi.

	1st	2nd	Servants 3rd.
Total fare (approximate) on basis of return tickets at 1½ single fares.	Rs. 90	45	16-2
	£ 7	3-10	1-5
	\$ 25	13	4

Tour No. 4 .- 10 days .- Bombay, Poona, Mysore, Madras, Trichinopoly, Madura and Colombo;

		1st	2nd	Servants 3rd.
Total fare (approximate)	{	Rs. 212 £ 16 \$ 66	107 8 34	39 3 12

Note — If extra time can be allowed at  $\,$  Mysore, Somnathpur, Gersoppa Falls and Ootacamund can be visited.

Tour No. 5.-2 weeks.-Colombo Madura, Madras, Mysore, Ootacamund, and Colombo.

		1st	2nd	Servants 3rd.
Total fare by train (approximate)	{	Rs. 222 £ 20 \$ 63	124 10 32	45 8-10* 11

NOTE.—An interesting trip can be made after leaving Ootacamund via Cochin where the white Jews live, along the backwaters to Alleppey and Quilon by motor launch and motor car, down to Trivandrum, the capital of Travancore, by train, and by motor car to Cape Comorin, the southernmost point of India and, back via Trivandrum and Madura to Colombo. This would take about seven days.

<sup>\*</sup> Motor Mysore-Ooty from Rs. 75 additional per car.

Tour No. 6.-1 week.-Rangoon, Mandalay, Gokterk Viaduet, Mandalay-Rangoon.

				14	st	2nd	Servants 3rd.	Revise by r	d fare
Total fare (approximate)	••	••	{	Rs. £ \$	70 5 25	35 3 13	12 1 4	1st ret 2nd ,, 3rd ,,	102-3-0 51-2-0 17-2-0

NOTE -Many interesting trips off the beaten track can be made in Burina, but special arrangements are necessary.

For any visitor landing in Calcutta, it is possible to visit Benares, Agra, Delhi, Jaipur, Bombay, Mysore, Madras, Trichinopoly and Madura and still reach Colombo on the 14th day, but this entails sightseeing by day and travelling most nights and is not recommended for the ordinary visitor. A very attractive tour can, however, be worked out for a similar trip over a period of four weeks either allowing more time at the more important places or including other of the places mentioned in Tours I and 4 such as Darjeeling, Puri, the Khyber Pass, Lahore and Amritsar, Udaipur, etc.

Travelling in India is not expensive when the long distances travelled are taken into consideration. The first, second and Indian

servants fares are shown at the end of each tour. Hotel expenses average about Rs. 15 (22/6 or 51 dollars ) per person a day except when special rates are charged during certain special periods, while a motor car for the day can be hired for Rs. 25 to Rs. 30 (38/6 to 45/or 9 or 11 dollars) a day in most places, except when long distances have to be covered. Where the distances are short, tongas and two-horsed landaus can be used and the daily charges vary from Rs. 3-8 to Rs. 9 (5/- to 13/6 or 1½ to 3½ dollars). Guides with a good knowledge of English can be obtained from Rs. 5 to Rs. 10 (7/6 to 15/- or 2 to 4 dollars) a day.

It should be noted that the leading travel Bureaux will quote on application inclusive rates covering railway tares, hotel accommodetion motor cars, guides, etc

### PASSPORT REGULATIONS.

[Note.—These instructions are intended for the information of residents in the Bombay Presidency proper only. Residents in Sind should apply for passports to the Commissioner in Sind. Persons resuling outside the Bombay Presidency should apply for passports to their respective Governments or Administrations.]

### A.—British Subjects.

1. British Indian passports are issued only to:—(1) British subjects by birth, (2) wives and widows of such persons, (3) British subjects by naturalization and (4) British-protected persons

Before a subject of an Indian State is granted a passport he should show that he has severed all connections with his state of origin and is permanently residing in British India or produce a certificate to show that the state has no objection to the grant of a passport.

- 2. The Indian Passport Regulations do not require persons to be in possession of passports for leaving India, but as practically every other country requires travellers to be in possession of passports before they are allowed to land at the port of such country, travellers are advised to obtain passports before embarkation. Mem-bers of His Majesty's Naval, Military or Air Forces or of the Royal Indian Navv travelling on duty and members of the families of such persons when travelling to the United Kingdom on military entitled passages need not have passports.
- 3. Passports are not required for journeys by 3. Passports are not required for journeys by sea from Bombay to ports in India or to Burma; nor are passports required for permanent residents of Ceylon or India, being British subjects to travel between India and Ceylon. Natives of India travelling to the Federated Malay States or the Straits Settlements do not require passports unless they propose to continue their journey onward.
- 4. In order to obtain a passport, an application form (showing, among other things, the reasons for the proposed journey) should be filled in by the applicant and the applicant's declaration errified by a Political Officer. Magistrate, Justice of the Peace, Police Officer not below the rank of Superintendent, or Notary Public resident in India. Copies of the form can be obtained from any District Magistrate, from the Commissioner of Police, Bombay, by post from the Passport Officer to the Government of Bombay, by personal application at the Passport Office, or from any of the leading Banking and Shipping Agents in Bombay. Small duplicate unmounted copies of the photograph of the applicant and a fee of Rs. 6 in cash should be forwarded with the application form. Fces are not accepted in stamps or by cheque.
- The application form when filled in should either be posted with the photographs and fee to the Passport Officer to the Government of Bombay, or should be presented at the Passport Bombay, or should be presented at the rassport Office, Bombay. An applicant who forwards his application for a passport through the post may call at the Passport Office at Bombay to take delivery of it in person, but it is desired that the passport should be sent to him through

the post it will be sent to the local officer of the town in which the applicant resides who will hand over the passport to the applicant personally and take a receipt for it. Exceptions may, however, be made in the case of passports issued through reputable Shipping Agents or when the issuing authority is satisfied that the passport will be delivered to the holder.

- 6. The Passport Office in Bombay is situated in the Civil Secretariat. The office is open from 10-30 a m. to 6 p.m. daily, except on Saturdays when it closes at 2 p.m. and on Sundays and public holidays.
- 7. As a passport is valid for five years, there is no objection to anyone applying for a passport weeks or even months in advance of the date of sailing and much inconvenience will be avoided by carly application. A notice of at least four days should be given for the preparation of a new passport and at least two days for an endorsement, renewal or visa. The Passport officer cannot issue passports outside office hours and as the preparation of a passport takes time, applicants who postpone application to the last moment do so at their risk.
- 8. In certain circumstances. such as for Instance, cases of extreme urgency, the Passport Officer is authorised to issue a travel document called an "Emergency Certificate" on being satisfied as to the nationality and the bona fides of the applicant An application for an Emergency Certificate will on no account be considered, unless it is accompanied by duplicate unmounted copies of the photograph of the applicant.

Members of His Majesty's Naval, Military or Air Forces or of the Royal Indian Navy in uniform and bona fide Muliammadan pilgrims (Haj or Zair) holding individual pilgrim passes do not require passports for their journey to Iraq. All other travellers must be in possession of national passports and visas for Iraq. In the absence of Iraq Consular Officers in India, visas for Iraq are granted by Passport Issuing Authorities in India on behalf of the Iraq Government subject to the conditions stated below. The Iraq visas are of two kinds—Ordinary, valid for all entries into Iraq during a period of twelve months; and Transit, valid for a single journey only, allowing for stay of not more than filteen days in Iraq. The fee for these visas is the same as for British visas—vide paragraph 20 below. Iraq national passports are valid for return to that country without any further visa or endorsement.

Except in the case of bona fide tourists of ample and independent means, business representatives and employees of well established firms and persons with definite guarantee of employment in Iraq, visas for Iraq will not be granted without the previous permission of the Iraq Government. The Passport Officer will, on request, ask for this permission by post or, if the applicant is prepared to defray the cost by cable. Applicants must state clearly the nature of their business and give one or more references in Iraq to enable the local authorities to make inquiries regarding the purpose of their journey.

With the exception of tourists who may remain for three months in Iraq without registration, all persons are required to obtain a "permis de sejour" from the police within fifteen days of their arrival in Iraq. No endorsement of departure is required by foreigners leaving Iraq except the nationals of those states which require that Iraquis should obtain a departure visa, viz. Turkey, Persia and Afghanistan All foreigners proceeding by the Imperial Airways require a visa for Iraq on their passports and the exception mentioned in the following paragraph is not applicable to them

10. Arab Principalities in the Persian Gulf.—Passengers, both British and Foreign, proceeding by Eastbound aeroplane on the regular service to India do not require any endorsements or visas on their passports for any of the Arab Principalities Similarly, passengers by Westbound do not require endorsements or visas, for any of the Arab Principalities if they are booked to proceed to Basra and places beyond. When, however, they propose to discontinue their journey at Koweit, Bahrein, Sharah or Gwadur or to break their journey at any of those places, they must comply with the ordinary passport requirements regarding endorsements and visas

British subjects proceeding to any of the Arab Principalities require an endorsement and visa on their passports which are granted without prior reference to the authorities concerned in the case of all foreigners the previous permission of the authorities concerned is absolutely necessary. The fee in India for British subjects for transit and non-transit visas for any of the Arab Principalities is Re. 1.

### Egypt.

11. In the absence of Egyptian Consular Officers in India visas for Egypt are granted by Passport Issuing Authorities in India on behalf of the Egyptian Government. The fee for these visas is the same as for British visas—vide paragraph 20 below. All visas for Egypt placed on British passports are free of charge.

The Egyptian Government have prescribed rules which regulate the admission of foreigners into Egypt. Generally except in the case of British Government officials, bong fide tourists of ample and independent means and representatives of commercial houses of good standing, visas for Egypt cannot be granted whether for permanent residence or for a limited period without a reference to the Egyptian Government. In applying for visas for Egypt, a form of questionnaire laid down by the Egyptian Government which can be obtained from the Passport Office at Bombay, should be filled in. In addition, an applicant for a visa should supply in writing,

full particulars as regard the nature of his business in Egypt, the reasons for the journey, the proposed duration of stay in Egypt and what means he possesses.

No transit visa for Egypt can be given unless Egypt is necessarily on the route which the traveller must follow to reach his country of destination, and provided there exists no direct route by which he can reach that country without the necessity of passing through Egyptian territory.

Holders of the new-form Egyptian passport do not require visas to return to Egypt.

### Palestine.

12. Under instructions recently received from the Foreign Office, an applicant for an endorsement or visa for Palestine will be required either to deposit a sum of £60 to be refunded, it claimed within four months of the grant of the endorsement or visa, or to furnish a guarantee from a reputable bank for the same amount. Passport Control Officers have, however, been authorised to waive this requirement at their discretion, if they are satisfied that an applicant is a genuine tourist or pilgrim or a person of independent means.

The possession of a British passport endorsed for Palestine does not in itself guarantee the holder's entry into Palestine. Admission 'o Palestine is governed by the Immigration Ordinance. 1933. The Immigration authority may, under the Ordinance, require from travellers, a cash deposit of £60 in respect of each person arriving at a port of Palestine and seeking to enter therein as a condition of his admission into the country and as a guarantee that he will leave the country within a period of three months, or such extended period not exceeding one year, as may be authorised by the Immigration authority.

Tourists.—Holders of British passports endersed as available for travelling to Palestine are reminded that the endorsement has been granted on the condition that it is not their intention to remain indefinitely in the country or to seek to obtain work there. Any person who ignores this condition, without permission from the Director of Immigration, is liable on conviction to not more than six months' imprisonment or to pay a fine of \$100, or both penalties. He is also liable to deportation at his own expense.

A tourist may not remain in the country more than three months unless he applies for and recoves during this period permission from the Director of Immigration to remain in the country as a tourist, which may be granted for an additional period of not more than nine months, or permission to settle in the country. If permission is refused, such person must leave the country immediately. If he does not do so he will be hable to the penalties mentioned above and also to deportation.

Immiquants.—All persons visiting Palestine except as tourists or in transit for another destination require to obtain in advance a permit from the Department of Innigration at Jerusalem, particulars of which must be endorsed

on the passports. A fee of Rs. 1-8 is payable ever including Palestine. for which country for an endorsements for Palestine on both British Indian passports.

### Other Countries.

13. Restrictions exist on travel to various parts of the British Empire and to certain ioreign countries Among these may be mentioned Afghanistan, Australia, Canada, Fiji, Madagaskar, Mevico, Mohammerah and Abadan, New Zealand, Northern and Southern Rhodesia, Union of South Africa, South-West Africa and the United States of America. The restrictions apply particularly to Indians. Detailed particulars with respect to each country will be supplied on application.

### Foreign Countries.

14. Passports for journeys to or through foreign countries require, after issue, the visa of the Consul concerned. The addresses of the the Consul concerned. The addresses of the foreign consulates in Bombay will be found in the appendix below. Visas are, however, not necessary for Austria, Belgium, Czechoslovakia, Benmark, France, Germany, Holland, Iceland, Italy, Liechtenstein, Luxemberg, Norway, Portugal, Sarro, Spain, Sweden and Switzerland provided the names of these countries are provided the manuscript by a British Passport issuing authority Pilgrims holding pilgrim passes for Iraq are warned that should they desire to proceed to Persia they should obtain a visa on their pass from a Persian Consular officer in India. All intending pilgrims holding pilgrim passes and proceeding to the Holy shrines in Iraq or Persia are warned that if they do not set out on their journey on or about the date specified on their passes they may be refused permission to land in Iraq or Persia.

15. A passport is valid for five years from the date of issue and is renewable for a further period of from one to five years from the date period of from one to five years from the date of expiry of its validity, at the option of the holder, but in no case can a passport be extended beyond ten years from the original date of issue. On expiration of this period, or, if at any time the space provided for visas is covered and the holder wishes to travel to countries for which fresh visas are required a new passport must be obtained. Application for renewal must be made in the prescribed form, copies of which may be had from any of the officers mentioned in paragraph 4 above. The fee for renewals is Re. 1 for each year, or portion of a year, for which the passport is renewed.

### Endorsements.

16. A passport is valid only for the country or countries endorsed on it and fresh endorse-ments from a British Passport authority are not needed during the validity of the passport for subsequent journeys to these countries. for subsequent journeys to these countries. 22. The notice of a foreign passport who mee Fresh endorsements may, however, be obtained to obtained a visa granted by a British Passport on the passport for additional countries. Pass-Authority outside India for a destination which ports endorsed as valid for the British Empire involves landing in, or passing through, India are also available for travelling to territories does not need a further visa from the authorities under British protection or mandate, not how-

the passport must be specifically endorsed. The fee for endorsing the names of foreign countries on British passports is Re 1, but no fee is charged for this purpose on British Indian passports.

### Marriage.

- 17. A lady on marriage or re-marriage requires a fresh passport.
- 18 In the case of a joint passport issued in iavour of a husband and wife, the latter cannot travel alone on it, but should take out a fresh passport, surrendering the joint passport for cancellation of her name from it. The particulars of a wife cannot be added to her husband's existing passport. The holder of the passport should either apply for a new joint passport or his wife should apply for a separate passport in her own name.

### B .- Foreigners.

19. Foreigners proceeding direct to their own country, or to, or through, any other foreign country or countries do not require a British visa on their passports. The nationals of the following countries do not require a British visa for travelling to the United Kingdom. The concession also applies to certain nationals proceeding to certain British Dominions and Colonies and information on this point can be obtained from the Passport Office. The concession does not apply to India ---

Austria, Belgium, Czechoslovakia, Denmark, France, Germany, Holland, Iceland, Italy. Lechtenstein, Luxemburg, Norway, Portugal, Sarro, Spain, Sweden and Switzerland.

- 20. Foreigners who are subjects of the countries shown in the appendix below and who are travelling to British territories for which a British visa is necessary should first obtain passports endorsed for the British territory concerned from their consular representatives and should then present them to the Passport Officer for visa, together with a written statement of the reasons for the journey. British visus are of two kinds, riz. the Non-transit and Transit. The fees for these are Rs. 7-0-5 and Rc. 1-0-0, respectively, except in the case of nationals of States which levy higher fees, when the retaliatory scale of fees will be applied.
- 21. Other foreigners should apply for Emergency certificates through the Commissioner of Police, Bombay, or, where such foreigners reside in the mofussil, through the District Magistrate of the district in which they are residing. Small duplicate copies of the applicant's photograph must accompany the application. The fee for an Emergency Certificate is Rs. 1-8-0.
- 22. The holder of a foreign passport who has

### ADDRESSES OF FOREIGN CONSULATES IN BOMBAY.

# Hill Stations.

In India especially during the months of April and May, and at Christmas time, everybody tries as much as possible to take a holiday in the hills. Being anything from 2,000 to 8,000 feet above the level of the sea and difficult of access for motor traffic, the hill stations are delightfully cool and peaceful. Here one can usually ride, walk, play tennis and golf, or simply laze in beautiful surroundings and forget all about the trials of work and prickly leat. These are the principal hill retations in alphabetical order:—

Darjeeling. (8,000 ft.)—From Darjeeling the highest mountain peaks in the world can be seen. The temperature averages 2° above that of London all the year round; that is, it neither exceeds 80° in summer nor falls below 30° in winter. Darjeeling is the summer seat of the Government of Bengal. To reach it, the traveller must start from Calcutta by taking train to Siliguri, a journey of 10 hours. From Siliguri the journey is completed either by motor or hill railway in about 6 hours. The principal hotels in Darjeeling are the Mount Everest, the Grand (Rockyille), and the Park.

Kangra Valley.—The Kangra Valley is situated about 100 mules east-north-east of Lahore at the foot of the Dhaula Dhar Range of the Himalayas. There are magnificent landscapes and many historic temples and buildings. The visitor must take train from Lahore to Pathankot where he changes over the newly-opened narrow-gauge railway running between Pathankot and Jogindarnagar in Mandi State. Places to stay at are Dalhousie, Dharmsala and Kangra. The best hotels at Dalhouse are Stiffle's Grand Vlew and the Arraumoor; and at Dharmsala the Switzes's.

Kashmir.—Perhaps the most famous beauty spot in the world can be reached by taking train (either G. I. P. or B. B. & C. I.) from Bombay to Rawsipindi (about 48 hours) whence the remainder of the journey is accomplished by motor. The average height of the valley is about 6,000 feet, and it is entirely surrounded by the lofty, snowy outer ranges of the Karakoram and Himalaya. Visitors usually stay either at Srinagar or Gulmarg. At Srinagar one can live at Nedou's Hotel or in boarding houses, or one can lire a houseboat and live on the Biver Jheium. At Gulmarg Nedou's is the only hotel. As at Srinagar visitors usually take up their quarters in wooden huts rented through the Srinagar agencies or in tents.

Kodaikanal. (7,000 ft).—Regarded by many as the most beautiful of South India's hill stations, is situated on the precipitous southern side of the Palni Hills overlooking the plains. Reached by metre-gauge from Madras to Kodaikanal Road and thence by a 4 hours' motor rum. The Cariton is the principal hotel. There are also boarding houses.

Matheran. (2,500 ft).—The nearest hill station to Bombay, ideal for walkers and any body wanting rest and quiet. Reached by taking train from Victoria Terminus, Bombay, to Neral (about 1‡ hours) whence Matheran may be reached by hill railway (2 hours) or by pony, rickshaw, or on foot by a good walker. Stay at the Rugby Hotel.

Mahsbleshwar. (4,500 ft.)—Until recently, when expenditure had to be cut down, the summer seat of the Government of Bombay. Those who do not motor the whole way from Bombay, a distance of about 180 miles, usually take train to Poona and then hire a car from Poona to Mahableshwar. Mahableshwar is noted for its delightful vegetation: orchids and likes bloom in April and May. Hotels:—Race View and Frederick,

Mount Abu. (4,500 ft.)—An ideal place for combining the pleasures of a mountaineering holiday with the interests of an archeological excursion. Reached by B. B. & C. I. trains to Ahmedabad, thence by metre-gauge to Abu Road, whence the journey is completed by car. The Rajputana Hotel is recommended. There is also a Dak Bungalow containing four furnished rooms, permission to use which must be obtained from the Assistant Engineer, P.W.D., Mount Abu

Murree. (7,000 ft.)—The summer headquarters of the Northern Command. Magnificent views and walks. Visitors take train to Rawalpindi whence they complete the remaining 37 miles by car. The principal hotels are the Cecii and the Viewforth.

Mussorie. (7,500 ft.)—Much frequented on account of its exceptionally fine climate. Reached from Bombay by G. I. P. or B. B. & C. I. trains to Dehra Dun, a journey of 35 hours, where it is necessary to change over to motor which reaches Mussoorie about two hours later. The leading hotels are the Cecil, Charleville, Hackman's Grand, and the Savoy.

Naini Tal. (6,500 ft)—Is the summer residence of the Governor of the United Provinces. From Bombay there are two ways of getting there. The first is to take either G. I. P. or B. B. & C. I. train to Muttra, thence by metre-gauge to Kathgodam, and thence by motor (2 hours). The second route which takes about 5 hours longer is to take G. I. P. train to Lucknow and then change over to the metregauge rallway. The Grand, Metropole and Royal are the best hotels.

Octacamund.—Familiarly known as Ooty is situated on the famous Nilgiri Hills at an altitude of 7,500 feet. The mean average of temperature for the year from sunrise to sunset is 57.33 degrees. Ootacamund is the administrative centre of the District and the seat of the Madras Government for six months of the year from April to September. Reached either by

taking train to Mysore (40 hours from Bombay) and then changing to motor-car for five hours, or by taking train to Mettupalayam Via Madras

and thence by hill railway to Octacamund.
The principal hotels are the Savoy and Cecil.
Pachmari. (8,500 ft.)—Situated on a plateau
in the Mahadeo Hills, is the summer quarters of
the Government of the Central Provinces. A delightful hot-weather health resort. Reached by G. I. P. railway to Pipariya Via Jubbulpore, and a two hours' motor journey. The best hotel on the Hill.

Simla. (7,000 ft.)—The summer headquarters of the Government of India, is situated on several small spurs of the lower Himalayas. Towards the end of September, and in October and the end of September, and in Occober and November Simia enjoys the best climate in the world. Reached from Bombay by taking G. I. P. or B. B. & C. I. train to Kalka and thence either by hill railway or motor. There are many good hotels and boarding houses. The leading hotels are the Cecil, Clarks, Corstorphans, Grand, Gables (at Mashobra) and Wildflower Hall (Mahasu).

### CLIMBING IN THE HIMALAYAS.

Owing to their immensity and the time and cost involved in undertaking expeditions into the Himalayas a great deal of mountaineering and exploration remains to be done in the world's highest mountain range. There are over fifty summits of 25,000 tt. and of these only one. Kamet (25,447 ft.) has been scaled, whilst there are innumerable lesser summits of such formiare innumerable lesser summits of such formi-dable difficulty, owing to the comparatively recent geological formation of the range, that judged by modern mountaineering standards the majority are inaccessible. The highest peak is Mount Everest, which by latest measure-ments is 29,141 ft. Next come Kanchenjunga and K2, both about 28,150 ft., though which is the higher of the two is not certain.

Pieneer Climbers.—Mountaineering in the Himalayas began some eighty years ago when surveyors crossed high passes and scaled peaks in the course of their work. Among these in the course of their work. Among these pioneers must be mentioned the Schlagintwelt brothers, who in '855 reached a height of 22,329 ft. on the kastern Ibi Gamin, one of the subsidiary peaks of Kamet, whilst I. S. Pocock of the Survey of India set up a plane table at 22,040 ft. in the same district Amother notable early explorer was the famous botanist Sir Joseph Hooker who, in 1849, explored the Statem was the laws of Karchendurgs and red the Sikkim valleys of Kanchenjunga and made attempts to climb Kangchenjau, 22,700 ft. and Pauhunri, 23,180 ft. Some remarkable explorations were also carried out by the Pandits of the Survey of India. Among these men was Babu Sarat Chandra Das who traversed the Jonsong La, 20,200 ft.

Later in the nineteenth century came Sir Martin (now Lord) Conway who, in 1892, made explorations in the Karakoram Himalayas, particularly in the region of the Baltoro Glacier, the greatest of Himalayan glaciers, and climbed a peak of 23,000 ft. Sir Francis Younghusband also made explorations in the Karakorams and accomplished the first crossing of the Karakoram Pass. The Duke of the Abruzzi also made a number of expeditions into this range and reached a height of 25,000 ft. on the Bride Peak. Mountaineering developed rapidly in the "nineties", and a bold attempt was made by was made by a party of Bavarian Mountaineers A. F. Mummery, Professor N. Collie and Brigadier-General the Hon. C. G. Bruce to climb was reached on the north-east spur before bad Nanga Parbat. In a final attempt on the weather forced the party to retreat.

mountain Mummery and his two Gurkhas were lost. In 1899 D. W. Freshield made the first circuit of Kanchenjunga and explored the Nepal side of the mountain.

A New Phase.—Meanwhile, thanks to Brigadier-General Bruce, Gurkhas, and later Sherpas and Bhotias were trained for mountaineering and, with the advent of first class porterage, Hima-layan mountaineering entered on a new phase. Dr. and Mrs. Bullock Workman made a number of expeditions into the Karakorams and W. W. Graham made a number of remarkable ascents. with Swiss guides, including an ascent of Kabru, 24,000 ft., which has been the subject of much controversy. Kabru was later attempted by two Norwegians, Messrs. Rubenstein and Monrad Aas who got within a few feet of the

The present century opened with a number of remarkable ascents by Dr. A. M. Kellas, who died during the 1921 Everest expedition. He climbed several great peaks including Kangchenjau, Pauhunri and Chomiomo and made expeditions to the Central Himalayas where, with Colonel H. T. Morshead he reached in 1920 an altitude of 23,500 ft. on Kamet,

In 1907 Brigadier-General Bruce, Dr. T. G. Longstaff and A. L. Mumm explored the Garhwal, Himalayas and reconnoitred Kamet. After this Longstaff, with the Swiss guides Alexis and Henri Brocherel, ascended Trisul, 23,406 ft. which, until the Jonsong Peak, 24,844 ft., was climbed in 1930 remained the highest summit reached. In 1911 and 1912 attempts were made to climb Kamet by C. F. Meade and his Swiss guides and a height of 23,500 ft. was gained. Captain Morris Slingsby also attemp-ted Kamet at this time.

Attempts on Kanchenjunga.—The first attempt on Kanchenjunga was made in 1905 but ended in disaster, Lieut. Pache and three porters being killed by an avalanche. The second attempt in 1929 was made by a solitary American, E. F. Farmer, who lost his life. In the same years a determined attempt attempt. life. In the same year a determined attempt was made by a party of Bavarian Mountaineers In 1930 a fourth attempt was made by an 1931, and Capt. E. St. J. Birnie, E. E. Shipton International expedition led by Professor and Dr. C. R. Greene climbed Kamet G. Dyhrenfurth. The party attempted the with Mr. Smythe in 1931. The Expedition mountain from the Nepal side, but were repulsed reached Calcutta in February and forthwith by an ice avalanche which killed one of the proceeded to its main task. porters. Subsequently, they ascended a number of peaks including the Ramthang Peak, 23,200 ft. and the Jonsong Peak 24,344 ft.

The fifth attempt in 1931 was made by Bauer and his party, but failed at a slightly greater elevation than was attained in 1929. One of the arty H. Schaller and a porter were killed by a fall during the expedition.

In the summer of 1931 a party of young British climbers led by Mr. F. S. Smythe succeeded in reaching the summit of Mount Kamet (25,447 ft.) the highest mountain peak, though not the highest altitude ever reached by

Mount Everest.—A description of the attempts mount everest.—A description of the attempts to climb Mount Everest, the highest mountain in the world, may be divided under three headings: the reconnaissance expedition of 1921; the first attempt in 1922, and the second in 1924. A still further attempt is being made at the time of writing, in April, 1933.

The preliminary expedition for the reconnaissance of the approaches to Mt. Everest, carried out its work in the most complete manner under the leadership of Lt.-Col. C. K. Howard-Bury. The approaches to Mt. Everest on all its northern faces were thoroughly examined, and relations were established with all the local authorities. On the information and experience of the reconnaissance expedition the second expedition to Everest was organised and set off the following year under the leadership of Brig.-Gen, the Hon. C. G. Bruce. Capt. G. I. Finch and Capt. J. G. Bruce succeeded with the help of oxygen in reaching the height of 27,800 ft. During this expedition seven men were killed when an avalanche swept them over an ice cliff some 60 feet high. feet high.

The 1924 expedition was again commanded The 1922 expedition was again commanded by Brig.-Gen. Bruce. But owing to his ill health Lt.-Colonel E. F. Norton took on the command. Lt.-Col. E. F. Norton and Dr. T. H. Somervell reached a height of 28,200 feet. Then a final attempt was made by G. L. Mallory and A. C. Irvine. They were assisted by a supporting rark consisting of N. F. Oddil. by a supporting party consisting of N. E. Odell and J. de V. Hazard. On June 6th they left the 25,000 feet camp with three porters who carried loads for them up to 26,800 ft. On June sth they left camp for their attempt and were never seen again. On June 10th for the third time Odel climbed up to the 27,000 feet camp but could find no sign of Mallory and Irvine, and communicating with Norton evacuated the mountain.

The expedition of 1933 followed a successful effort by Lt.-Col. J. L. R. Weir, Political Officer in Sikkim, to obtain the permission of the Tibetan Government for a further attempt to climb the mountain. An Everest Committee was formed under the aegis of the Royal Geograwas formed under the aegus of the Royal deegraphical Society and the Alpine Club and Mr. Hugh Ruttledge, formerly of the I.C.S., accepted its invitation to take charge of an expedition. An extraordinary attempt to climb Everest Included in it as members were Mr. F.S. Smythe, leader of the successful Kamet Expedition of airman. Having penetrated Tibet in disguise

proceeded to its main task.

The expedition established its base camp in the Rongbuk Valley on April 17th and on April 21st. Camp I was established. Thenceforward the expedition was dogged by exceptionally bad pre-monsoon weather which greatly hindered the establishment of camps and made the ascent to the North Col. 23,000 ft. prolonged and arduous work. Camp IV, 22,800 ft. was not established until the middle of May after a 40 feet the well on the North Col. 21,000 ft. 40 feet ice wall on the North Col slopes had been climbed. The expedition was equipped with wireless which enabled weather reports to be received from the meteorological authorities at Alipore. One installation was at Darjeelinig, one at the base camp and a third at Camp III, 21,000 ft. Camp III was linked to the North Col by field telephone so that messages could be received up to 23,000 ft. from the plains of India in a short space of time.

Owing to a series of blizzards and high winds Camp V was not established until May 22nd. But it was pitched at 25,500 ft. several hundred feethigher than previously. The party was then cut off for three days by a furious blizzard and eventually had to retreat to Camp IV. The Camp was re-established on May 28th and on May 29th. Wyn Harris, L. Wager and J. L. Longland continued the ascent and finally pitched Camp VI at 27,400 ft., 600 ft. higher than in 1924, after a magnificent effort on the part of the porters. Longland then brought the porters down but had a terrible time in a blizzard and only by exercising great mountaineering skill steered them down to Camp V.
The following morning Wyn Harris and Wager made a reconnaissance of the route to the summit and failing to discover a route along the crest of the north-east ridge finally followed the same route as Norton in 1924. They were stopped by dangerous conditions at 28,100 ft. and returned dangerous conductors at 25,100 it. and returning to Camp VI where they met Shipton and Smythe who had come up from Camp V, after which they descended to Camp V. The following morning Shipton and Smythe were unable to leave Camp VI owing to a high wind but on June 1st they made their attempt on the summit.

An hour and a half after leaving the Camp Shipton had to return owing to some internal trouble. Smythe carried on alone and reached approximately the same point as Wyn Harris and Wager before he was forced to retreat and Wager before he was forced to retreat owing to the deep powdery snow resting on the steep slabs. Shipton descended to Camp V the same day in very bad weather and Smythe spent a third night at Camp VI descending to Camp IV next day in a blizzard. Owing to trostbites, strained hearts, and high altitude deterioration the party had to retire to the base camp. A week later they returned to Camp III to make another attempt. Owing, however, to the breaking of the monsoon this had to be abandoned and the expedition returned to

Aerial Expedition.—An interesting aside to the exploration of Everest was an aerial expedition undertaken in 1933 for the purpose of photograundertaken in 1933 for the purpose of photographing the mountain from the air. This venture was financed by Lady Houston. Major L. V. S. Blacker, formerly of the Guides, was its leader and in charge of its survey work, Lord Clydesdale chief pilot, Fit. Lt. A. McIntyre second pilot and Major P. T. Etherton, its London manager. major r. T. Etherton, its London manager. Two specially equipped aeroplanes, adaptations of the well-known Wapitl, were provided. A special point in their equipment was the provision of compressed oxygen for supply through gas masks to the aviators at high altitudes. all titudes. The expedition was not permitted to fly across the Tibetan frontier, so as to circle Mt. Everest, but both machines successfully flew over the peak and several good photographs were taken of it. By permission of the Nepal Government a line of flight from Purnea, the base of the expedition, across Nepal territory to Mt. Everest, was taken and along this good survey photographs as the somewhat poor visibility at the time of the flight, in April, permitted.

An interesting mountainflight of which An interesting mountainflight of which details were published in 1933 was one from Risalpur to filight and back, undertaken by the R. A. F. at Risalpur in the course of its routine duties in October, 1932. The expedition was commanded by F. Lt. Isaac and was made by five of the machines ordinarily in use by the Force The distance from Risalpur by way of Force The distance from Risalpur by way of the Indus Valley and past Nanga Parbut to Glight is 286 miles. It was covered in 2 hrs, 20 mins, on the outward flight and in 2 hrs 5 mins, on the return journey. From Glight the machines further proceeded upon flights over the Hunza, Nagar and Rakiot areas Brilliant photographs of Nanga Parbat and Rakaposhl, as well as of other places of importance or interest, were taken.

The year 1932 saw a well organised expedition to Mount Nanga Parbat. It was conducted by Dr. Merkl, of Munich, and Included Lt. R. N. Frier, of the Gilgit Scouts, who acted as transport officer, an American Mr. Rand Herron and Miss E. Knowtton, of Boston, U.S.A. Sewers! detarmined, attempts to reset the Several determined attempts to reach the summit of the mountain in August were brought to an end by the break-up of the weather before they attained success.

The Disaster of 1934.-In 1934 Herr Merkl returned to the attack with an even stronger

he marched to Everest and with a few porters succeeded in reaching 21,000 feet. He then went on alone and nothing more has since been heard of him. As he had no mountaineering established until the end of June. The party experience, it is presumed he perished on the slopes of the North Col.

Aerial Expedition.—An interesting aside to the exploration of Everest was an aerial expedition.

Are the days of the expedition of Everest was an aerial expedition both the proceeded to rush to the peak leaving only skeleton camps behind. Finally, after a height of 25,600 feet had been reached, and Camp VIII established at 24,800 feet, a terrible blizzard proke. The party retreated, but owing to the broke. The party retreated, but owing to the storm and ill-equipped camps retreat became a rout during which no fewer than nine lives were lost, Herren Merkl, Welzenbach and Wie-land and six Darjeeling porters—men who had accompanied the 1933 Everest Expedition Of the Europeans only the two Austrians Herren Schneider and Aschenbrenner escaped whilst of the surviving porters, all of whom were frostbitten one or two spent a week without food or shelter.

> This is the worst Himalayan mountaineering disaster that has yet occurred.

> Another expedition to the Karakorams took Anomer expedition of the leadership of Dr. G. Dyhrenfurth All four peaks of "Queen Mary" were climbed. The highest of these has been triangulated as 24,350 feet, but the party state it to be more than 1,000 feet higher,

> In 1934 Messrs, E E. Shipton and H. W. In 1934 Messes, E. E. Shipton and in. W. Tilman, by a magnificent piece of exploration and mountaincering, succeeded in penetrating the hitherto impracticable Rishl Ganga to the glacter basin of Nanda Devi, thereby solving a problem that had exercised the minds of Himalayan mountaineers for many years and completing the work of pioneers such as Dr. T. G. Longstaff and Mr. Hugh Ruttledge. Messrs. Shipton and Tilman also crossed from Badrinath to Gangotri via the Satopanth Pass and explored the head of the Gangotri glacier.

> Lt-Col C. F. Stoehr, R.E., and Lt. D. M. Burn, R.E., lost their lives on 12th August 1932, while climbing on Panjtarni, near Pahlgam in Kashmir.

Several expeditions have lately been made into the Himalayas by members of the Himalayan Club, especially expeditions into Sikkim by members of its Eastern Section.

The Himalayan Club.—Was founded on 17th February 1928, at New Delhi with the object of encouraging and assisting Himalayan travel and exploration, and extending knowledge of the Himalayas through science, art, literature and sport The initiation of this Club was due to the Hon'ble Sir Geoffrey Corbett, Secretary, Commerce Department of the Government of India, and to Major Kenneth Mason, M.C., R.E., Assistant Surveyor, General Its membership Assistant Surveyor-General. Its membership party, which included a number of well-known is over 350, including three lady members and German and Austrian mountaineers and Captains its president is General Sir Kenneth Wigram. Frier and Sangster of the Indian Army as trans- Major K. G. KcLean is Hon. Secretary.

# The New Capital.

The transfer of the capital of India from Calcutta to Delhi was announced at the Delhi Durbar on December 12, 1911. It had long been recognised as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India were located in one Province, and in the capital of that Province, the seat of the Programment. of that Province-the seat of the Bengal Government—for several months in every year. It was also desirable to free the Bengal Government from the close proximity of the Govern-ment of India which had been to the constant disadvantage of that Province. To achieve these two objects the removal of the capital from Calcutta was essential: its disadvantages had been recognised as long ago as 1868, when Sir Henry Maine advocated the change. Various places had been discussed as possible capitals, but Delhi was by common consent the best of them all. Its central position and the best of them all. Its central position and situation as a railway junction, added to its historical associations, told in its tayour; and, as Lord Crewe said in his despatch on the subject, "to the races of India, for whom the legends and records of the past are charged with so intense a meaning, this resumption by the Paramount Power of the seat of venerable Envire should at once anforce the conrable Empire should at once enforce the con-tinuity and promise the permanency of British sovereign rule over the length and breadth of the country."

The foundation stone of the new capital was laid by the King Emperor on December 15, 1911, the finally selected site being on the eastern slores of the hills to the south of Delhi, on the fringe of the tract occupied by the Delhi of the past. The land chosen is free from liability to flood, has a natural drainage, and is not manworn. It is not cumbered with monuments and tombs needing reverent treatmonuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi. A Committee consisting of Surgn.-General Sir C. P. Lukis, Mr. H. T. Keeling, C.S.I., A.M.I.C.E., and Major J. C. Robertson, I.M.S., was appointed to consider the comparative heaithiness of the site and of an alternative one to the North of the existing city. Their report, dated 4th March, 1913, states that "the Committee, after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior healthiness of the southern as to the superior healthiness of the southern

which gives the motif of the whole, is Government House, and two large blocks or Secretariats. This Government centre has been given a position at Raisina hill near the centre of the new city. Sir Edwin Lutyens is the architect for Government House and Sir Edward Baker for the Secretariats. The former building is estimated to cost approximately Rs. 140 lakhs and the latter groups were originally estimated to some Rs. 124 lakhs. The provision made in the design of the Secretariats for extensions in case if used has already partly been utilised. The Secretariat personnel has largely increased in the past few years and numerous additional rooms had to be provided to make room for Army Headquarters, which moved into the new capital at the end of the Simla season, 1929. To the east of the forum, and below it, is a spacious forecourt defined by an ornamental wail and linked on to the great main avenue or parkway which leads to Indrapat. Across this main axis runs an avenue to the shopping centre. Other roads run in different directions from the entrance to the forum. The axis running northeast towards the Juma Masjid forms the princi-pal approach to the new Legislature Chambers. They are officially described as the Council House and the road is named Parliament-street. The railway station for the new city finds its place about half way between the old and new cities off the road through Pahargunj, which lies to the west of Old Delhi in the direction of The Ridge. The main roads or avenues range from 76 feet to 150 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1,175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis.

For a temporary capital, for the use of the Government of India during the period of the building of the new capital an area was selected along the Alipur Road, between the existing civil station of Delhi and the Ridge. The architecture and method of construction were similar to those adopted in the exhibition buildings at Allahabad in 1910; but the buildings have outlasted the transitional period for which they are intended. Army Headquarters were still housed in them in the winter until the season 1929-30. They are now occupied for various purposes including the temporary accommodation of Delhi University.

as to the superior healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site."

The Town Plan and Architecture.—A great of the proving was entirely taken from the Delhi conditions of the lay-out, was dated 20th March, 1913. Work was begun in accordance with it and its main lines have been followed throughout. The population of the area originally main lines have been followed throughout, population of the Municipal town of Delhi The central point of interest in the lay-out, population of the Municipal town of Delhi

was 2,29,144. The plans of the New Capital headquarters of the Royal Air Force in India allow for a population within it of 70,000. were also housed in them in the winters of Its present population is approximately 40,000. Sites have been allotted for forty Ruling Princes and Chiefs to build houses for their own occupation during their visits to the new city, and several of these habitations have been erected.

There was, as regards architecture, a pro-longed "battle of the styles" over Delhi, Finally, to use the language of the architect, it has been the aim "to express within the limit Finally, to use the language of the architect, it has been the aim "to express within the limit which the builders have already had to carry-of the medium and of the powers of its users, the ideal and the fact of British rule in India, the ideal and the fact of British rule in India, provided for in the architects' plans. The Members of H. E. the Viceroy's Executive ment." The inspiration of the designs is manifestly western, as is that of British rule, but the first section of the extension Council including H. E. the Commander-Infestly Western, as is that of British rule, but the first section of the extension Council including H. E. the Viceroy is Executive to the council including H. E. the Viceroy is Executive to the council including H. E. the Viceroy is Executive to the council including H. E. the Viceroy is Execu of structural fitness and artistic unity.

Cost of the Scheme.—It was at first tentatively estimated that the cost of the new capital would be jour million sterling and that sum was given in the original despatch of the Government of India on the subject. Various factors after wards increased the amount, the chief of these being the immense rise in prices since the war, and the Legislative Assembly were informed by Government on 23rd March 1921, that the revised estimates then amounted to 130? Jukhe of wares. This amount included to 1,307 lakhs of rupees. This amount included allowances for building new Legislative Chambers and Hostels for Members of the Indian Legisand noscess for memors of the indian Legislature, which were not allowed for in the earlier estimates. The New Capital Enquiry Committee, in its report published in January 1928, estimated the total expenditure at Rs. 1,292 lakhs including Rs. 42 lakhs for loss by Exchange. Actual expenditure upto approximately the end of 1929 was Rs. 14 crores. This may be taken as the floure for the completion. may be taken as the figure for the completion of the main project,

The Project Estimate contains certain items such as land, residences, water supply, electric light and power, and irrigation on which recoveries in the form of rate or taxes will, in addition to meeting current expenditure, partially at any rate cover the interest on the capital outlay, whilst there are other items on which some return on account of the sale of leases, general taxes and indirect receipts is secured. The project, after being completed and closed was re-opened in 1933-34. This became necessary owing to the need to increase residential accommodation for officers and staff and facilitated by a period of cheap money. Government utilised the occasion for extending the residen-tial accommodation for visiting members of the Indian Legislature,

Progress of the work.—The construction of New Delhi was made at satisfactory speed, having regard to the curtailment of the Budget allotment in consequence of the war and the absence of officers and other establishments at the war. The Secretariats were so far advan-

residential buildings for Government officers and staff of various grades were then nearly com-pleted. The whole of the civil side of Government moved from old Delhi into their quarters in the new Secretariats on coming down from Simla in November, 1926. All Government Departments, including the Army Departments and Army Headquarters and R. A. F. Headquarters, have their offices in the new Secretariats, of His Excellency until then resided in the Delhi season at Viceregal Lodge in Old Delhi. The Government of India in 1927 devoted special consideration to the question whether would be four million sterling and that sum their ordinary annual 5 months residence in was given in the original despatch of the Gov. Delhi should be extended each year to 7 months and early in 1928 decided in consultation with the India Office to endeavour to stay in Delhi for half of each year, the new order being intro-duced for trial in 1928 by keeping the Secretariat in New Delhitill mid-a pril and bringing it down Simla from again in mid-October. The experiment was not very successful and was not repeated till 1932-33. When Retrenchment Committees had strongly recommended a longer stays n Delhi in order to extract rent for a longer period from the seasonal official occupants of its residential buildings, the rents in Delhi being higher than those for residences in Simla. It remains to be seen whether the consequent profit will exceed the additional general expense of keeping staff down in the heat. An early descent from Simia to New Delhi was postponed in the autumn of 1934 on account of a report by the Public Health Commissioner on the general unhealthiness of the Winter Capital in October.

Art Decorations.—The Government of India in 1927 approved a scheme for the encouragement of Indian artists by providing facilities for the decoration of certain buildings in New Delhi. The outlines of the scheme are briefly as follows the except approach. briefly as follows. A certain number of domes and cellings in the New Secretariat Buildings at Delhi suitable for decoration were selected. The various schools of art in India, as well as Individual artists, were invited through local Governments, to send in by the beginning of March 1928 small scale designs for approval by a Committee. After approval by the Committee both as regards the design and colour the pictures were to be drawn out and painted to full size on canvas, and, if finally approved by the Committee, fixed according to the marouflage process in situ. Other techniques, such as fresco or tempera, were optional. Artists or schools of art, who sent in small scale drawings, had to bear the initial expense of preparing at the war. The Secretariats were so far advan-them. When these were approved by the ced that there were transferred to them from Committee, the out-of-pocket expenses Calcutta in October, 1924, the offices of the pad in addition to a suitable honorarium Accountant-General, Central Revenues, and the Government undertook to pay for the finished

pictures done from approved sketches but developed and utilised. So far the plan for a give no guarantee that the finished paintings direct thoroughfare from the midst of the new give no guarantee that the missace paintings will permanently be preserved. Government intimated that historical or allegorical subjects would be given preference over religious ones, and English artists living in India were barred from competition, the work being strictly reserved to Indian artists. Numerous artists submitted designs, especially those of Western India and with such satisfactory Western India, and with such satisfactory results that the specially appointed Expert Committee approved of nearly all. A great deal of painting has now been completed and the work is continually progressing. Govern-ment, meanwhile, instituted a scheme for sending selected artists to Europe for finishing studies to enable them the better to join in the work, and this is in operation.

Opinion of the Legislature.—Considerable discussion regarding the new works took place in the Assembly in 1921. The following unofficial resolution was carried:—
"This Assembly recommends to the Governor-General in Council that in the interests of economy and of general convenience alike the execution of the programme of New Delhi works may be expedited and the necessary funds provided or raised so that the Secre-tariat and Legislative buildings and connected works including residences may be completed as early as practicable.

A non-official Member in the Legislative Assembly on 28th September, 1921, at Simla, moved a recommendation to Government noved a recommendation to Government "to appoint a Committee to inquire into the possibility of establishing a permanent Capital of India in a place possessing salubrious and temperate climate throughout the year." This proposal was ridiouled by several of his non-official colleagues and was eventually rejected without a division.

H.R.H. the Duke of Counaught, on 12th February, 1921, laid the foundation stone of & large group of parliamentary buildings on a site close to the south-east of the Secretariats. The building is an imposing pile circular in shape, consisting in the main of three horse shoe-shaped Chambers for the Chamber of Princes, Council of State and Legislative Assembly respectively and surmounted by a large dome over a Central Library connecting all three Chambers.

H.E. the Viceroy (Baron Irwin) proceeded in state to the new Legislative buildings henceforward to be known as the Council Buildings and formally declared them open on 18th February 1927. The India legislature began its sessions in them next day.

During 1928, official and public attention became focussed on the need to effect drastic improvements in some of the crowded areas of the old city and to provide for its expansion and for suburban developments. This led to the examination of the possibilities of the area lying between the old and new cities and of the desirability of driving connecting roads through the City walls in order to give access outwards in this direction. The old city is now rapidly expanding in a westerly direction, i.e., towards and up the Ridge, which runs behind both cities and up the Ridge, which runs behind both cities and the spaces between the two cities are being ment of a unitary, teaching and residential

direct thoroughfare from the midst of the new city through the old city wall to the middle of the old city has not been proceeded with and consequently the magnificent thoroughfare, name Parliament Street, which was constructed for the purpose in New Delhi remains in a truncated condition. The Delhi Municipal Committee late in 1933 declined to co-operate in a completion scheme, on the ground that it would result in changes in property values in the old city to the disadvantage of many owners. The Medical Officer of Heath of the old city in his latest reports gravely stresses the ill effects his latest reports gravely stresses the ill effects of its overcrowded state and in this he is borne out by the Municipality in its reports.

H. E. the Viceroy on 10th January 1930 laid the foundation stone of a large European and Indian General Hospital to be built in the course of the next few years at a cost of Rs. 75 lakhs for the service of both old and new cities. or the service of Doth old and new cities. This would provide 254 beds and the necessary laboratories and administrative and residential quarters. No progress has yet been made with the building work on which has for financial reasons been postponed.

All-India War Memorial.—H. R. H. the Duke of Connaught on 10th February, 1921, laid the foundation stone of an All-India War Memorial at the southern end of the Central Memorial at the southern end of the Central Vista. The place chosen is a fine position in the centre of the circular Princes' Park and the construction of the building was for economy's sake proceeded with slowly. The memorial was formally inaugurated by Lord Irwin in February, 1931.

The Memorial takes the form of a triumphant arch spanning Kingsway, the avenue running down the centre of the Vista. It is generally similar to the Arc de Triomphe in Paris but is simpler. The monument reaches a height of 180 feet and the inner height of the arch is 87 feet, 6 inches and its broadth 70 feet. Over the arch on both arch is 87 feet 6 inches and its breadth 70 feet. Over the arch on both fronts appears in capital letters the single word 1NDIA and this is flanked on each side by the initials MCM (i.e. 1900) whilst immediately below them on the left hand are the initials XIV (i.e., 14) and on the opposite side the figures XIX (i.e., 19). Above the Arch is a circular stone bowl 11½ teet in diameter. A column of moffensive chemical smoke ascends from this on ceremonial occasions and anniversaries and is illuminated by electric and anniversaries and is illuminated by electric light reflections after dark. The memorial bears the names of British and Indian officers and N.C.Os. and men according to an discription carried upon it and running.

Public Institutions.—It was proposed during 1914 that a higher college for Chiefs should be established at Delhi and in this connexion a conference of Chiefs and Political Public Institutions.--It was Officers was held at Delhi at which the Viceroy presided. The proposal is still "under consideration." To implement it would require an estimated capital outlay of Rs. 121 lakhs.

University of Delhi, the buildings for which would be erected in the new capital. The plan was to provide a local university on bian was to provide a local university on the model recommended for Dacca University by the Calcutta University Commission. The provision of funds for the complete realisation of the university must be a matter of time and it was, therefore, decided to commence work with the existing colleges in their present buildings and to permit them gradually to modify their organisation. The initial work of organisation was quickly effected by the Executive Council, Unfortunately the inability of the Government of India to allot considerable funds was a severe handicap. It was hoped that H. E. the Viceroy would be able to lay the foundationstone of the university buildings in November, 1922, but this proved impracticable. The general question of the finances of the University was in 1927 the subject of inquiry by a special Committee appointed by Government. For the time being the University was housed in the temporary buildings in old Delhi occupied by the Civil Secretarist until 1929 and in 1931 clid Viceregal Lodge was allocated to it for its future home. of the Government of India to allot considerable Lodge was allocated to it for its future home.

The new city was the scene of notable inauguration ceremonics in February, 1931. The first of these was the unveiling of four "Deminion Columns" suitably placed about the great place between the two Secretariat blocks. The columns are of red stone, sur-mounted each by a glided merchantman of the old style in full sail. The columns are designed to resemble the historic ones crected in various

parts of the land by Asoka and were presented by Canada, Australia, New Zealand and South Africa. The first two and fourth of these Africa. The first two and fourth of these Dominions sent their own representatives to perform the ceremony of unveiling. New Zealand nominated a Member of the Government of India to act in her behalf for the same purpose. The second great ceremony was the inauguration of the War Memorial. This was performed in State by His Excellency the Viceroy in the presence of representatives of every unit of the army in India of the Royal Air Force and of a large concourse of official and other spectators. There was a large popular fête on the ground lying below the old Fort and between it and the river Jumna Their Excellencies the Viceroy and Lady Irwin arranged a programme of festivities at The Viceroy's House. A New Delhi Municipal Committee with its own permaent official chairman mittee with its own permanent official Chairman and Secretariat was established in 1932.

City Extension -- The new city now, in the midst of its season, contains a population of approximately 70,000 the maximum number for which it was designed. Of the numerous Ruling Princes who more allotted sites for residence, very few have yet responded by building Otherwise the available residential building space is almost covered and the time has come to consider and plan extensions of the city. The main direction for this is southward where for some three miles beyond the limits of present development, Government have land in their possession and have placed it at the disposal of the City administration.

# Freemasonry in India.

In 1728 a dispensation was granted by the Admiral Watson and Clive, it is mprobable Grand Lodge of England to Geo. Pomfrett, Esq., that he resumed the duties of his masonic office authorising him to "open a new Lodge in Bengal" after the calamity that befell the settlement.

Of this personage nothing further is known but under Capt. Farwinter, who in the following year succeeded him as Provincial Grand Master of succeeded him as Provincial Grand Master of India, a Lodge was established in 1730, which in the Engraved Lists is distinguished by the arms of the East India Company, and is described as "No. 72 at Bengal in the East Indias." The next Provincial Grand Masters were James Dawson and Zech. Gee, who held office in 1740; after whom came the Hon. Roger Drake, appointed 10th April 1755. The last named was Governor of Calcutta at the time of the attack made on the

The minutes of the Grand Lodge inform us that The minutes of the Grand Longe minorm us came of William Mackett, Provincial Grand Master of Calcutta, was present at the meeting of that arms body, November 17th, 1760, and we learn on the same authority that at the request of the "Lodges in the East Indies" Mr. Cullin Smith was applianted by G. M. in 1789. At this period it was pointed P. G. M. in 1762. At this period it was the custom in Bengal "to elect the Provincial Grand Master annually by the majority of the votes of the members present, from amongst those who passed through the different offices of softlement by Surajah Dowlah in 1756. Drake missed the horrors of the Black Hole by escaping and was accused of deserting his post, but, though present at the retaking of Calcutta by

being thought an infringement of his prerogative. I there and also to grant a dispensation for holding In accordance with this practice, Samuel Middleton was elected (P. G. M. circa) in 1767; but in passing it may be briefly observed that a few years previously a kind of roving commission was granted by Earl Ferrars in 1762-64 to John Bluvitt, Commander of the "Admiral Watson," Indiaman "for East India where no other Provincial Lodge is to be found." Middleton's election was conis to be found." Middleton's election was con-firmed October 31st, 1768, and, as the dispensation forwarded by the Grand Secretary was looked apon as abrogating the practice of annual elec-tions, he accordingly beld the office of D. G. M. Unfortanately the records of the P. G. L. date back only to 1774, and thus much valuable in-formation is lost to us. This Grand Lodge continued working until 1792 when it ceased to meet. It seems that the officers were selected from mly two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatsfied bodies seceding and attaching themselver to the Athol of Ancient Grand Lodge. In 1813at the Union both the Ancients and Moderns in Calcutta combined and gave their allegiance to he United Grand Lodge of England and hav since been working peaceably under the Provincial Grand Lodge of Bengal which was revved in that year and in 1840 created a Disrict Grand Lodge.

fadras.—The earliest Lodge in Southern Iniia (No. 222) was established in Madras in 1752. Three others were also established about 1766. In the same year Capt. Edmund Pascal was appointed P. G. M. for Madras and its Dependencie and in the following year another Lodge was etablished at Fort St. George. In 1768 the Ahol (or Ancients) invaded this District and in 182 established a Provincial Grand Lodge and bth these Provincial Grand Rodies continued orking peaceably side by side until the Union. ndeed, though not generally known, these two Frand Bodies made an attempt at coalition long before any such movement was made by their parent bodies, the Grand Lodge of England, and the Ancient Grand Lodge, and Malden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1813 all the bodies in Madras gave their allegiance to the United Grand Lodge. One event worthy of note was the initiation in 1774 at Trichinopoly of the eldest son of the Nawab of Arcot, Umdat-ul-Umra, who in his reply to the congratulations of the Grand Lodge of England stated "he considered the title of English Mason as one of the most honourable that he possessed. This document is now stored in the archives of the United Grand Lodge.

Bombay.—Two Lodges were established in this Presidency during the 18th century, Nos. 234 at Bombay in 1758 and 569 in Surat in 1798, both of which were carried on the lists until the Union when they disappeared. A Provincial Grand Master, James Todd, was appointed but there is no record that he exercised his functions and his name drops out of the Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No. 322) to the 78th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Moria was

a Provincial Grand Lodge for the purpose of making the Hon. Mountstuart a Mason, he having expressed a wish to that effect. The Petitioners further requested "that his name might be inserted in the body of the warrant, authorising them to instal him after being duly passed and raised a Deputy Grand Master of the Deccan." Of the reply to this application no copy has been preserved. Lodge Benevolence was established in Bombay in 1822.

In 1823 a Military Lodge" Orion-in-the-West" was formed in the Bombay Artillery and installed at Poona as No. 15 of the Coast of Coromandel. It seems from Lane's records that in 1830 it was at seems from Lane's records that in 1850 it was discovered that this lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Decree and reseaf to the chay in the the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which however left no trace of its existence. In 1825 the civillan element of "Orlon" secoded and formed the "Lodge of Hope" also at Poona No. 802.

Here "Orion" unrecognized at home, aided in the secession of some of its members, who obtained a warrant, on the recommendation of the Parent Lodge, from the Grand Lodge of England.
Two years later it was discovered that no notification of the existence of "Orion-in-the-West" had reached England, nor had any fees been received, although these including quarterages had been paid into the Provincial Grand Lodge, Coast of Coromandel. It was further ascertained that in granting a warrant for a Bombay Lodge that in granting a warrant for a Bornoay Lodge the Provincial Grand Master of Coromandel had exceeded his powers. Ultimately a new warrant No. 598 was granted as already stated in 1833. Lodge "Perseverance" was started in Bombay No. 818 in 1828. Up to this time the jurisdiction of the Grand Lodge of England in India had not been invaded; but in 1836 Dr. india had not been invaded; but in 1836 Dr. James Burnes was appointed by the Grand Lodge of Scotland, P. G. M. of Western India and its Dependencies. No Provincial Grand Lodge however was formed until 1st January 1838. A second Scottish Province of Eastern India was started which on the retrement of the Marquis of Tweedale was absorbed within the jurisdiction of Dr. Burnes, who in 1846 became Provincial Grand Master for all India (including Aden) but with the proviso, that this appointment was not to act in restraint of any future sub-division of the Presidencies. Burnes may be best described as being in 1836, in ecclesiastical phrase as a Provincial Grand Master "in partibus infidelium" for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were propitious. There was no English Provincial Grand Lodge in Bombay and the Chevalier Burnes. whom nature had endowed with all the qualities requisite for Masonic Administration, soon got to work and presented such attractions to Scottish Freemasonry that the strange sight was witnessed of English Masons deserting their asked to constitute a Lodge to be known by the mother Lodges, to such an extent that these fell name of St. Andrew by eight Masons residing into abeyance, in order to give support to Lodges

newly constituted under the Grand Lodge of Scotland. In one case, indeed, a Lodge "Perseverance" under England went over bodily to Scotland, with its name, jewels, furniture, and belongings, and the charge was accepted by Scotland. This Lodge still exists in Bombay and now bears No. 338 on the Register of Scotland. From this period, therefore, Scotland Masonry flourished, and English Masonry declined until the year 1848 when a Lodge St. George No. 807 on the Rolls of the Grand Lodge of England was again formed at Rombay, and for some years was the Rolls of the Grand Lodge of England was again formed at Bombay, and for some years was the solitary representative of English Masonry in the Province. In 1844 Burns established a Lodge "Rising Star" at Bombay for the admission of Indian gentlemen the result of which is seen at the present day. Thus the seed planted at Trichinopoly in 1774 by the initiation of Umdat-ul-Umra has borne fruit, resulting in the initiation of thousands of Indian gentlemen of all castes and greatle and which has gone far. of all castes and creeds, and which has gone far to establishing that mutual trust between West and East, a distinguishing characteristic of Speculative Freemasonry. A Provincial Grand Lodge was re-established in Bombay in 1860, and converted into a District Grand Lodge in 1861.

The Grand Lodge of England.—All three Constitutions of the United Kingdom, the United Grand Lodge of England, the Grand Lodge of Ireland and the Grand Lodge of Scotland hold jurisdiction in India. By far the largest is the first the next largest is the third and the number of Lodges under Ireland is as yet small. The Grand Lodge of England divides its rule under Five District Grand Masters independent of each other and directly subordinate to the Grand Master of England by whom they are appointed.

### Bengal.

79 Lodges, Rt. Wor. Bro. Eric Studd, P.G.D., M.L.A., Dis. G. Master; Dy. D. G. M., Edward A. H. Blunt, C.I.E., O.B.E., I.C.S. P.G.D., Assist. D. G. M., F. W. Hockenhull, P.G.D.

### Burma.

20 Lodges. Rt. W. Bro. Dr. N. N. Parekh, P.G.D., District Grand Master, Jivanji Hormusji, C.I.E., I.S.O., P.A.G. Reg., Dy. D. G. M.

The Grand Lodge of Scotland exercises its rule through a Grand Master of all Scotland Exercises rule through a Grand Master of all Scotland Exercises rule to confirmation by the Brethren subject to confirmation by the Grand Master Mason of Scotland. Dr. Sir Temulji B. Nariman, Kt., is the present incumbent of the office, and controls 78 Lodges. Under him the several districts are in charge of the following Grand Superintendents:—

Lt.-Col. R. W. Castle, C. M. G., D. S. O., G. Supdt., Northern India.

G. Lindsay, G. Supdt., Central India. Morley Williams, Supdt., Southern India. W. G. McLean, G. Supdt., Eastern India. F. B. Ady—Burma.

The Grand Secretary is R.W. Bro. Khan Bhadur J. C. Mistree, J. P., 17, Murzban Road, Fort. Bombay.

The Grand Lodge of Ireland granted a warrant to establish a Lodge at Kurnal in 1837, but it was short lived. An attempt was nade in 1869 to establish a Lodge in Bombay, but on the representation of the Grand Secretar of England, to the Deputy Grand Secretay of Ireland that it would be objectionable to crate a third masonic jurisdiction in the Provice, there being two already, viz., English and Scotish, the Grand Lodge of Ireland declined to granthe warrant. In 1911, however, a warrant ras sanctioned for the establishment of Lodge 'St. Patrick" and since that year three other Lodes have sprung into being, one of which is nw defunct.

The Grand Lodge of Ireland has no Distrit Grand Master in India at present, the Lodge corresponding direct with the Grand Lodge a Dublin. There are eleven Lodges, 6 in Calcutta 3 in Ceylon and 3 in Bombay.

Royal Arch Masonry.—Under England the District Grand Master in any District is nearly always created also Grand Superintendent, who generally appoints his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The five English Districts are constituted as under ·--

# Scientific Surveys.

Zoological Survey of India.—It was established in 1916, when the Zoological and Anthropological Section of the Indian Museum was converted into a Survey on a basis similar pretend to the accuracy of modern maps of was converted into a Survey on a basis similar to that of the Geological and Botanical Surveys. The Indian Museum itself dates back to 1875, and at the outset the Zoological and Anthropological collections consisted almost entirely of material handed over by the Asiatic Society of Bengal, whose members had been accumulating systematic collections since 1814. Organised systematic collections since 1814. Organised zoological investigation in India has thus been in continuous progress for nearly 120 years. From the foundation of the Museum in 1875 to the time when the Zoological and Anthropological Section was established as a separate Survey, the Curator (or as he was subsequently termed the Superinten-dept) of the Indian Museum has been a zoologist. and among the officers who have held the appointment have been such well known members as

Anderson, Wood-Mason, Alcock and Annandale.
With the exception of the Director (Lieut.Colonel R. B. Seymour Sewell, I.M.S.) all the officers are Indian. The main functions of the Survey are to investigate the fauna of India and to arrange and preserve the section in the Zoological and Anthropological galleries of the Indian Museum. In addition the Survey issues two series of publications upon Zoological research, namely The Records and The Memoirs

of the Indian Museum.

Botanical Survey .- The Botanical Survey department of the Government of India is under the control of a Director who is also Superintendent of the Royal Botanic Garden, Calcutta. There is a staff at headquarters of two officers for systematic work and at the Indian Museum a curator who is engaged in the development and mainten-ance of the Industrial Section. The Director holds administrative charge of the Government of India's cinchona operations in Burma, of quinine manufacture in Bengal and of the distri-bution of cincho, a products to the Government of India's area of distribution in Upper India.

The existence of the Botanical Survey, like that of the Geological Survey, has both a cultural and an economic justification. On general grounds it is obvious that a progressive Government should acquaint itself with the physical fact of the area it administers, and although apart from the cinchona operations, the activities of the Survey cannot be said to have much immediate economic applicability—consisting as they do of investigations and researches into the systematics, physiology, ecology, and histology of plant life—the work accomplished in pure botany at the Royal Botanic Garden during the last

as the Royal Bottanic Garden Guring the last contury and a half has exercised a profound and far-reaching influence upon the development of Agricultural Science and Forestry in India.

Survey of India.—The first authoritative map of India was published by D'Anville in 1752, when the exploration of the then unknown India was still largely in French hard. India was still largely in French hands. had been compiled from routes of solitary

travellers and rough charts of the coast.

The Survey of India may be said to have been ounded in 1767—ten years after the battle of Plassey—when Lord Clive formally appointed Major James Rennel the first Survey or General of Bengal, at that time the most important of the East India Company's possessions, though there

India based on the rigid system of trangulation commenced at Madras in 1802 and sine extended over and beyond India. Even now, however, the relative accuracy of these old maps makes them valuable in legal disputes, as for hetance in proving that the holding of a Bengal landowner was a river area at the time of the lermanent Settlement of 1793, so that he is debared from its benefits.

From these beginnings, this department has gradually become primarily responsibe for all topographical surveys, explorations and the maintenance of geographical maps of the greater

part of Southern Asia, and also for geodeic work

Geodesy means the investigation of he size. shape and structure of the earth, and theeodetic work of the department conists of rimary (or geodetic) triangulation, latitude, logitude and gravity determinations. From the the exact "figure" of the earth is olained, exact "figure" of the earth is oblined, whereby points fixed by triangulation in be accurately located on its curved surface. This system of fixed points holds together altopographical and revenue surveys, and the extence of such a system from the early days ( the department has obviated the embarrassents caused in other countries where isolated pographical surveys have been started withe a rigid framework, with the inevitable resulthat they could not be fitted together.

A geodetic framework is, therefore, esscial in any large survey, but there are a numbiof other activities, all of them ultimately utilitian which can be suitably combined with its exition, and the following are some of these wih are carried out in India:

Precise levelling for the determinations heights;

Tidal predictions and publication of T<sub>1</sub>
Tables for forty-one ports between Suez a Singapore.

The Magnetic survey;

Observation of the direction and force

Astronomical observations to determin latitude, longitude and time;

Seismographic and meteorological observation at Dehra Dun.

Indian geodesy has disclosed by far the larges known anomalies of gravitational attraction in the earth's crust, which have recently led to a

consideration of the whole theory of isostasy.

Topographical Surveys.—In the past this department used to carry out the large scale revenue surveys for most of India, and was still conducting this work for Central and Eastern India and Burma in 1905.

Though revenue survey is primarily a record of individual property boundaries and is con-cerned with the surface features, ground levels and exact geographical position essential to a topographical survey, it was on the whole found economical to carry out both surveys together.

By 1905 however, all the Provinces had taken over the revenue surveys, for which they had always paid, and the Survey of India was enabled to concentrate its energies on a complete new series of modern topographical maps in were earlier settlements in Madras and Bombay. several colours on the 1-inch to 1-mile scale.

This new series had been rendered necessary by the natural demand for more detailed information to be shown on maps, especially as regards the portrayal of hill features by contours, proper classification of communications and—more recently—air traffic requirements.

It was intended that this 1905 survey should be completed in twenty-five years, and then revised periodically every thirty years. Owing however to the war and more recent retrenchments only two-thirds of the programme had been completed by 1932, in spite of a reduction of scale for the

less important areas.

Although new surveys covering from thirty to sixty thousand square miles—an area comparable to that of kingland—are carried out every year, the maps of a large part of the country are still over 50 years old, printed mostly in black only, and have hill teatures shewn by roughly sketched form lines or hachures; such changes in town sites, canals and communications as have been embodied in them have not been surveyed on the ground but entered from outside information.

Owing to the serious financial situation in 1931, the establishment of the department was severely cut down and its annual expenditure halved, in consequence of which the modern survey of India cannot now be completed before 1950.

The obsolescence of the present series of modern maps of India is shewn in the second

index map at the end of this report.

Large Scale Surreys .- Surveys and records of international, state and provincial boundaries have always formed an important item of topographical work, and in recent years numerous Guide Maps have been published of important cities and military stations where the 1-inch to 1-mile scale is madequate.

Muscellaneous - While expending on topographical and geodetic work all funds allotted by Imperial Revenues, the department is prepared to undertake or aid local surveys, on payment by those concerned, such as

Forest and cantonment surveys;

Riverin, irrigation, railway and city surveys, Surveys of tea gardens and mining areas, with such control levelling as is necessary for these operations.

Administrative assistance is also given, and executive officers, lent in aid of the revenue surveys of various Provinces and States.

The Printing Offices at Calcutta and Dehra Dun also carry out work for other Government departments, such as special maps, illustrations

for Reports and all diagrams for patents.

The Mathematical Instrument Office of this department assists all Government departments, as well as non-officials, by maintaining a high standard of instrumental and optical equipment and by manufacturing and repairing instruments which would otherwise have to be imported from abroad.

Military Requirements and Air Survey .- The department is also responsible for all survey operations required by the army, and is in a position to meet the rapidly increasing complexity of modern military requirements, especially in air survey.

In view of its high military importance, air

taken from the ground are being studied experimentally.

The flying and photography for air mapping done by this department are at present carried out by the Royal Air Force or the Indian Air Survey Company, a commercial firm with headquarters at Dum Dum.

Administration is by the Surveyor General under the Education, Health and Lands Depart-

ment of the Government of India.

The Headquarters Office is at Calcutta under the Assistant Surveyor General, and there are four Directors, one for the Map Publication and other technical offices at Calcutta, and three for three of the five Survey of India Circles into which the country is divided; the other two Circle areas (covering Burma and South India) are administered personally by the Surveyor General.

Of the three Circle Directors, one also administers the Geodetic Branch at Dehra Dun in addition to his topographical survey Circle.

Any enquiries regarding surveys, maps or publications may be addressed either to the Headquarters Office or to the Survey Director or Independent Party concerned, whose addresses are Director, Map Publication, Calcutta; Director, Geodetic Branch, Dehra Dun, Director, Frontier Circle, Simla, Director, Eastern Circle, Shillong; Officer in charge, No 6 (South India) Party, Bangalore; and Officer-in-Charge, No. 10 (Burma) Party, Maymyo.

Indian Science Congress.—The Indian Science Congress was founded largely owing to the efforts of Prof. P. S. Macmahon and Dr. J. L. Simonsen. These two gentlemen worked jointly as Honorary General Secretaries of the Congress. till 1921. The Asiatic Society of Bengal undertakes the management of the Congressinances and publishes annually the proceedings of the Congress. The objects are (1) to encourage research and to make the results generally known among science workers in India, (2) to give opportunities for personal intercourse and scientific companionship and thus to overcome to some extent one of the chief drawbacks in the life of workers in science in India, (3) to promote public interest in science; for this end the Congress is held at different centres annually, and evening lectures open to the public form an important part of the proceedings of each Congress.

The Congress, which is progressive and vigorous, meets in January each year, the proceedings last for six days. The Head of the Local Government is Patron of the Congress; the Congress session is opened by a Presidential Address delivered by the President for the year. The President is chosen annually, the year. The President is chosen annually, the different sections being represented in turn. The sections are (1) Agriculture, (2) Physics and Mathematics, (3) Chemistry and Applied Rotany, (4) Zoology and Ethnography, (5) Botany, (6) Geology, (7) Medical Research; when the sections meet separately each section is presided over by its own President also chosen annually. The mornings are devoted to the reading and discussion of the papers, the afternoons to social functions and visits to places of interests, in the evenings public to places of interests, in the evenings public lectures are delivered.

The Indian Research Fund Association.— This Association, which is a much older body than the National Research Council in England, survey work for civil purposes is receiving all This Association, which is a much older body possible encouragement and assistance, and the than the National Research Council in England, latest methods of mapping from photographs was constituted in 1911 with a sum of rupees

five lakhs (£33,000) set aside as an endowment for the prosecution and assistance of research, the propagation of knowledge and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases. It can claim to be amongst the pioneers in organised medical research on a large scale and has been referred to by other countries in very complimentary language. Still better, it has been copied by

several other nations.

During 1929 the constitution of the Governing Body was altered by the Government of India. It was considered that, in view of the largely increased activities of this Association, the Governing Body, which had hitherto most expeditiously and economically conducted the business of the Association should be now made more representative in character. It was accordingly enlarged by including two non-official members from the Legislative Assembly, one from the Council of State, two from the Medical Faculties of the Universities and one non-medical scientist. The creation of a Recruitment Board in India for selecting the personnel employed by the Association and of a Consulta-tive Recruitment Board in England also came under the consideration of Government. It was further decided that the Governing Body of the Indian Research Fund Association should be the Indian Research Fund Association should be the co-ordinating agency for the research activities of the All-India Institute of Public Health which is being built at Calcutta and of the proposed Central Medical Research Institute. The Conference of Medical Research Workers is drawn from all parts of India and consists of experts in their particular lines of research discussed vasn'ty the general rolley.

of research, discussed yearly the general policy of research work in India as well as the detailed schemes which are proposed to be undertaken by the Indian Research Fund Association in the following year. The results of these discussions are available to guide the members of the Scientific Advisory Poard of the Indian Research Fund Association in making their recommenda-tions for the programme of the following year. The Advisory Board also met in December and examined all the proposals for research work and recommended a scheme of research for the guidance of the Governing Body of the Indian Research Fund Association.

The official organ of the Association is the "Indian Journal of Medical Research," which has a wide international circulation. The Association also publishes "Indian Medical Research Memoirs," which are supplementary to the "Journal"

Since its inception a great number of inquiries have been carried out under the auspices of the Association and great expansion of its activities has taken place from small beginnings.

The principal inquiries are the Malaria Survey of India, which is a Central organisation, located at Kasauli and Karnal, plague research at the Haffkine Institute, Bombay, kala-szar by a commission in Assam, bacteriophage by Dr. Asheshov at Patna, nutritional research by Colonel McCarrison at the Pasteur Institute,

activities of this organisation and in commemoration of Sir Ronald Ross' intimate association with India, an experimental malaria station was opened in Karnal in January 1927 and is known as The Ross Field Experimental Station for Malaria. Besides carrying out experiments in connection with the prevention of malaria, annual classes are held at which candidates from all over India are shown the latest methods for dealing with the malaria scourge and are instructed how these methods should be applied. In connection with the Malaria Survey of India and in order to assemble all facts relating to malaria, a new publication has been started known as the "Records of the Malaria Survey of India," of which up-to-date four number have been issued.

The programme for each year involves an expenditure of Rs.10 lakks or more and the institution of 40 or 50 investigations.

Geological Survey.—The ultimate aim of the Geological Survey of India is the preparation of a geological map of India upon the accuracy of which the solution of most geological problems ultimately depends. Maps accompany the reports on the various areas in the publications of the Department and a large amount of information is made available to the public. Such maps represent pioneer work which enables prospectors and mining engineers to cut short their preliminary investigations and to start where the Geological Survey has left off. During the preparation of the geological map and the general survey of the country, mineral deposits of importance are sometimes discovered. Such discoveries are published without delay and every endeavouris made to induce private firms to take up the exploitation of the mineral discovered. Collections of minerals, rocks and cossils are accumulated and exhibited in the public galleries of the Indian Museum, situated in Calcutta. Some of the most interesting and scientifically valuable additions to the collections in recent years have been the remains of anthropoid apes of great age discovered at different places in the Siwalik Hills, a range which for hundreds of miles runs parallel to the Himalayas, at a short distance below the foot hills of the latter, and is largely composed of Himalayan detritus. The Geological Survey helps in the spread of geological education in India by the presentation of mineral, rock and fossil specimens to educational institutions. The knowledge gained concerning the geological structure of India and the composition of the rocks that compose the strata enables the department to help in the solution of engineer-ing problems connected with the selection of sites for dams for reservoirs, the safety of hill slopes and the suitability of particular building stones for particular purposes. The Department is also often able to advise on problems concern-ed with the supply of water. As a result of the knowledge gained concerning the structure and disposition of the mineral deposits of India, the Department is also in a position to give advice concerning the conservation of the mineral resources of the country. The Geological Comoor, and indigenous drugs and drug addiction by Lt.-Col. Chopra at Calcutta.

The Malaria Survey of India, which now colors international recognition, is constantly called upon to advise as to the best methods for Memoirs, Records and Palsontologia Indica, malaria prevention in India. As part of the

# Posts and Telegraphs.

### POST OFFICE.

The control of the Posts and Director-General of Post and Offices of India is vested in an officer designated Director-General of Posts and Telegraphs whose office is attached to the Department of India. For the efficient working of the Department of India. For the efficient working of the Department a representative of the Finance Deptt.—the Financial Adviser. Posts and Telegraphs—them. When the duties of the Postmaster ments representative of the Financial Adviser, Posts and Telegraphs—them. When the duties of the Postmaster or a head office become so onerous that he is Financial Adviser, Posts and Telegraphs—them. When the duties of the Postmaster was the point of the Postmaster or a head office become so onerous that he is Financial Adviser, Posts and Telegraphs—the Financial Adviser porters of the post of them and if a till further relief is required. & T. The Financial Adviser not only controls the finances of the Dept, but also assists the

Assit. Deputy Director-General.

Assit. Deputy Director-General.

For postal purposes, the Indian Empire is divided into nine circles namely, Bengal and Assam, Bihar and Orissa, Bombay, Burma, Central, Madras, Punjab and North-West Frontier, United Provinces and Sind and Baluchistan. Each of the first eight is in charge of a Postmaster-General and the Sind and Baluchistan Circle is controlled by a holders or outlivators who perform their postal indices of cultivators who perform their postal interest of the Post Office is entrust-

The Postmasters-General are responsible to the Director-General for the whole of the postal arrangements in their respective circles, including those connected with the conveyance of mails by railways and inland steamers. All the Posta masters-General are provided with Deputy and Assistant Postmasters-General. The nine Postal Circles are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors.

of them, and if still further relief is required, one or more Assistant Postmasters are employed. the finances of the Dept, but also assists the D. .. lanna. that weight Samples.—11 annas for first 4 ounces and 2 anna per 2 ounces thereafter.

Parcels.

Parcel postage varies for different countries as shown in the Foreign Post Directory included in the Post and Telegraph Guide. Information relating to the rates of postage on parcels for Great Britain and Northern Ireland is given

(1) Parcels not exceeding 20 lbs. in weight and addressed to Great Britain and Northern 1reland are forwarded as mails to the British Post Office. the rates of postage applicable to such parcels being as follows:—

Gibralcar. land.

For a parcel-Rs.a.p. Rs.a.p. 

These parcels are delivered by the post office and the postage paid carries them to destination

(ii) Parcels which exceed 11 lbs, but which do not exceed 50 lbs. (the maxi-mum allowed) in weight are forwarded from India through the medium of the P. & O.S.N.Co., and are delivered at destination under arrangements made by that Company. The postage charge applicable to such parcels is twelve annas for each pound, or fraction of a pound. The parcels are delivered free of from the Company's Head Office in London; if addressed to any place beyond that radius, carrier's charges are levied from the addresses on delivery. Parcels thus forwarded through the P. & O. S. N. Co. cannot be insured during transit beyond India, but must, if they contain coin, etc., be insured during transit en India. No acknowledgment of delivery can be obtained in respect of these parcels, nor can such parcels be transmitted to Great Britain and Northern Ireland under the value-payable system.

#### Limits of Weight.

Letters.—4 lbs. 6 oz.

Printed Papers and Business Papers.—To
Great Britain and Northern Ireland, and the
Irish Free State, British Australasian Colonies,
Hong-kong, the Straits Settlements, Togo (British), the Union of South Africa, Rhodesia, and
the Bechuanaland Protectorate—5 lbs.

To Ceylon-No limit,

To all other destinations-4 lbs, 6 oz.

Samples—To Great Britain and Northern Ireland, and the Irish Free State, Hong-kong, the Straits Settlements, Togo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate-5 lbs.

To Ceylon-200 tolas.

To all other destinations-1 lb. 2 oz.

Parcels.-11 lbs. or 20 lbs.

#### Limits of Size.

Letters-35 inches in length, breadth and thickness taken together and 231 inches in any one direction. If in form of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction.

Printed Papers and Business Papers—To Ceylon—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions are 30 inches in length and 4 inches in diameter.

To all other destinations-35 mches in length. breadth and thickness taken together and 234 inches in any one direction. If in form of roll. 39 inches in length plus twice the diameter and 31 inches in any one direction.

Samples.-To Great Britain and Northern Samples.—To Great Britain and Northern Ireland, and the Irish Free State, Ceylon, Hongkong, the Straits Settlements, the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions are 11 feet in length and 6 inches in diameter.

To all other destination-35 inches in length, breadth and thickness taken together and 234 melies in any one direction. If in torm of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction.

Money Orders .- To countries on which money orders have to be drawn in rupee currency, the rates of commission are as follows:—

Rs. a On any sum not exceeding Rs. 10 ... On any sum exceeding Rs. 10 but not 0 3 exceeding Rs. 25.. On any sum exceeding Rs. 25 for each complete sum of Rs. 25 and 6 annas for the remainder, provided that, if the remainder does not exceed Rs. 10, the charge for it shall be only 3 annas.

To countries on which money orders have to be drawn in sterling, the rates are as follows :--

.. o On any sum not exceeding £1 exceeding £1 but not exceeding ,, £2 £3 £.9. 0 10 £3 £4 0 18 ,, £4 £5 1 0 ,, ,, ,, •• £5

for each complete sum of £5 and 1 rupee for the remainder, provided that if the remainder does not exceed £1, the charge for it shall be 4 annas; if it does not exceed £2, the charge shall be 7 annas; if it does not exceed £3, the charge shall be 10 annas; and if it does not exceed £4. the charge shall be 13 annas.

Magnitude of business in Post Office.— At the close of 1933-34 there were 106,200 postel officials, 23,700 post offices, and 167,200 miles of mail lines. During the year, 1,100 miles of mail lines. During the year, 1,100 million articles, including 41 million registered articles were posted; stamps worth Rs. 62.5 millions were sold for postal purposes over 37.5 million money orders of the total value of Rs. 754 millions were issued, a sum of Rs. 185.6 millions was collected for tradesmen and others on V. P. articles; about 3.5 million insured articles on V. P. articles; about 3.5 million insured articles valued at 1,031 millions of rupees were handled. Customs duty, aggregating about 7.9 million rupees was realised on parcels and letters from abroad, pensions amounting to Rs. 16.7 millions were paid to Indian Military pensioners and 17,000 lbs. of quinine were sold to the public. On the 31st March 1934, there were 3,000,000 Savings Bank accounts with a total balance of Rs. 522.3 millions and 87,000 Postal Life Insurance policles with an aggregate assurance of Rs. 165.2 millions.

#### TELEGRAPH DEPARTMENT.

Telegraphs.—Up to 1912 the telegraph system in India was administered as a separate department by an officer designated Director-General of Telegraphs who worked in subordina-tion to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgama-tion of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced amagamation of the two services was introduced in the Bombay and Central Circles from the 1st July 1912. The fundamental principles of this acheme which folk wed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former of work in each Circle being transferred to the Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs. Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced from 1st April.
The superior staff of the Direction, in addition to the Director-General himself, consists on the to the Director-General himself, consists on the singlineering side of a Chief Engineer. Telegraphs, with one Personal Assistant. For traffic work there is a Deputy Director-General, with two Assistant officers. In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India was divided up into five Circles, each in charge of a Director. For Burma special expensive were considered necessary and the Each additional arrangements were considered necessary and the Each additional word over 8

engineering work is in charge of the Postmaster General who is a Telegraph officer specially selected for the purpose. These six Circles were divided into twenty-one Divisions each of which is in charge of a Divisional Engineer. On the 1st July 1922 Sind and Baluchistan circle was formed with its headquarters at Karachi. This circle is in charge of a Director of Posts and Telegraphs. On the 31st March 1924 there were 7 Circles and 20 Divisions. With a view to complete fusion of the three branches of work on the lines of the Burma Circle, the en-gineering work of the Bombay and Central Circles was brought under the control of the respective Postmaster General in 1925 and this unification proved an unqualified success and was gradually extended to other circles. The fusion was com-pleted in March 1930. The telegraph traffic and the engineering branches in the circles are now controlled by the Postmasters-General.

There is also a Wireless Branch attached to the Director General's office, which is in ad-ministrative control of all wireless work in the Department. The Director of Wireless is in charge of this branch and is assisted by two officers.

The audit work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs, assisted by a staff of Deputy and Assistant Accountants-General.

Inland Telegrams and Tariff.—Telegrams sent to or received from places in India or Ceylon are classed as Inland telegrams. The tariff for inland telegrams is as follows:-

> For delivery in India. Private and State. Express. Ordinary.

Letter Telegrams-

Minimum charge for 25 words.

Ordinary rate telegrams may be written in Code.

Telegrams are accepted at all Government Telegraph Offices.

Usual rules apply regarding Registration Reply Paid, etc.

Full lists published in Posts and Telegraphs

Radio-Telegrams.—For radio-telegrams addressed to ships at sea from offices in India or Burma and transmitted via the coast stations at Bombay, Calcutta, Karachi, Madras, Port Blair or Rangoon the charge is thirteen annas per word (ordinary) or eight annas per word (code) in nearly all cases.

The following are the charges (excluding supplementary charges) for radio-telegrams from Offices in India or Burma transmitted to ships at sea through the coast stations mentioned in the preceding paragraph:—

> Total charge per word. Ordinary. Code. Rs. a. Rs. a.

(1) All Government or Private Radio-telegrams, cepting those mentioned

0 13 0 8 in (2) to (4) below

(2) Radio-telegrams Britannic Majesty's Ships of War or Ships of the Royal Indian Navy

(3) Radio-telegrams to Spanish 0 12 0 71 or Swedish ships

The sender of a radio-telegram may prepay a reply. He must insert before the address, the instruction "R. P." followed by mention in Rupees and annas of the amount prepaid, e.g., R.P. 7-8. This expression counts as one

#### DAILY LETTER-TELEGRAMS.

Daily Letter-Telegrams in plain language, which are dealt with telegraphically throughwhich are dealt with telegraphically unroughed accepted on any day of the week, and are ordinarly delivered to the addressee on the morning of the second day following the day of booking. They are subject to the conditions prescribed for Deferred Foreign telegrams with certain exceptions as stated below.

The charge for a Daily Letter-Telegram is ordinarily one-third of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 25 words at such reduced rate including the indication DLT.

The late fee system does not apply to Daily Letter-Telegrams and such telegrams are not accepted during the closed hours of an office.

On Indian lines Daily Letter-Telegrams are transmitted after Deferred Foreign telegrams.

stante, Telegraph restante and telegraph re-direction under orders of the addressee.

Growth of Telegraphs.—At the end of 1897-98 there were 50,305 miles of line and 155,088 miles of wire and cable, as compared with 107,216 miles of line including cable and 593,555 miles of wire including conductors respectively, on the 31st March 1934. The numbers of departmental telegraph offices were 257 and 104 (including 19 Radio offices), respectively, while the number of telegraph offices worked by the Post Office rose from 1,634 to 4276.

The increase in the number of paid telegrams dealt with is shown by the following figures :-

		5 754 A15	15,558,298
Press	••	5,278	82,068
Foreign State		9,896	
? Private		785,679	2,189,052
€ Press	• •	35,910	
Inland State		860,382	803,320
f Private			11,788 787
		1897-98.	1933-34.

The outturn of the workshops during 1933-34 represented a total value of Rs. 10,56,800.

Wireless.-The total number of departmental wireless stations open at the end of 1932-33 was thrity-one, vz., Akyab, Allahabad, Bassein, Bombay, Calcutta (two stations), Cheduba, Chittagong, Delhi, Diamond Island, Jodhpur, Jutogh, Karachi (two stations), Lahore, Madras (3 stations), Nagpur, Peshawar, Poona, Port Blair, Quetta, Rangoon (4 stations), Sandheads (two pilot-vessels), Sandoway and Victoria Point, of which only Cheduba, Port Blair and Victoria Point bocked telegrams direct from the public.

Seven of these stations were designated coast stations for communication with ships at sea and cleven worked as aeronautical stations in connection with regular air services.

The Duplex high-speed service between Rangoon and Madras continued to work satisfactorily, the wheatstone system being employed generally for this circuit.

Telephones.—On the 31st March 1934 the number of telephone exchanges established by the Department was 330 with 19,414 straight line connections and 3,390 extension telephones. Of these exchanges, 173 were worked departmentally. The number of telephone exchanges established by Telephone Companies was 25 with 37,400 connections.

The total staff employed on telegraphs, telephones and wireless on the 31st March 1934 was 13,197.

Posts and Telegraphs.—The capital outlay of the Indian Posts and Telegraphs Department during and to the end of the year 1938-34 was Rs. 10,12,000 and Rs. 16,77,46,000 respectively. The receipts for the year ended 31st March 1934 amounted to Rs. 10,72,62,000 and transmitted after Deferred Foreign telegrams.

The only special services admitted in daily to Rs. 11,24,55,000, the result being a net loss letter telegrams are Reply paid, Poste Re- of Rs. 51,93,000.

# Sanitation.

The history of the sanitary departments in ( India goes back for about sixty years. During that period great improvements have been effected in the sanitary condition of the towns, though much remains to be done; but the progress of rural sanitation which invoives the health of the great bulk of the population has been slow, and incommensurate with the thought and labour bestowed on the subject. "The reason lies in the apathy of the people and the tenacity with which they cling to domestic customs injurious to health. While the inhabitants of the plains of India are on the whole distinguished for personal cleanliness, the sense of public cleanliness has ever been wanting. Great improvements have been effected in many places; but the village house is still often many places; but the village nouse is suil often ill-ventilated and over-populated: the village site dirty, crowded with cattle, choked with rank vegetation, and poisoned by stagnant pools; and the village tanks polluted, and used indiscriminately for bathing, cooking and drinking. That the way to improvement lies through the education of the people has always been recognised "

Of recent years the pace has been speeded up as education progressed, education developed, and funds were available. In a resolution ed, and fuldes were available. In a resolution issued in May 23rd, 1914, the Government of India summarised the position at that time, and laid down the general lines of advance. This resolution (Gazette of India, May 25th, 1914) should be studied by all who wish to understand the attitude of the Government of India towards sanitation prior to the passing of the Reform Act of 1919. It will be found summarised in the Indian Year Book of 1922 (page 475 et seq.) and earlier editions. One of the greatest changes effected by the Reform Act of 1919 was the transfer of sanitation to the provinces making it a subject directly responsi-ble to local control through Ministers. It is yet too early to attempt to indicate the effects of this change.

The Public Health Commissioner with the Government of India in a general review of health organisation in British India which he laid in January, 1928, before the Interchange Study Tour organised for Medical Officers of Health from the Far Eastern Countries by the Health Organisation of the League of Nations, concluded "that the State effort in regard to Health Organisation in British India is one of no mean importance, that it has evolved over a couple of centuries during which many mistakes in policy must be admitted, that it has provided the Officers and the stimulus necessary for laying the foundations of medical edu-cation, that it has tried to uphold the ethical standards of western medicine and that in whichever way it is regarded it is an effort of which no Government need be ashamed." He quoted, the remark of the Government of India in their Resolution of 1914, that "in the land of the ox cart one must not expect the pace of the motor car." of the Constitutional Reforms now in progress.

The Public Health Commissioner in his annual report for the year 1925 noted the introduction of the political element into health matters as a result of the Reforms and said that the improvements being introduced before the Reforms were in some provinces now in a fairway to maturing but that in other provinces "with less appreciation of the actual needs so far from adding to the organisation as they have found it have shown a desire to scrap even some of what they originally possessed." But, he says, "though the picture is neither bright nor the future rosy, it is becoming increasingly evident that a considerable section of the Indian community is thinking seriously on these public health problems: amid much futile and destructive criticisms of State and municipal efforts here and there valuable and suggestive criticism can be met with which goes to prove my contention.

India's birth rate in 1925 was nearly twice that of England and Wales, her death rate was twice that of England and Wales and nearly three times that of New Zealand and her infantille mortality rate was nearly 2½ times that of England and Wales and nearly 4½ times that of New Zealand. "The information furnished for the great group of infectious diseases of world import, i.e., plague, cholera, small-pox, yeilow import, i.e., plague, choiera, smail-pox, yenow fever, typhus, malaria, and dysentery shows (says the Public Health Report already cited) that if we except typhus and yellow fever, India is one of the world's reservoirs of infec-tion for the others and the main reservoir of infection for plague and cholera." The signifleance of these facts must, adds the Commissioner, be obvious to all who think: "Briefly their implication is that India's house, from the public health point of view, is sadly out of order and that this disorder requires to be attended to. It is not for India to say that so far as she is concerned prevention is impossible. If we think of the effect of sunlight on tubercle ridden children; of the effect of feeding on rickets, scurvy and beri-beri; of the way in which malaria, cholera, yellow fever, dengue, ankylostomiasis and filariasis can be and have been overcome we need have no fear in regard to India provided the necessary measures are put into operation."

The Public Health Commissioner in an address before the annual congress of the Far Eastern Association of Tropical Medicine, held in Cal-cutta in December, 1927, urged the impor-ance of instituting a Central Ministry of Health which should be charged with the functions of co-ordinating the policies and activities of the departments concerned in the several of the departments concerned in the several provinces and with keeping them abreast of scientific progress. There is at present no public Health Act for the whole of India, nor under existing administrative arrangements is one immediately possible, but the desirability of the Central Ministry of Health and of such an Act is likely to be urged in the course of the revision The Commissioner in his annual report to Government for 1927 gave at the outset follows:—
the following text for thought "Whether the institution of a Ministry of Health, which many of us think is long overdue for the Indian Empire, would accelerate progress is a matter of opinion; but there can be little doubt that such progress must depend not on a happhagard proprogress must depend not on a haphazard programme or on the fulfilment of an annual routine of measures sanctified by tradition but rather on the acceptance of such cardinal principles as have been laid down by the Chief Medical Officer of the British Ministry of Health in his 1927 report and by a genuine attempt to work to these. Sir George Newman points out that "Nothing is more certain than the fact that the physical advancement and health of mankind is dependant not upon a doctor's stunt here or a sanitary institution there but upon the whole social evolution of the people. Now, these desired ends are not reached merely by announdesired ends are not reached morely by announcing them, attil less by leaving things to chance, drift or fate. They can in any case only be partly reached at all without foresight, organisation and expenditure. He proceeds to inculcate it is for consideration how far we in India are now working to these basic principles or are likely to in the future and whether our existing built organisation is best suited to four basic principles which it is necessary for

- (b) the establishing of a definite standard to work to, which should be based on health and physiology and not on disease or pestilence;
- (c) the study of the character and incidence of disease, its causes and predisposing conditions. its mode of spread, its social factors which increase or reduce it and the means of its treatment and prevention:
- (d) the establishment of a national organisation by the assent of public opinion, such organisation being an index of the aspirations and enlightenment of the people.

The following table of vital statistics is taken from the Public Health Commissioner's latest annual report :--

			Birth Rates	(per mille).	Death Rates (per mille).

Statistical health reports for all India are always inevitably submitted are belated owing to the number of provinces from which returns have to be collated.

recently published annual report, which concerns the year 1932, brings to notice certain leading facts. He shows that life-births registered during the year 1932 numbered 9.054,506 (4,702,913 males and 4,351,593 females or 81,384 less than the figure for 1931. Registered deaths numbered 5,805,666 (males 3,039,159 and females 2,766,507) as compared with 6,616,099 in 1931. 1,527,432 deaths or 26 per cent, of the total infantile occurred during the first year of life against 1.633,476 or 25 per cent. in 1931. Compared with 1931 the rate of 168.7 for British India was lower by 10 p in.

The Public Health Commissioner, dealing specially with the high rate of infantile mortality. mentions that statistics of the causes of these early deaths are not recorded but says that it is generally known that premature birth, infantile debility, bowel disorders, convulsions, malnutrition, diarrhoea and enteritis, respiratory diseases,inanition, smallpox, fevers and marasmus are the main causative features

Dr. Ruth Young, Director of the Maternity and Child Welfare Bureau of the Indian Red Cross Society, in some notes contributed to the Public Health Commissioner's report on this subject, says that "Various attempts recently made to ascertain more accurately the exact cause of maternal deaths have shown that mortality in connection with childbirth is very high and that the problem of deaths is even greater than had been supposed. The lower rate reported tor rural areas is probably due to faulty resistration, because the facilities for skilled attendance must obviously be lower in the average village even although the general standard of health may be higher. As in the case of infant mortality the general causes of this high rate are known, although further investigations in particular localities are required, e.g. into the prevalence of anemia of pregnancy and its influence on maternal mortality and the occurrence of diseases such as osteomalacia and eclampsia which complicate labour in certain parts of India. Apart from such definite entities which might be susceptible of rapid improvement the main causes of maternal mortality lie in social customs which cannot be quickly influenced. Any reform which has as its modus operands in educational process is bound to operate only gradually .... It can undoubtedly be hastened and in particular

The Public Health Commissioner in his most | by the provision of safe attendance at childbirth, That means trained midwives and dais in far greater numbers than are at present available. On the other hand, there is undoubtedly a greater appreciation of clean midwifery on the part of the general public. It would be a tragedy if this appreciation were not met by increased facilities in the shape of competent midwives. The teaching of illiterate women is a tedious business, yet the numbers of even partially educated women who are ready to become midwives is still very small and the ancient prejudice against work which is regarded as "unclean" still lingers ..... Ante-natal work which is such a powerful factor reducing maternal mortality is certainly on the increase. A greater number of women's hospitals are taking up this work and health visitors are playing their part. The attendance at antenatal climes is better than formerly and the public is beginning to understand the need for careful examinations.

> "Within a short space of time, measurable probably in months, the constitutional reforms now under discussion will have been brought into force. And the public health problems with which the new Central Government will be faced are such as will demand urgent attention. It is difficult to understand how the present central health organisation could undertake the additional work which these problems must entail. More than one witness who appeared before the Parliamentary Joint Select Committee stated that a Ministry of Health was an essential feature of the tuture Government of India but this proposal, while it has received warm support from more than one experienced authority, still remains a mere hope for the future. Apart from central direction of policy which a well-organised Ministry of Health would be capable of planning one of the most important requirements of this country is an All-India Public Health Act which will lay down the broad principles on which all public health developments should be based. Unfortunately the financial position has never forbidden the creation of the Central Board of Health which was suggested by the Simon Com. mission and which had been planned by the present Member in charge of Public Health as a first stage in effecting closer co-ordination between individual provinces in matters of public health. These and other developments must, it seems, await happier and more prosperous days,"

#### THE HEALTH OF THE ARMY.

# General Health statistics of the British Army in India during the year 1932.

1929	Strength.	Admissions.		Deaths.		Invalids sent Home.		Invalids Discharged in India.		Invalids finally discharged in United Kingdom.		Average Constantly sick.

Among officers of the British Army in India | 463.2 per thousand of strength were admitted or 7.39 per thousand of the strength, compared to hospital during the year compared with 420.4 in 1931. There were 15 deaths, giving a ratio of 6 54 per thousand, compared with 18 and 7.76 in 1931. The average constantly sick in hospital was 38.75 or 16.88 per thousand of strength as compared with 15.11 in the preceding year. The total constantly sick, in hospital are with fewerth as compared with 15.11 in the preceding year. hospital or out of hospital, on account of disease and injury was 27 94 per thousand.

Of British soldiers 32,177, or 581.5 per thousand were admitted to hospital compared with 647 per thousand in 1931 and 580.5 per thousand in 1913. There were 1,646 soldier deaths or 2.96 per thousand of the strength compared with 2.76 per thousand in 1931. The most important causes of mortality among soldiers were :--

Local injuries	• •		• •		27
Pneumonia			• •		27
Enteric group of	fevers				14
Heat stroke		• •	• •		12
Appendicitis		• •	• •	• •	11
Heat exhaustion		••	• •	• •	6

The number, sent home as invalids was 409 with 544 or 9.74 per thousand in 1981.

Among women and children (British Other Ranks) 1,262 women or 292 3 per thousand of the strength were admitted to hospital compared with 1,395 or 334 4 per thousand in 1931. Of the children, 1,999 or 299 1 per thousand of the strength were admitted to hospital, compared with 1,896 or 286.4 in 1931.

The principal cause of sickness among British troops was malaria of which there were. 4,654 cases, a decrease of 1,628 compared with 1931. The year's report by the medical authorities remarks, "In 1932, in India, the British troops lost about 32,568 days spent in hospital on account of malaria alone—a matter of serious economic importance to the State. The hard fact is that we know well how to deal with the malaria problem; but we have not the funds with which to put our knowledge to adequate practical use.''

Includes Reservists, Indian Territorial Force, Royal Indian Marine, Indian State Forces R. A. F., Civilians and Pensioners.

The admission rate of officers sick in hospital | thousand in 1931. There was thus a decrease for 1932 was 321.8 per thousand of strength as of 21.5 per thousand on the 1931 figures. The compared with 367.4 in 1931. Among soldiers death rate among Indian soldiers during 1932 52,017 or 429.8 per thousand of strength were, was 2.52 per thousand as against 2.96 per admitted to hospital, compared with 451.3 per | thousand in 1931.

#### LEPROSY IN INDIA.

It is exceedingly difficult to give anything approaching an accurate estimate of the total number of lepers in the Indian Empire to-day. In 1921, when a Ceusus was made, leprosy was regarded as an infirmity like blindness, insanity and deaf-mutism and the supposed number of lepers was tabulated along with these. The number counted was 102,513 as against 109,094 in 1911. But it was recognised doubtful if this figure represented anything more than the more advanced cases and that more than the more advanced cases and that possibly a majority of this number were the begging and pauper lepers who are seen all over the country. Dr. E. Mulr, M.D., F.R.O.S., the Leprosy Research Worker at the Calcutta School of Tropical Medicine, said that "recent figures obtained from a carefully conducted but limited survey, tend to confirm the computation that there are roughly from a half to one million people in India suffering from leprosy."

Early in the year 1924, the British Empire Leprosy Relief Association was constituted in England with H. R. H. The Prince of Wales as Patron, the Viscount Chelmsford as Chairman of the General Committee and H. E. the Viceroy of India as one of the Vice-Presidents. Following its formation and in view of the good results being obtained from the newest treatment of leprosy, H. E. the Viceroy felt that the time was auspicious for the inauguration and carrying on of an earnest campaign with the object of ultimately stamping out leprosy from India.

His Excellency invited certain gentlemen representing various interests to form an Indian Council of the Association, which he formally inaugurated at a public meeting in Delhi on the 27th January 1925.

A general appeal for funds in aid of the Assoclation was issued by His Excellency the Viceroy on the date of the inauguration of the Indian Council which was closed after a year with realizations amounting to over Rs. 20,00,000 which was invested in the end of 1928. The investments amounted to Rs. 20,63,065 yielding an annual revenue of over Rs. 1,22,000.

In the scheme of anti-leprosy campaign which the Association put into operation, the respective parts to be played by the Central and Provincial Committees in carrying forward and Provincial Committees in carrying forward the aims and objects of the Association are definitely apportioned. The Central Com-mittee is vested with the task of promoting research, of preparing and publishing propa-ganda material, arranging for the training of doctors in the diagnosis and treatment of leprosy according to the latest methods and of conducting an expert survey of selected areas for the ascertainment of the facts regarding the incidence and endemicity of leprosy. Measures for the accommodation and treatment of leprous patients and other schemes of purely local interest are to be the concern of provincial committees as agents of the Indian Council in the Provinces.

The policy and principles of the British Empire Leprosy Relief Association, Indian Council, with regard to provincial committees are expressed in its "Memorandum on the method of conducting the anti-leprosy campaign in India" which was published in 1926. This document sought to bring out the following main points which according to the latest scientific researches should be the basis upon which all efforts ultimately to eradicate leprosy must rest:—

- (1) Pauper lepers form only a small fraction of the leper population, and the disease is common among all classes of the community.
- (2) Segregation is not the most appropriate method of dealing with lepers, for
  - (a) financially it would be impossible;
  - (b) any attempt to impose forcible segregation would drive patients, particularly those who are suffering from the earlier stages of the disease, to conceal their misfortune, and, as has been the case where such means have been adopted, only the more advanced and obvious lepers would be segregated,
- (3) The majority of the advanced cases are not highly infectious and are less amenable to treatment, while the early cases in which the disease has made but little outward manifestation, can be controlled by treatment.
- (4) The strongest hope of stamping out the disease lies in providing facilities for the treatment of early cases.

The Indian Council, therefore, while it did not desire to minimise the usefulness of homes and asylums for the care of lepers, strongly recommended that the efforts of the Provincial Com-

mittees should, for the present at least, be concentrated upon the establishment of dispensaries to serve the following objects:—

- (a) to induce patients to come forward at an early stage in the hope of recovery instead of hiding their malady till it becomes more advanced, more infectious and less remediable; and so
- (b) to shut off the sources of infection as the number of infectious cases will continually tend to diminish and the opportunities for infecting the next generation will become fewer.

The Governing Body of the Indian Council in their report for the year 1933, show that the Association's main work during the completed nine years of its life has been organisation and planning and the outlining of a programme of work varied by the selection of the most fruitful soils for experimentation in methods of work. One valuable product during theat period is the fact that "the leper is becoming less prone to hide his disease and there is an increase of general interest in the subject."

There are now seventeen provincial branches, including one in Mysore State and each of them has established treatment centres for leprous patients. In Assam, for instance, the number of clinnes rose from 81 in 1932 to 145 at the end of 1933. Many clinics in different parts of India report absolute cures of the disease.

His Excellency the Vicercy is the President of the Indian Council, Maj. Gen. C. A. Sprawson, C.I.E., K.H.P., I.M.S., Director General of the I.M.E. the Chairman of the Governing Body, Sardar Bahadur Balwant Singh Puri, the Honorary Secretary and Sir Ernest Burdon, Kt., C.S.I., C.I.E., the Honorary Treasurer.

## BLINDNESS IN INDIA.

All over the East, and in fact in most tropical and sub-tropical countries, blindness is very prevalent, and only of recent years have people begun to realise that much of this blindness can be relieved, and still more of it, if not most of it, could, with proper measures taken, be prevented. In Egypt, renowned for its suffer-ings from blindness, it was a gift of some £43,000 made by Sir Ernest Cassel at the beginning of this century that was the initiation of that fine ophthalmic service, which began under the guidance of Mr. MacCallen, has now spread all over the country and gives medical treatment to three or four hundred thousand patients a year. Northern Africa, Turkey, Persia, India and China are all countries where there is a very high incidence of blindness and suffering from eye disease, and where western medicine from eye disease, and where western medicine has not yet penetrated sufficiently deeply to make much impression on the mainly rural and illiterate populations. There is a great "trachoma belt" extending from China into Eastern Europe, stopped only from spreading all over the West by the higher standard of living, sanitation and cleanliness which the European nations have attained.

India is in this great **Blindness Belt.** According to the last census returns there are 480,000 totally blind persons in this population of more

than 300 millions. That is an incidence of 1½ totally blind to every thousand of the population. But the census figures are notoriously defective, and in several districts a special count has been made of the totally blind, and wherever this has been done, the census figures have been found to be much too low. Thus in the Masik district an incidence of at least 4.38 per thousand was found as against the census figure of 1.74. In Ratnagiri an incidence of 1.5 was found as against the census figure of 0.7; in Bijapur 2.6 as against 0.7; in the United Provinces a Deputy Commissioner had a count made and found no less than 9 per thousand. In Palanpur 7 per thousand was found. If, as is not unlikely, this sort of error of underestimation in the census report is general, then it is not unreasonable to suppose that the real number of totally blind persons in India is more like 1½ millions than the half million shown in the census returns.

These are the figures for total blindness and they by no means give the full picture, for they include only totally blind of both eyes and say nothing of the much greater number who, from neglected eye diseases, are partially or even nearly blind, and whose happiness and efficiency are thus greatly impaired. The term "blindness" has a different interpreta-

tion in every country. In a report on the Prevention of Blindness, published by the League of Red Cross Societies these different interpretations are shown. In the United States blindness is defined as "inability to see well enough to read even with the aid of glasses; or for illiterates, inability to distinguish forms and objects with sufficient distinctness"; and in Egypt a person is accounted blind who cannot see fingers at a distance of one metre. If such persons were counted in our statistics of total blindness in India, there is little doubt that the figure would be very much larger than those indicated above. Recently the All-India Blind Ralief Association has made an analysis of a very large number of patients attending its camps and dispensaries, and has found that among these patients for every totally blind person there are three with more or less damaged vision, the result of eye disease. It appears not unlikely that the true ophthalmic condition of India would be represented by figures showing one and a half million totally blind persons, and in addition to these four and a half million with more or less impaired eyesight.

"No one," says Col. R. H. Elliot, late of the Madras. Ophthalmic Hospital, writing in the British Journal of Ophthalmology of May 1919, "who has not worked in India can form any conception of the enormous amount of preventable and curable blindness which is laying its shadow over the health, happiness and usefulness of this great portion of our Empire", and the same writer in another place has said:—"It is difficult for anyone who has not had first hand experience of medical practice in the East to realise the state of things out there granular ophthalmia claims its victims by the ten thousand, whereas it is really a disease which, when properly treated at an early stage, should not cause the loss of a single eye. The neglect of patients suffering from small-pox and other febrile conditions leads to a vast amount of blindness, while the treatment of mild ocular affections by irritant drugs is probably one of the most evil factors that spread blindness broadcast throughout the land. Large numbers of men and women suffering from glaucoma, from cataract and from other curable diseases, are allowed to hide in their villages like wounded animals, waiting only their release by death. This is not an overdrawn picture. It is a statement of cold, hard, cruel facts, well known to everyone who has practised or is practising medicine in the East,"

In an editorial on the Ophthalmic work in Egypt and the possibilities of similar work in India, the Indian Medical Gazette (March 1928) remarks:—"It would seem worth while for the Government of India to examine the working of this splendid organisation, for, in spite of the fact that workers in India have always been in the front in advances in ophthalmology, there has been little organised work in ophthalmic research except in Madras; even there the work has been done by men who have already a large amount of routine work to perform. India as a whole owes its position in the ophthalmic world entirely to the energies of individual enthusiasts, whose names are so well known that it is not necessary to mention them. Whas been possible in Egypt should also be possible

in India and it would appear that the first step should be the establishment of Schools of Ophthalmology, in places like Madras and Calcutta where ample facilities exist. At these schools advanced teaching and research in ophthalmology would be carried out, and the next step would be to organise a system of ophthalmic relief at selected centres all over India." (There are now schools of ophthalmology at Madras, Bombay, Calcutta, and Lahore).

Associations known as "Blind Relief" Associations have been working for several years in Western India, in conjunction with Government hospitals, to alleviate this affliction of blindness. The number of eye doctors in India is notoriously small and those there are stay mostly in the large towns. The Associations work by means of travelling hospitals, which bring relief to the villages in the rural areas. They also work by means of trained village workers, whose duty it is to find out the "hldden blind" and get them to the medical centre for relief; to find out cases of small-pox (a constant source of blindness in children); to inspect new born children for the detection of ophthalmia neona-torum; to keep registers of all blind and partly blind persons and persons suffering from eye disease; and to treat in the villages simple cases of conjunctivitis or sore eyes. Since their inception the Associations have been the means of restoring sight to thousands of blind people and of preventing blindness in many thousands more. The work is capable of indefinite extension and the need for some such organisation has been shown. In 1917 Colonel Elliot wrote as follows, "To me it seems that the duty and privilege of undertaking this work lie with the State, and that no sum spent on such a task could be too large. Unfortunately this is not the view that has been taken by those in authority and consequently we see the specta-permissible to voice an admiration for the stand taken by Mr. Henderson. [Founder of the Blind Relief Association movement, who began the work in 1913]. The best that one can hope for his endeavour is that he will succeed in arousing the conscience of educated Indians to the needs of their less fortunate countrymen, and that this little cloud, no bigger than a man's hand, will end in a monsoon of active effort".

As the above was written in 1917, it is not altogether applicable to the criticism of Government of to-day, as it has already been shown that there are now several schools of ophthal mology in India, and the Government eye hospitals are doing tremendous work; but these hospitals are situated in the large towns and cannot possibly by any stretch of imagination, give relief to the millions living in the rural areas.

The All-India Blind Relief Association.—
(The Green Star Society) exists to co-ordinate and centralise the various Associations in the mofussil and to extend their work. It is under the patronage of the Governor of Bombay, and has for its life President, Mr. C. G. Henderson (late I. C. S.) who founded and managed for many years all the branch Associations working in Western India. It is affiliated to the International Association for the Provention of Blindness, which has its headquarters in Paris and was formed on September 14th, 1929, under the auspices of the League of Red Cross

Societies and the American Society for the Prevention of Blindness. The Organising Secretary is R. Crawford Hutchinson, The Town Hall. Bombay.

Secretary is it. Crawford Hutenisson, The Town Hall, Bombay.

A beginning has been made, but it is only a beginning, and it is but the fringe of this vast problem that has been touched. The schools of ophthalmology in India are turning out ophthalmology in India are turning out ophthalmology in India are turning out reference in the cities and large towns. A scheme for taking these men and placing them in selected centres has been worked out, all that is required is monetary help. The cost is minimal and here is an opportunity for the generous and public spirited to emulate Sir Ernest Cassel, and give to India an eye service of which India and the whole world could be proud, and to the peoples of India that which to them is probably their most precious possession—their sight.

## THE MATERNITY AND CHILD WELFARE MOVEMENT.

Amongst the most pressing problems of India's health is that presented by the appalling maternal and infant mortality. The figures for maternal mortality are not accurately known, but they are certainly not less than 10 per thousand live births, often more. It has been calculated that every year no fewer than 2 million Indian bables die, while many others survive only to grow weak and feeble from unhygienic surroundings during infancy. A noteworthy feature has been the further progress of the infant welfare movement, which owes much to the All-India Maternity and Child Welfare League initiated by Lady Chelasford and also to the Indian Red Crass Society, which aims at graculary establis ing a network of child welfare centres in most of the larger towns in India. The amalgamation of these two Bodies which has taken place, forming the Maternity and Child Welfare Bureau, will undoubtedly increase and develop the work. In all the great centres of population, word is now being done for the training of midwives, for the instruction of mothers and for the care of bables. Training centres for Indian and Anglo-Indian women have been opened in order to spread the elements of Indian hygiene to other parts of India. Most hopeful sign of all, Indian ladies are beginning to interest themselves in this work in large numbers. But such is the magnitude of the field, that a consistent widespread effort on a scale hitherto impossible must be undertaken, if any appreciable reduction is to be made in the appalling mortality of young children.

Centres of Activity are organised on a provincial basis, though the various provinces differ considerably in the nature of the work undertaken and the amount of organisation displayed. It is noteworthy that the work is most co-ordinated and most energetically carried on where there are persons appointed under the Directors of Public Health whose special duty it is to foster Child Welfare activities.

The care needed by the wives and children of sepoys in the Indian Army is being

increasingly realised, and nowhere more than in the units themselves. The result has been, in the last few years, the opening of much work in this direction. Much of it is purely medical work, which, in the absence of tamilies hospitals for the Indian soldiers, is a necessity. But genume child welfare activities are also present in some centres many of them assisted by the M. & C. W. Bureau Indian Red Gross Society which has undertaken the organising work in place of the Lady Birdwood Army Child Welfare Committee. A remarkable feature of this movement is the keenness of the men themselves to aid it, realising as they do the benefit to their own women and children. There are now very few cantonineuts where some work of this kind is not going on.

So far all the schemes have devoted their attention to educating women in the elements of mothercraft and attempting to preserve infant lives and improve child health. In a land of so many languages and superstitions progress will necessarily be slow and India has yet to decide whether she will work intensively and try to rear a few well developed children as far as adolescence or extensively attempt to bring a large number of infants through the first critical months, only to have them perish at a later stage from the many ills that childhood is helr to in a land of great poverty, undernourishment, epidemics and famine. In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds. Its inevitable corollaries are endless, and like the banyan tree it will no doubt in India also develop innumerable fresh roots, medical supervision, dental clinies, better housing, open air playgrounds, etc., etc. But these are not yet. Its preliminary task is to educate the mothers of India to the enomity of allowing two million bables to perish every year and to convince them of the equally important fact that a high death rate always spells also a high damage rate of sickly, under-developed, incompetent citizens.

#### INDIAN RED CROSS SOCIETY.

When the war first broke out, what is generally termed Bed Cross work was undertaken in India and Mesopotamia by the St. John Ambulance Association and by a number of provincial organisations working on independent lines. From August 1916, the central work was taken over by the Indian Branch of the Joint War Committee of the Order of St. John of Jerusalem and the British Red Cross Society. The final report of that Committee shows that up to June 1920 its total receipts amounted to Bs. 1,77,85,716 of which some 17 lakhs had been contributed by the British Red Cross Society. It had spent about 67 lakhs in Mesopotamis, nine lakhs on the Afghan War and Waziristan Expedition; in Mesopotamia and India combined it had spent on Red Cross objects in all about 117 lakhs.

It closed its career in June 1920 under the following circumstances. In the summer of 1919, an invitation had been received to join the International League of Red Cross Societies, having for its object the extension of Red Cross work in the sphere of purely civil activity. Though there was then no formally constituted Red Cross Society in India, the invitation was accepted, thus giving India a distinct position in a world-wide League of humanitarian societies, A Rill to constitute an Indian Red Cross Society was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920, and duly, passed into law as Act XV of 1920. This Act handed over the balance of the Joint War Committee to the new Society, and jauthorised it not only to direct the utilization for war purposes of the capital funds at its disposal but also to devote the interest, as far as possible, for civil purposes. As contemplated in the Act of Constitution of the Society, its activities are completely decentralized, and are being carried on through twenty-two Provincial and State Branches under which there are numerous sub-branches.

The objects on which the funds of the Society may be spent are—

- 2. The care of the sick and wounded men of His Majesty's Forces, whether still on the active list or demobilised.
- 2. The care of those suffering from Tuberculosis, having regard in the first place to soldiers and sailors, whether they have contracted the disease on active service or not.
  - 8. Child welfare.
- 4. Work parties to provide the necessary garments, etc., for hospitals and health institutions in need of them.

- 5. Assistance required in all branches of nursing, health and welfare work, anciliary to any organisations which have or may come into being in India and which are recognised by the Society.
  - 6. Home Service Ambulance Work.
- 7. Provision of comforts and assistance to members of His Majesty's Forces, whether on the active list or demobilised.

The Society has five grades of subscribing Members, namely, Honorary Vice-Presidents, Patrons, Vice-Patrons, Members and Associate Members. Their respective subscriptions are Rs. 10,000, Rs. 12000, Rs. 12 annually or a consolidated payment of Rs. 150, and anything between Re. 1 and Rs. 5 annually or consolidated payment of Rs. 50. At the end of 1033 there were 12,500 adult members of these various grades,

To stimulate interest in the aims and objects of the Society amongst the future generations a Junior Red Cross movement has been instituted which embraces the student population. The Punjab Provincial branch has taken the lead in furthering this movement. Other provinces are now following suit and at the end of 1931 the number of members was 252,941.

Constitution.—His Excellency the Vicercy is President of the Society. The Managing Body ordia rilly consists of a Chairman to be nominated by the President and 25 members of the Society of whom 12 are the Vice-Presidents nominated by Provincial or State Branches 8 elected by the Society at the Annual General Meeting from among the members of the Society and 5 nominated by the President.

The present Chairman of the Managing Body is Sir David Petrie, Kt., C.I.E., C.V.O., C.B.E., and the Organising Secretary, Miss Norah Hill, A.R.R.C.

Finances.—The operations of the Joint War Committee were brought to a close in June 1920 with a capital investment of the face value of Rs. 56,33,000 and Rs. 3,01,500-8-6 in floating and fixed deposit accounts. The Society has since invested further funds in various securities and its finances at the end of December 1933, stood at a capital investment of the face value of approximately Rs. 67½ lakhs. The income derived from the capital of the Society, (which is 3½ lakhs at present) after providing for certain liabilities of the Central Society, is distributable under the Act to the Provincial Branches in proportion to their contributions to the Central 'Our Day' Fund.

#### St. JOHN AMBULANCE ASSOCIATION.

# (Indian Council.)

- (a) The instruction of persons in rendering First Aid in cases of accident or sudden illness and in the transport of the sick and injured;
- (b) The instruction of persons in the elementary principles and practice of nursing, and also of hygiene and sanitation, especially of a sick room :
- (c) The manufacture, and distribution by salc or presentation, of ambulance material, and the formation of ambulance depots in mines, factories, and other centres of industry and traffic:
- The Organisation of Ambulance Corps. Invalid Transport Corps, and Nursing Corps,
- (e) And generally the promotion of instruc-tion and carrying out of works for the relief of suffering of the sick and injured in peace and war independently of class, nationality, or denomination.

An Indian Council of the Association was constituted on a regular basis in 1910. It has since issued over 200,000 certificates of proficiency in First Ald, Home Nursing, Home Hygiene and Sanitation and over 10,000 tokens such as Vouchers Medallions, Labels and Pendants for speedal proficiency in those subjects. The object of the Association is not to rival, but to aid, the medical man, and the subject-matter of instruction given at the classes qualifles the pupil to adopt such measures as may be advantageous pending the doctor's arrival, or during the intervals between his visits.

The St. John Ambulance Association was certificates: i.e., 12,869 in First Aid, 584 in founded in 1877, by the Order of the Hospital Home Nursing, 451 in Hygiene and 53 in Sani-off St. John of Jerusalem in England, and has for its objects:—

Mothercraft, introduced in 1932 has not made the statement of the stat much headway. To popularise Home Nursing, and Domestic Hygiene and Mothercraft courses among young girls and women special propa-ganda was stated. Stops were taken during 1933 to arrange first aid courses for the personnel of flying clubs, but the response was poor.

> The Association has five grades of members, namely, Patrons, Honorary Councillors, Life Members Annual Members and Annual Asso-Members Annual Members and Annual Associates. Their respective subscriptions are Rs. 1,000, Rs. 500, Rs. 100, Rs. 5, and Rs. 2.

The income of the Indian Council at headquarters consists primarily of interest on securi-ties, a fixed annual grant from Government, fees for certificates and membership subscriptions. The total income for 1933 was Rs. 17,897, a more or less normal figure. Management expenses amounted to Rs. 22,413. After adjusting assets and habilities outstanding the revenue account for 1933 showed a loss of Rs. 6,305. The Council was able to carry on by taking a loan of Rs. 7,000 from the Indian Rad Cross Society and by buying much less stores than it sold, the balance of stores stock thus being reduced by Rs. 11,000. The Council realise that the financial position and its maintenance by temperary expedients is unsatisfactories. by temporary expedients is unsatisfactory.

Their Excellencies the Viceroy and the Countress of Willingdon and His Excellency the Commander-in-Chief as President, Lady President and Chairman, respectively, with 17 members form the Indian Council. The general business of the Indian Council is conducted by an Executive Committee of which the Hon'ble During the year 1933 22,853 persons attended | Sir David Petric, Kt., C.I.E., C.V.O., C.B.E., is 1,583 courses of instruction in First Aid, Nursing the Chairman, Miss. Norah Hill, A.R.R.C., the Hone, Home Hygiene and Sanitation and of General Secretary, and Sir Ernest Burdon, these 13,957 qualified for the Association's | Kt., C.S.L., C.I.E., I.C.S., the Honorary Treasurer.

#### INSANITY AND MENTAL HOSPITALS IN INDIA.

The accommodation for the treatment in The accommodation for the treatment in British India of persons who suffer from mental disorders is still very inadequate. In the Indian States, the condition of affairs is even worse, for, with the sole exception of Mysore State which has a small and highly archaic mental hospital at Bangalore, there are no mental hospitals in existence so that persons except the mental diseases are suffering from all forms of mental disease are confined in the Jails where, of course, no provi-sion exists for any kind of treatment. According to the last Census (1931) out of a total popula-

tion of 352,837,778 (India and Burma) there are 120,304 persons insane, making a proportion of insane to sane of 3 per every 10,000. In the United Kingdom the proportion of insane to sane is roughly 40 per 10,000, while in New Zealand it is as much as 45 per 10,000. In reviewing these figures it must be borne in mind that those of the United Kingdom and New Zealand include the "feeble-minded" an item that is not included in the figures for British India;

INDIA.

Provinces, States						Insane population				
	and A	Agencie	38.		Males.	Females.	Females. Total.			
British Indi				••	139,931,556 41,897,367	131,595,377 39,413,478	271,526,933 81,310,845	} 120,304		
		otal for all India	181,828,923	171,008,855	352,837,778	120,304				

For the care of the 120,304 insanes of India and Burma there exists accommodation in mental hospitals for 9,244 hence only one person in eight out of the total insane population can obtain accommodation in institutions which exist

especially for their care and treatment.

The following table gives the number of mental hospitals in each province during 1927, the total population of each institution and the number discharged cured and died:—

Provinces.		of Mental Hospitals.	Admitted and readmitted during the year	Total Population of Mental Hospitals.			Discharged cured.	d.	Daily average.		Criminal Lunatics.

It will be observed that there is now no mental hospital in Bengal. Insanes from this province are treated in one or other of the two mental hospitals at Ranem. All Mental hospitals are under the direct control of the Provincial administrative medical officers except the European Mental Hospital at Ranchi which is controlled by a Board of Trustees presided over, by the Commissioner of Chota-Nagpur. The socalled "Central" Mental Hospitals, that is to say, the Mental Hospital at Madras, North Yeravda (Bombay), Lahore (Punjab), Agra (United Provinces of Agra and Oudh) and Rangoon (Burma), as well as the two Mental Hospitals at Ranchi (one for Europeans and Americans and one for Asiatics and Africans) are administered by whole-time medical officers who are usually trained alienists. The Administration of the remaining Mental Hospitals in Brittsh India and Burma lies with the Civil

Surgeon of the locality in which they happen to be situated. It is probably true to state that only one Mental Hospital in the whole of India can claim any pretension to be up-to-date as regards organisation, staffing and equipment and that is the Mental Hospital for Europeans at Ranchi. All the others are for the most part over-crowded and under-staffed, thus rendering anything approaching treatment on modern lines out of the question. The only province in India which has so far displayed some appreciation of the importance of bringing the prevention and treatment of mental disorders into line with conditions in civilised countries is Madras. The local Government of this province has achieved a notable advance in its attitude towards mental disorders by providing, in the construction of the new General Hospital at Madras, accommodation for the treatment of early cases of mental diseases.

As regards the incidence of insanity among the various races of India as well as the incidence of insanity in relation to occupation, no reliable information is available in view of the comparative paucity of cases in proportion to the general

population that come under observation. On the other hand the incidence by age is shown fairly well in the Census Report of 1921 which is as follows:—

INDIA.

AGE.						Ins	ane.	Distribution of the insane by age per 10,000 of each sex.	
						Male.	Female.	Male.	Female.

A further result of the widespread ignorance and apathy both official and non-official, towards psychiatry and its cognate interests, is the lack of any provision for the care and treatment of mentally defective children. In 1925, the Hon'ble Haroon Jaffer moved the Council of State to recommend to the Governor-General in Council that the Provincial Governments be asked to investigate the best means of dealing quickly and adequately with cases of mental defectives. A discussion followed which was remarkable only for the ignorance of the subject displayed by all who took part in it. The motion was eventually withdrawn.

Finally there is still a lamentable failure everywhere to appreciate the intimate associa-

tion of crime with mental disorder and the extreme paucity of medical men throughout the whole of India with any real knowledge of mental diseases leave the decision of questions involving what the law terms "responsibility" in crime in the hands of medical men who are in no sort of sense "experts". In other words the current ideas both as regards the theory and practice of dealing with insanity and crime in India can only be described as archaic.

(See also "Insanity in India" by Colonel G. F. W. Ewens, I.M.S., and "Lunacy in India" by Colonel A. W. Overbeck-Wright, M.D., D.P.E., I.M.S. and Colonel H. P. Jago [Shaw's book.)

# National Association for Supplying Medical Aid by Women to the Women of India.

The National Association for Supplying It has assisted by grants-in-aid the building of Medical Aid by Women to the women of India a number of zenana hospitals in different parts was founded by the Countess of Dufferin in 1885, of India. It has affiliated to it 18 Provincial the object being to open women's hospitals and women's wards in existing hospitals; to train women doctors, nurses and midwives in India; and to bring these out when necessary from Europe. An endowment fund of about 6 lakhs was obtained by public subscription. In addition Branches were formed in each Province, each Branch having its own funds and each having a number of Local Committees and Zenana Hospitals affiliated to it.

The Central Fund gives grants-in-aid to several Provincial Branches; it gives scholarships to a number of women students at the Medical schools of Bombay, Calcutta, Madras and Delhi.
It has in the past brought from England a certain number of European medical women.

a number of zenana hospitals in different parts of India. It has affiliated to it 13 Provincial Branches and a number of Local Committees.

The Government of India subsidize the Countess of Dufferin's Fund to the extent of Rs. 3,44,306 per annum to maintain a Women's Medical Service for India—this service consists of 44 officers, with a training reserve of 8 doctors and a Junior service of 6 assistant surgeons. Medical women either British or Indian holding registrable British qualifications are eligible for the senior service.

The President is H. E. The Countess of Willingdon, C.I., G.B.E. The Hon. Secretary is the Surgeon to H. E. The Viceroy, and the Secretary Dr. M. V. Webb, C.M.O., W.M.S., Red Cross Building, New Delhi and Viceregal Patrice Stroke Estates, Simla.

#### THE WOMEN'S MEDICAL SERVICE FOR INDIA.

This Service is included in the National Asso-ciation for supplying medical aid by women to the women of India, generally known as the Counters of Dufferin's Fund and is administered by the Executive Committee and Council of that Fund. The Govern-ment of India has so far allotted the sum of Ez25,000 per annum towards its maintenance. The present sanctioned cadre is forty-four first class medical women, with a training reserve of 8 women graduates in medicine of Indian Swomen graduates in medicine of Indian under the suzeriated through the Governor-General of twenty-four and thirty at entry. (c) She must be a first-class medical woman, i.e., she must in the United Kingdom under the Medical class medical women with a training reserve of 8 women graduates in medicine of Indian Universities. Recruitment of the service is that Act: but this condition does not apply made (a) in India by a medical sub-committee of the Council which includes the Directorof the Council which includes the Director-General, Indian Medical Service, the Honorary Secretary to the Council and the Chief Medical Officer, Women's Medical Service; (b) in England, by a sub-committee, including a medical man and two medical women conversant with conditions in India. These sub-committees perform the duties of a medical board examining candidates for physical fitness, and for return to duty after invaliding.

The Council determines what proportions of the members of the Service is to be recruited in England and in India respectively. In the original constitution of the Service, duly qualified medical women who are in the service of, or who have rendered approved service to, the Countess of Dufferin's Fund, are to have the first claim to appointment, and thereafter special consideration is to be paid to the claims of candidates who have qualified in local institutions and of those who are natives of India.

Qualifications.—The qualifications are that the candidate must be (a) a British subject resident in the United Kingdom or in a British Colony or in British India, or a person resident in any territory of any Native Prince

This Service is included in the National Asso-; or Chief under the suzerainty of His Majesty to medical women in charge of hospitals who, in the opinion of the Council, are of proved experience and ability. (d) The candidate must produce a certificate of health and character. But the Council reserves the power to promote to the service adies not possessing the above qualifications, but who have shown marked capacity. Members of the Service are required to engage for duty anywhere in India. After one year of probation has been satisfactorily passed their appointments are confirmed. The services of officers may be lent to Local or Municipal bodies, or to special institutions, which may be responsible for whole or part of the pay.

Pay.—The rates of pay are as follows:--1st to 3rd year Rs. 450 per month. 4th to 6th 500 7th to 9th 550 10th to 12th 600 ,, •• 13th to 15th 650 .. • 16th to 18th 700 i, ,; 19th to 21st 750 ;, ,, 22nd to 24th 800 į,

24th and after

also an overseas allowance of Rs. 100 per expenses. There are also allowances to cover month to those below 12 years' service and the cost of journeys by rail and road.

Rs. 150 per month to those of 12 years' service and over. Every officer of the Service shall pass an examination in such vernacular as the Executive Committee shall appoint within the exact of the service, and shall receive an equal amount, and each subscriber's account of increment after that period until such large general lates at the expectation. no increment after that period until such examination has been passed. In addition furnished quarters are provided free of rent or a house rent allowance to be determined by the Provincial Committee may be granted in lieu of it.

Officers of the Service are permitted to engage in private practice provided it does not interfere with their official duties, and the Provincial Committee has the power to deter-mine whether such duties are thus interfered with. Except in very special cases retirement is compulsory at the age of fifty-five An officer recruited in England, whose appointment is not confirmed, or who is dismissed, is granted an allowance sufficient to pay her passage to England.

Leave Rules.—(a) Casual Leave, which is occasional leave on full pay for a few days, and is not supposed to interrupt duty. (b) Leave on average pay is granted up to 2-11 of an officer's period on duty, a ccording to Fundamental Rules. More than eight months' leave on average pay is not granted up to twelve months during the whole service. An allowance of 12 sh. per day is granted in addition to a verage pay during study leave. (d) Extraordinary leave at any time at the discretion of the Executive Committee. (e) Leave not due may be granted subject to the following conditions:—(i) on medical certificate, without limit of amount; and (ii) otherwise than on medical certificate, for not more than three months at any one time and six months in all, reckoned in terms of leave on average pay. (f) reckoned in terms of leave on average pay. (f)
The maximum period of continuous absence from duty on leave granted otherwise than on medical certificate is 18 months. (g) When an officer returns from leave which was not due and which was debited against her leave account, no leave will become due to her until the expiration of a fresh period spent on duty, sufficient to earn a credit of leave equal to the period of leave which in the she took before it was due. There are no tive C allowances during extraordinary leave. A made doctor appointed in England receives a sum of shall r £100 to cover her passage and incidental ment.

There is also a Provident Fund, each member contributing monthly thereto ten per cent. of her salary, the Association contributing an equal amount, and each subscriber's account being granted interest on the amount standing to credit at the rate of 4 per cent. per annum "or at such rate as the Council can invest without right to the Association". without risk to the funds of the Association."

An officer loses the contributions made to her account by the Association with the interest thereon if she resigns (except on account of illhealth) before completing five years' service or in the event of dismissal. On retirement after approved service the sum which has accumulated to the credit of the subscriber is handed over to her.

Free Passages.—Officers of the Women's Medical Service are granted free return passages corresponding to those granted under the Lee Concessions to officers of all-India services. The maximum number of return passages granted during an officer's entire term of service must not exceed four, the first falling due after 4 years service.

The Training Reserve of the Women's Medical Service —This Service has a sanctioned cadre of eight, and is open to women graduates in medicine of the Indian Universities. Salaries range from Rs. 200 to Rs. 300 per month, with furnished quarters or the equivalent in money, to those employed in India.

- 2. Two of the eight members of the reserve, but not more at any one time, may be deputed to Europe by the Executive Committee for post-graduate training, and shall receive a stipend at the rate of £ 200 a year each paid quarterly and return passage. Any member not so deputed shall be employed in India.
- 3. Ordinarily four years shall be spent in the reserve before a member is considered for appointment to the Women's Medical Service, but the Executive Committee shall have powe, to shorten this period in special cases. Service in the reserve shall be considered by the Executive Committee when appointments are being made to the Women's Medical Service, but shall not of itself constitute a claim to appoint-

#### VICTORIA MEMORIAL SCHOLARSHIPS.

The Victoria Memorial Scholarships Fund was have been partially trained. Of late years the organised by Lady Curzon in 1903, in order to secure a certain amount of improvement in the practising dais of India. A sum of about 64 lakhs It has also done much propaganda work.
was obtained by public subscription, and centres The fund is now administered by the Maternity was obtained by public subscription, and centres were organised in each Province to carry out the objects of the Fund. Over 2,000 midwives have been trained in addition to large numbers who

Fund has done much to pave the way for the registration and supervision of indigenous dais. and Child Welfare Bureau of the Indian Red Cross Society.

#### LADY HARDINGE MEDICAL COLLEGE AND HOSPITAL.

The Lady Hardinge Medical College was Students are prepared for the Intermediate opened by Lord Hardinge on the 17th Science Examination, and the M.B., B.S. degree opened by Lord Hardinge on the 17th February 1916. It is a residential Medical College was legestaffed entirely by women, and was founded to commemorate the visit to Delhi, in 1911, of the Queen Empress. Lady Hardinge took the initiative in raising funds by public subscription to meet the cost of buildings and equipment. Thirty lakhs of rupees, in all, have been given for these purposes, mostly by the Ruling Princes and Chiefs of India. After Lady Hardinge's death in 1914, it was suggested by Her Imperial Majesty Queen Mary that the institution should serve as a memorial to its founder, and be called by her name.

The Governing Body includes the Director-General, Indian Medical Service, the Chief Com-missioner of Delhi, the Chief Engineer, Delhi Province, the Educational Commissioner with the Government of India, the Chief Medical Officer, Women's Medical Service, a represen-Omeer, Women's Medical Service, a representative elected by the All-India Association of Medical Women, the Surgeon to H.E. the Viceroy, an Indian member of the Council of State, 2 Indian members of the Legislative Assembly, a private Indian entiren of Delhi, arrivate lady resident of Delhi, the Civil Surgeon of New Delhi and the Agent, Imperial Bank of India, Delhi. The Honorary Secretary, who is also a member of the Governing Body, is the Denuty Director-General Indian Medical Service Deputy Director-General, Indian Medical Service The Deputy Accountant-General, Central Reve-ues, acts as Honorary Treasurer.

The College and Hospital, together with separate hostels for 100 Medical students and 70 nurses and residences for the medical and teaching staff, occupy a site of 55 acres in New Delhi within easy reach of old Delhi city. The grounds are enclosed and adequate provision is made for the seclusion of both students and patients from outside observation. Strict observance of purdah cannot, however, be guaranteed in the case of students. As the hospital patients are all women or children, it is for example, necessary that students should, in their final year, attend a brief course of instruction on men patients at the Civil Hospital, Delhi. The College buildings contain a Library, Museum, Lecture Rooms, Laboratories and offices. Hostels are provided for Hindu, Moslem, Sikh and Christian students. The hospital is a fine and constain students. The hospital is a fine training school for Natises, and (2) a training modern building with accommodation for 200 school for Dispensers. All particulars as to in-patients and a commodious out-patients' admission and training may be obtained in the department. The College and Hospital are case of (1) from the Nursing Superintendents, supported by a grant of Rs. 3,11,000 from this Government of India, supplemented by grante Delhi, and in the case of (2) from the Lecturer from Provincial Governments and Indian States. on Pharmacy, at the same address.

of the Punjab University, with which the College is affiliated.

#### NURSING.

velopment of skilled nursing of recent years, public on payment of a prescribed scale of This activity is principally centred in the less. These hospitals also act as training Bengal, Madras, and Bombay Presidencies, institutions, and turn out a yearly supply of

Whilst India cannot show the complete where the chief hospitals in the Presidency chain of efficiently-nursed hospitals which towns are well nursed, and where large private exists in England, there has been a great destaffs are maintained, available to the general

fully trained nurses, both to meet their own raised from private sources. demands and those of outside institutions and private agencies. In this way the supply of trained nurses, English, Anglo-Indian and Indian, is being steadily increased. In Bombay the organisation has gone a step farther, through the establishment of the Bombay Presidency Nursing Association, c/o St. George's Hospital, Bombay. This is composed of representatives of the various Nursing Associations in charge of individual hospitals, and works under the Government. The principle on which the relations of this Association with the Local Associations is governed is that there shall be central examination and control combined with complete individual autonomy in adminis-

much required. A meeting was held in Bombay in 1923 when Nurses from the Presidency met to discuss the question. It is desired that India of the examining and granting certificates to should have its own State Register as in the nurses and midwives, and maintaining a register United Kingdom, South Africa, New Zealand, of qualified nurses and midwives and also main-Australia, Canada and Burma, and that the curricula and examinations should be brought into line with these countries Government has proposed to establish a Provincial Register preparatory to an All-India Register.

Burcau, 37, McLeod Street. In Madras there is the General Hospital, with a staff of 62 nurses. the Government Maternity Madras with a staff of 62 nurses, the Government Maternity Hospital, the Caste and Gosha Hospital at Kilpauk, the Royapetta Hospital and the Ophthalmic Hospital, also the Lady Ampthil Rurses' Institute and the South Indian Nursing Association (now amalgamated). President, Hor Excelency Lady Goschen. The Association has under its management—The Lady Ampthil Nurses' Institute, Western Caste, Mount Road, Madras, Fully trained and experienced nurses for all cases of illness both among Europeans and Indians, always available.

Hate fully considering the Sub-Committee's report the Committee agreed that the Association heving form the United Kingdom. Pending the passing of the Act the new Memorandum of Association having received the approval of Government was brought into operation from experienced nurses for all cases of illness both among Europeans and Indians, always available.

The following are affiliated Associations as well as Training Institutions experienced nurses for all cases of littless both among Europeans and Lidans, always available. The Lady Willingdon Nurving Home, Western Castle, Mount Road, Madras, and Night Nursing and Convalescent Home, Octacamund, for Medical, Surgical and Maternity cases. The Nilghri Nursing Home affords admirable facilities for convalescents.

Bombay Presidency.—The Bombay Presidency was amongst the first in India to realise the value of nursing in connection with hospital work. The first steps were taken on the intiative of Mr. L. R. W. Fourest at St. George's Hospital, Bombay, where a regular nursing cadre for the hospital was established together with a small staff of nurses for private cases. This was followed by a similar move-ment at the J. J. and Allied Hospitals and afterwards spread to other hospitals in the Presidency.
Ultimately, the Government laid down a definite principle with regard to the financial aid which they would give to such institutions, agreeing to contribute a sum equal to that

Afterwards, as the work grew, it was decided by Government that each nursing association attached to a hospital should have a definite constitution and consequently these bodies have all been registered as Associations under Act 21 of 1860. By degrees substantial endowments have been built up, although the Associations are still largely dependent upon annual subscriptions towards the maintenance of their works. Association was incorporated under the Societies' Registration Act of 1860, in the year 1911, with the primary object of establishing a nursing service from which the Nursing staff at Government aided hospitals under management of Nursing Association might be recruited. function, however, was never carried out by the Bombay Presidency Nursing Association, and State Registration of Nurses for all India is under the present circumstances it appeared to the Committee improbable that it could be carried out, but up to now the auxiliary function taining a Provident Fund for the employees of the afhliated associations have been successfully carried out from 1911 to 1933. Memorandum, Rules and By-laws of the Association were however revised brought into line with the actual working of the Association. Towards Nursing Bodies.—The Secretary of the Calcutta Hospital Nurses' Institution is Mr. A. R. Nicholson, Allahabad Bank Buildings, Calcutta. The names and addresses of the other Nursing The names and addresses of the other Nursing hodies in Calcutta are Lady Minto's Indian Nursing Association (Bengal Branch), 4, Hungerford Street, Lady Rogers' Hostel for Indian Nurses, 144, Russa Road, South; Nurses' Academy, 6, Suburban Hospital Road; and Nurses' and that the only way to put things in order would be to draft an entirely fresh constitution and rules. and rules.

Provision for retiring allowances is made for all members on the basis of a Provident Fund,

Address:—The Registrar, Bombay Nursing Council, Old Custom House, Fort, Bombay.

Lady Minto's Indian Nursing Association.—In 1906 this Association was inaugurated, replacing the Punjab and Up-country Nursing Association for Europeans in India, which society, established in 1892, had accomplished much useful work in this country. Owing, however, to lack of funds it was found impossible to continue its administration and to carry out

the expansion of the work so urgently called tendents of India are not Associations to for. The name of the helpers identified with employ or to supply nurses, but are organithe premier Association to whom the public zations with a membership wholly of nurses for. The name of the helpers identified with the premier Association to whom the public must ever be indebted are the Hon. Lady Lyttleton, Lady Helen Munro Ferguson and Mrs. Cottrell, while Mrs. Shepherd, by her indefatigable efforts, is truly entitled to be regarded as the pioner of a trained nursing system throughout the greater part of India. The late Lady Curzon worked energetically to recycle a pulsared Nursing organisa. cally to provide an enlarged Nursing organisa-tion, but mainly owing to financial reasons, she was unable before she left India to bring the scheme to fruition. The Home Committee of the existing Association, recognising the need for expansion, consented to take over the present Association and approached Lady Minto before she left England in 1905 for cooperation towards this project, and after much consideration and discussion with the Govern-ment of India, Lieut.-Governors and Commissioners of Provinces, the present Association was established. An appeal by Lady Minto addressed to the public both in England and India, was responded to most generously, and sufficient funds were collected to form an endowment fund, which has in spite of fluctua-tions increased a little with time. The assistance of a Government grant is much valued, as it enables Homes for the Sisters to be kept up in six Provinces in India and in Burma. At the request of the Home Committee the enlarged Association was renamed the "Lady Minto's Indian Nursing Association."

The duties of the Home Committee are, as before, largely concerned in dispatching-as required—suitably trained and carefully selected Nurses for service on the staff of the Association in India. Thus, Europeans who are members of this Association are enabled to obtain skilled nursing at moderate charges on a sliding scale of fees determined by the income of each patient. The boon of obtaining good nursing at moderate terms is much appreciated, the rates of subscriptions being really an insurance against illness.

Her Majesty the Queen is a Patron of the Association. Her Excellency The Countess of Willingdon is President of the Central Committee in India.

Hon. Secretary: Malox F. M. Collins, R.A.M.C. Chief Lady Superintendent: Miss G. Beckett. Address—Central Committee, L.M.I. N.A., Vloerezal Lodge, Simla; and Red Cross Building, New Delhi.

Secretary, Home Committee: Miss M. E. Ray, R.R.C., 10, Witherly Mansions, Earls Court Sq.

Nurses' Organizations.—The Association of Nursing Superintendents of India is now amalgamated with the Trained Nurses' Association of India, and has the one set of officers. with the avowed objects of improving and unifying nursing education, promoting end de corps among nurses, and upholding the dignity and honour of the nursing profession. The Associations have a membership of 472, including nurses trained in ten or more different including nurses trained in ten or more currerent countries. Europeans, Americans, New Zealanders, Australians and Indians. The Association of Superintendents was started in 1905 as the Association of Nursing Superintendents of the United Provinces and the Punjab, but by the next year its membership had spread over the country to such an extent that the over the country to such an extent that the name was changed to include the whole of India. The Trained Nurses' Association was started in 1908, and a monthly Journal of Nursing began to be published by the two Associations in February, 1910. The Associations are affiliated with the International Council of Nurses.

The Trained Nurses' Association of India.-Was founded and incorporated with the Association of Nursing Superintendents in 1908. Its objects are (a) to uphold in every way the dignity and honour of the Nursing profession; (b) to promote a sense of esprit de corps among all nurses; (c) to enable members to take counsel together on matters affecting their profession; (d) to elevate nursing education by obtaining a better class of candidates; (r) to raise the standard of training; (f) to strive to bring about a more uniform system of education, examination and certification for trained nurses, both Indian and European, and (g) to arrange reciprocity between different provinces, States and other countries. Nurses eligible for membership are those holding a certificate of not less than three years' general training in a recognised training school. The Trained Nurses' Association of India is affiliated with the International Council of Nurses and its affiliated Associations are the Health Visitors' League and the Midwives' Union. The official organ of the Association is called "The Nursing Journal of India". The Association has 800 members and 304 student nurses.

#### THE WOMAN SUFFRAGE MOVEMENT.

Hon. Secretary and Treasurer: Miss Gadsden, General Hospital, Madras.

Within the abnormally short period of eleven years the Woman Suffrage movement has risen in India, swept through the country sympathetically and achieved the political enfranchisement of women in all the nine British Provinces and in four Indian States.

Three fundamental causes have led to this remarkable success: first, the deep veneration that is given by the Hindu and Muhammadan religions to the feminine aspect of life equally with the masculine as shown by the importance of goddesses, by the necessity for the presence of the wife at all ceremonies performed by a Brahman, by the idea of the sacred mystery of womanhood implied by the purdah, and by the general veneration of motherhood. Secondly, the time was psychological for a new era was the time was psychological, for a new era was beginning for the Indian people by the intro-duction of a Scheme of Reforms in Indian government which was planned to give a basis of representative government on a much extended scale. The door was being opened to tended scale. The door was being opened to complete Self-government but only men were being invited to enter through it, although women compose half the people of the country and it had been by the joint efforts of men and women that the agitation for reform in the government had been made. The men and women of India were too awakened and too women of India were too awakened and too just to allow this injustice to remain unredressed. Thirdly, the long and strenuous agitation for the vote by women in Britain and America and their recent victories had brought vividly to the consciousness of all educated Indian men and women the whole question of the inclusion of women in public life, and it was also a national and international necessity that Indian women should be given as high a status as women in other parts of the Empire.

Though the Municipal franchise had been granted to the women of the Bombay and indeed no protest was made when it was suddenly withdrawn from Madras women some years later. Over 1,700 women are qualified to vote for the Bombay Corporation and a tair to vote for the Bombay Corporation and a fair percentage of these have polled at each elec-tion, and similarly in other Municipalities in that Presidency women have exercised their vote responsibly and intelligently. Since 1922 over 100 women have become Municipal Councillors and members of Local Government Boards. Their appointment has chiefly been by nomination but there have been notable seats won by election in open contest with men, such as the election of all the four women who first entered the contest for seat in Bombay Corporation, also the instance in which the single Corporation, also the instance in which the single converges to a condestant in the Municipal elections in Lucknow secured the largest poil of any of the candidates. Many important local reforms have been secured by this large band of women been secured by this large band of women councillors, and every year sees a greater Scheme of Peforms, drawn up by him and Lord number of women serving on these local Councils. and Boards.

It was owing to the rise of the political agita-It was owing to the rise or the political agita-tion for Home Rule between 1914 and 1917 that women began to wake up to their position of exclusion by British law from any share in representative government. The internment of one of their own sex, Dr. Besant, stimulated political activity and political selfconsciousness amongst women to a very great extent. The moment for the ripe public expression of their feelings came when the Secretary of State for India came to India to investigate and study Indian affairs at first hand in 1917.

During the Hon. E. S. Montagu's visit only one Women's Deputation waited on him but it was representative of womanhood in all parts of India, and it brought to his notice the various reforms which women were specially desirous of recommending the Government to carry out.

The first claim for women suffrage for Indian women was made in the address presented to Mr. Montagu at this historic All-India Women's Deputation which watted upon him in Madras on the 18th December 1917. The section referring to enfranchisement merits full quotation:

"Our interests, as one half of the people, are directly affected by the demand in the united (Hindu-Muslim Reform) scheme (I. 3) that 'the Members of the Councilshould be elected directly Mombers of the Council should be elected directly by the people on as broad a franchise as possible, and in the Memorandum (3) that 'the manchise should be broadened and extended directly to the people.' We pray that, when such a franchise is being drawn up, women may be recognized as 'people,' and that it may be worded in such terms as will not disqualify our sex but allow our women the same concerning. sex, but allow our women the same opportunities of representation as our men. In agreeing with the demand of the abovementioned Memorandum that 'a full measure of Local Self-Government should be immediately granted, we request that it shall include the representation of our women, a policy that has been admittedly Madras Presidencies over lifteen years ago it successful for the past twenty years in Local was so limited in numbers that it did not make Self-Government elsewhere in the British Emiliary on the past twenty years in Local was so limited in numbers that it did not make Self-Government elsewhere in the British Emiliary pire. The precedent or including women in indeed no protest was made when it was sudrelative of the Indian National Congress, in which since its inception women have voted and been delegates and speakers, and which this year finds its climax in the election of a woman as its President. Thus the voice of India approves of its women being considered responsible and acknowledged citizens; and we urgently claim that, in the drawing up of all provisions regarding representation, our sex shall not be made a disqualification for the exercise of the franchise or for service in public life."

> The year 1918 was devoted to converting the Government forces to the justice and expediency of Indian Woman Suffrage, but this proved a more difficult matter. It was a disappointment first that though the Secretary of was published no mention of women was made

though the widening of the electorate was one of the reforms suggested. When the Southborough Franchise Committee was formed to investigate the suggestions regarding the franchise in this Scheme, the women suffragists took every means to bring to the notice of the Committee all the evidence which showed the need for, and the country's support of the inclusion of women in the new franchise.

After the introduction of the Government of India Bill into Parliament in July 1919, a number of Indian deputations proceeded to London to give evidence before the Joint Select Committee of Members of both Houses of Parliament which had been appointed to place the Reforms on a workable basis. Mrs. Annie Besant, Mrs. Sarojini Naidu and Mrs. and Miss Herabai Tata were the women who were heard by the Committee in support of the extension of the franchise to women in India.

The House of Commons decided that the question was one for Indians to answer for themselves and while retaining the sex disqualification in the Reform Bill they framed the Electoral Rules in such terms that if any Provincial Legislative Council should approve by a resolution in favour of women's franchise, women should be put on the electoral register of that Province. This was the only provision regarding franchise matters which might be changed before a 10 years' time limit. Until after that period women were incligible for election as Legislative Councillors.

Travancore, a very progressive Indian State, was the first to grant the Legislative vote to women at the close of 1920, and it was promptly followed by the Indian State of Jhalawar. In the first session of the Legislative Councils in 1921 it is gratifying to record that a motion was tabled by Dewan Bahadur Krishnan Nair of Malabar that he would bring forward a Resolution in the Madras Legislative Council to remove the disqualification of sex existing in regard to the Legislative Council franchise. During the month that must legally intervene between the tabling of a Woman Suffrage motion and its introduction for Debate the Madras women under the leadership of the Women's Indian Association carried on all forms of public propaganda and canvassed the important members of the Council. The Debate took place on April 1st and after a short discussion, in which it was evident that opposition came only from the Muhammadan members, the debate itself became only an accumulation of appreciation of womanhood and an expression of faith in its future. When the division was taken, it resulted in the resolution being carried by a majority of 34. Madras has thus the honour of being the first Province in British India to enfranchise its women, and it has done this ungrudgingly and unhesitatingly in the broad spirit of the equality of the sexes, as it grants the vote to women on the same terms as it has been granted to men. Dr. (Mrs.) Muthulakshmi Reddi, the first woman member of the British Indian Legislature, has been able to introduce legislation to do away with the Devadasi service in the Hindu temples and the immoral traffic in women and children. She has also devoted her attention to the development of the education of girls and to the promotion of the health of mothers and children.

Mr. Trived brought forward a Woman Suffrage Resolution in the Bombay Legislative Council during the same session, but some irregularity in its wording caused it to be pronounced out of order. In June that subject was tabled again and championed by Rao Saheb Hariliel Desaibhai Desai of Ahmedabad, Deputy President of the Council. As in Madras, the intervening month was filled with suffrage activity by the women of the Presidency and was remarkable for a large joint meeting of Bombay city women at which 19 Women's Societies took part, and tor a suffrage meeting of Marathi and Gujerati women in Poona when over 800 women showed the greatest enthusiasm for the movement.

The Bombay Council Debate on Woman Suffrage took three days and the subject was very fully discussed by over 40 members. The result was satisfactory to the suffragests, the voting being 52 in favour, 25 against and 12 neutral. Thus Madras and Bombay Presidencies gave the lead to the other Provinces. In September, 1922, Mr. S. M. Bose, in the Bengal Council, moved a Woman Suffrage Resolution, which was debated for three days but finally defeated by 56 to 37 votes, a bloc of 40 Muhammadan members voting solidly against it. In September 1925 the Bengal Council passed the Suffrage Resolution by a voto of 54 to 38.

Mr. Devaki Prasad Sinha's similar Resolution in the **Behar and Orissa** Legislative Council was defeated by only a 10 votes' majority.

These Debates proved so educational to their respective Provinces that the Bengal and Behar Provinces have since granted qualified women the Municipal Vote.

In February, 1923, a world suffrage record was made by the unantmous vote of the United Provinces Legislative Council in invour of Woman Suffrage.

In 1926 the **Punjab** granted woman suffrage without a division, and in 1926 the **Central Provinces**.

The new Reform Bill for Burma has included the grant of woman suffrage to the qualified Burmese women, and further made provision for their election as Councillors if the Council passes a Resolution desiring their admission and if that Resolution is approved of by the Governor.

In April, 1922, the Mysore Legislative Council unanimously passed the Woman Suffrage Resolution. The vote for the Representative Assembly of Mysore was granted to women in October, 1922. The vote for Mysore Legislative Franchise was granted to the Mysore women by H. H. The Maharaja and His Privy Council in June 1923. In October, 1924, Assam Provincial Council granted Woman Suffrago for its Province to pass a Resolution in favour of allowing women to enter the Council as members.

In 1929 soon after the All-India Women's Educational Reform was held in Patna, the Legislative Council of Behar and Orissa gave women the right of voting, election and nomination to the Council on the same terms as men. Thus the whole of British India has now

given to women equal political rights with men. The result has already demonstrated itself in the remarkable advancement of all the interests of women along the lines of education, health, housing, morality and social customs.

The Indian Native States of Travancors, Co-chin and Rajkot are the only places in India where the sex disqualification has been com-pletely removed from the statute book. These have allowed women the right to stand for election for the Legislative Council as well as the right to vote for it, and two women have been right to your for it, and two women have needed to the newly formed Representative Council of Rajkot. The year 1925 has been noteworthy for the appointment of the first woman Minister to Government. Mrs. Poonem Lukhose became a member of the Travancore Council for the Council for the Council for the Council for the c Luxinose became a memoer of the Travancore Legislative Council on taking the position of State Darbar Physician. She acted as Minister for Health to the State for three years. Cotchin State nominated Mrs. Madhavi Amma as a member of its first Legislative Council.

In British India by the terms of the Reform Bill the Councils had no power to alter the dis-qualification of sex which remains against the right to stand as candidates for election to the Councils. This could only be changed by the vote of the British Parliament; and the gaining of this right remained as a further objective of of this right remained as a further objective of the women suffragists. Many large, influential meetings were held claiming the right of women to entry of the Legislatures, A deputation of women about this subject waited on the Madras Governor and their claims were supported by him and by his Government. The Imperial Legislative Assembly and the Council of State had been accorded the power to grant women the franchise for their assemblies also by resolution, but only for those provinces which had already granted women the Legislative franchise. The Legislative Assembly has pass ed by a large majority a women the Legislative franchise. The Legislative Assembly has pass ed by a large majority a Resolution granting the Assembly franchise to the women of such Provinces. Accordingly in November 1923, women in India voted for the first time for the elections of both Provincial Legislative Councillors and members of the Legislative Assembly. The number of women who voted in the large cities was surprisingly large in Bombay and Madras Presidencies and

the Reform Bill which disqualined women arone entering the Legislatures. Power was granted to the Councils and the Assembly to pass Resolutions allowing qualified women to be elected or nominated as members of these bodies. Again Madras Council, on the 17th July, was the

came too late for women to stand for election with any great chance of success, so the Women's Indian Association asked that women be nominated by Government for the new Councils in those Provinces which had voted to admit them, and that women also be nominated to the Assembly and the Council of State. Thus the year 1926 marked another milestone passed on the road to the complete political emanci-pation of Indian womanhood.

In 1926 the Central Provinces, the Punjab and Bengal, all granted the Franchise to women. The year 1927 was notable for the nomination of the first woman member to a Legislative Council in British India, the recipient of the honour being Dr. MUTHULAKSHMI AMMAL, and she was further honoured by being elected unanimously by her colleagues in the Madras Legislative Council, to the Office of DEFUTY PRESIDENT OF THE COUNCIL. Since then Mrs. Hale has been nominated to the Legislative Council of the Central Provinces, and Mrs. Ahmed Shaw to that of the United Provinces. A Deputation from the All-India Women's Conference in Delhi in 1928 waited on the Vicercy requesting him to nominate two women to the Legislative Assembly. That has still remained ungranted.

The number of women enfranchised by the grant of the vote throughout India will not be more than a million under the present qualifications. Property and not literacy is the basis fications. Property and not literacy is the passs of the franchise, though the grant of the vote to every graduate of seven years' standing ensures that the best educated women of the country as well as those who have to shoulder the largest property responsibilities will be those who rightly will be the legislating influence on behalf of womanhood, As recervat the custom of nurtab prevailing in legislating influence on behalf of womanhood, As regards the custom of purdah prevailing in parts of India special provisions have been made in Municipal voting for purdah recording stations for purdah women in which a woman is returning officer and this has been found quite satisfactory and has been adopted also where desired in connection with Legislative Council elections.

Though the Women's Indian Association was the only Indian women's society which had almost all other women's organisations have combined in special efforts for the gaining of municipal and legislative rights and the recommendation of the Muddiman Committee on Franchise Reforms, the Rule was changed in the Reform Bill which disqualified women from the Legislative rights and the specially with the movement; Lady D. The Reform Bill which disqualified women from the Reform Bill which are the Reform Bill which Bill which Bill which Bill which Bill which Bill which specially with the movement: Lady D. Tata, Lady A. Bose, Lady T. Sadasivaier, the Begum of Cambay, Mrs. Ramabai Ranade, Mrs. Sarojini Naidu, Mrs. Jaji Jehangir Petit, Mrs. Tata, Mrs. Wadia, Mrs. Jinarajadasa, Dr. A. Besant, Mrs. M. E. Cousins, Mrs. Srirangamma, solutions allowing qualified women to be elected [A. Besant, Mrs. M. E. Cousins, Mrs. Strangamma, or nominated as members of these bodies, ims. Chandrasekhara Iyer, Miss S. Sorabji, Again Maéras Council, on the 17th July, was the first to pass a Resolution admitting women to take the moderation of the Councils and October respectively. This canabled women to become to become members of the Councils which have been functioning since then. But the permission Mrs. Rasschid, Mrs. van Gildemeester, stc.

# The School of Oriental Studies.

This School was established by Royal Charter in June 1916. The purposes of the School (as set out in the Charter) are to be a School of Oriental Studies in the University of London to give instruction in the Languages of Eastern and African peoples, Ancient and Modern, and in the Literature, History, Religion, Law, Customs and Art of those peoples, especially with a view to the needs of persons about to proceed to the East or to Africa for the pursuit of study and research, commerce or a profession, and to do all or any of such other things as the Governing Body of the School consider conductive or incidental thereto, having regard to the provision for those purposes which already exists elsewhere and in particular to the coordination of the work of the School with that of similar institutions both in Great Britain and in its Eastern and African Dominions and with the work of the University of London and its other Schools.

The School possesses noble and interesting buildings, in Finsbury Circus, provided by the British Government under the London Institution (Transfer) Act of 1912. The sum of £25,000 required for the alteration and extension of the buildings of the London Institution for the purposes of the School was voted by Parliament. The School buildings are quiet, although they are in the heart of the City. The School

provides teaching in more than seventy subjects. In a considerable proportion of the spoken languages instruction is given by teachers belonging to the countries where the languages are spoken, as it is the aim of the School to provide as far as possible both European and Oriental Lecturers in the principal languages included in the curriculum.

Courses on the History, Religions, and Customs of Oriental and African countries form a special feature in the teaching of the School. There is a whole time Professor in Phonetics, the classes for which are numerically larger than in any other subject. It is intended to record fully in phonetic symbols all the languages taught at the School.

Owing to the generosity of the Rockefeller Foundation a new sub-department under Professor Lloyd James has been opened for the teaching of and research into African Linguistics.

Courses are also provided in Indian Law and the History of India, and arrangements are made from time to time for special courses of lectures to be given by distinguished orientalists not on the staff.

#### PROVING OF WILLS.

In British India if a person has been appointed executor of the will of a deceased person, it is always advisable to prove the will as early as possible. If the will is in a vernacular it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. The values of immovable properties are usually assessed at 16½ years purchase on the nett Municipal assessment. For estate under Rs. 1,000 no probate duty is payable; up to Rs. 9,000 in excess of first Rs. 1,000 the duty is at 2%, between Rs. 10,000 and Rs. 50,000 the duty payable is at 3% and botween Rs. 50,000 and 1,0000 the duty payable is at 4% and over Rs. 1,00,000 the duty payable is at 5%. In determining the amount of the value of the estats for the purposes of probate duty the following items are allowed to be deducted:

 Debts left by the deceased including mortgage encumbrances.

- The amount of funeral expenses.
- Property held by the deceased in trust and not beneficially or with general power to confer a beneficial interest.

The particulars of all these items have to be stated in a separate schedule. It is the practice of the High Court to send a copy of these schedules to the Revenue authorities and if the properties particularly immovable properties have not been properly valued, the kevenue department require the petition to be amended accordingly. In certain cases the Court then requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no objection is lodged by any person so interested within 14 days after the publication or service of citation and if the will is shown to have been properly executed and the petitioner entitled to probate, probate is ordered to be granted.

# The Fisheries of India.

The fisheries of India, potentially rich, as appears that the general conditions of the yet yield a mere fraction of what they could industry are such that the inkiative must were they exploited in a fashion comparable with those of Europe, North America or Japan.

uplift and education of the fishing community The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh, from the growing population of the great cities within reach of the scaboard. The caste system, however, exerts a blighting influence on progress. Fishing and fish trade are universally relegated to low caste men who alike from ly relegated to low caste men who alike from their want of education, the isolation caused by their work and caste and their extreme conservatism, are among the most ignorant, suspicious and prejudiced of the population, extremely averse to amending the methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods even when conthe adoption of new methods, even when con-vinced of their value. Higher caste capitalists have hitherto fought shy of associating with the low caste fishermen, and except in large operations on new lines, these capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it

and in the introduction and testing of new and improved apparatus and methods.

The first local Government to lead the way was that of Madras, which in 1905 initiated an investigation of the industry, both marine and fresh-water, appointing Sir F. A. Nicholson to supervise operations. Bengal followed suit in 1906, and from these beginnings have aprung the local Fisheries Departments of Madras, Bengal, and Bihar and Orissa. Bombay, the remaining seaboard province, has comparatively small fresh-water interests compared with Madras and Bengal and as it happens that her marine fisheries are favoured with good harbours and the most enterprising race of fishermen in India, there was less urgent need for State help in the industry. Fisheries there were a subject of Government solicitude for five years after the war but they finally ceased to receive any attention after the aboli-tion in 1924 of the short lived Department of Industries to which this subject was allotted.

#### Madras.

The Madras coast line of 1,750 miles is margined by a shallow-water area within the 100 fathom line of 40,000 square miles outside of the mere fringe inshore, this vast expanse of fishable water lies idle and unproductive. The surf-swept East coast is singularly deficient in harbours whereon fishing fleets can be based, and so from Ganjam to Negapatam, the unsinkable catamaran, composed of logs tied side by side is the only possible casy-going fishing craft, Its limitations circumscribe the fishing power of its owners and consequently these men are poor and the produce of their best efforts meagre compared with what it would be if better and larger boats were available and possible. The West coast is more favoured From September till April weather conditions are good enough to permit even dugout canoes to fish dally. No difficulty is found in beaching canoes and boats throughout this season. The fishing population is a large one. In the census taken by the Department of Fisheries in 1927-28, the fisher-population on the West coast totalled 114,502. The esteemed table fish of the coast consist of the Seer (Cybium or

fish (Trichiurus), Goggles (Caranx crumen-opthalmus) and Silver bellies (Equula and Cazza) take precedence of the former. Sardine and Mackerel over-shadow all others. So greatly in excess of rood requirements are the catches of sardines, that every year large quantities are turned into oil and manure. Fishing outside the 5 fathom line is little in evidence save by Bombay boats (Rathagiri) which are engaged in drift netting for bonito, seer and other medium-sized fishes. These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres: the material is largely cured for export.

The Madras Department of Fisheries. As Government attention has been given in Madras over a longer period to the improve-ment of fisheries, and a larger staff concentrated upon the problems involved than elsewhere this Presidency has now the proud position of knowing that her fisheries and collateral indus-tries are better organised and more progressive than those in other provinces. The credit for the wonderful success which has been achieved fish of the coast consist of the Secr (Cybium or Scomberomorous), Pomfret (Apolectus and Stromateus) several large species of Horse Mackerel (Caranx). Jew fish (Scuanidae), Whiting (Caranx) Thread-fins (Polynemus), Sardines (Cilupea) and Mackerel (Scomber). In economic importance, however, shopling fish and fish or inferior quality such as Sardine (Clupea). Mackerel (Scomber), Cat fish (Arius), Ribbon was given by the creation of a fisheries bureau

and this in turn has developed into a separate Department of Government which till August Department of Government which till August 1923 was being administered by Mr. James Hornell, F.L.S., as Director and, is now controlled by his successor Dr. B. Sundars Ray, M.A., Ph.D. The activities of the Department have greatly expanded since its inception. A Committee constituted by Government to enquire into the working of the Department and make recommendations for its future development have just published their report in two volumes. The Evidence collected by the Committee is an octavo volume of 431 pages the Committee is an octavo volume of 481 pages and the Report of the Committee is another similar volume of 264 pages. The Report is a remarkable production which summarises the aims and achievements of the Department during the last quarter of a century and contains detailed proposals for the expansion of the Department activities in different directions. The whole work of the Department has received a great impetus as a result of the report of this Committee. The Committee have emphasised the true purpose and aim of a technical Department of Fisheries to be essentially the material amelioration of the lot of the sea-going fishermen. The activities of the sea-going fishermen. The activities of the past 25 years were largely concerned with curing and canning, manufacture of oil and guano and safe-guarding of Government revenue. Remarkably successful as they were under the able guidance of Sir Frederick Nicholson, they seemed somewhat to obscure what should be the primary object and policy of the Department. Technological improvements in curing and canning and allied industries should follow ultimately in the wake of improved catches. ultimately in the wake of improved catches. Socio-economic and humanitarian endeavours however necessary and important, in view of the caste system of India, could not directly add one fish to the actual catch of the fisherman. The Committee have therefore urged that efforts to improve the professional knowledge of the ace-going fishermen and the catching powers of his craft and tackle which were inaugurated with the inquisition of the trawler in 1926 must necessarily occupy the first place of the departmental programme. The higher staff now consists of five Assistant Directors and an consists or five Assistant Directors and an Assistant Biologist. These are respectively in charge of (1) the chank and beche-de-mer fisheries; (b) the co-operative and educational work and the West coast fish curing yards; (c) inland piscleulture; (d) deep sea fishing; (e) propaganda for rural piscleulture; and (f) biological investigations and fishery research. Dertain other officers have charge respectively of sections dealing with technological research, trout fisheries and the fisheries of the Northern Circars. A special staff of officers trained in go-operation have been appointed for intensive work among fishermen. The miscellaneous institutions controlled by the Department consist of a small demonstration cannery a research station for ouring, canning and allied industries, a Fisheries Training Institute at Calient for imparting special training to teachers selected to teach in schools for fisher. saddlers of which there were 43 with a total of 3,637 pupils in 1930. All the public fish ouring yards which were under the control of the Salt and Abkari Department till 1924 have passed into the charge of the Fisheries Department.

It is now possible to introduce the better methods of cure and improved hygiene which the Department has been straining to popularise, in all the yards. Due to the transfer of the yards, the Fisherles Department has a large ramified staff of yard officers (Salt Sub-Inspectors, Petty Yard Officers and Peons) in almost every large fishing village on the coast. Besides the direct work of issuing salt for curing, the Department sets itself to train these officers into expert advisers in curing methods and marketing fish, social workers for the inculcation of thrift, co-operative and progressive ideas and new industries and lastly as trained observers for recording and reporting on various biological questions connected with fish and fisheries and collecting statistics regarding the value and quantity of sea fish caught and landed. Statistics have been published since 1925-26 regularly every year in the bulletins,

The activities of the Department are so varied and far-reaching that it is difficult even to enumerate them in the space available, much less to give details. So far its most notable industrial successes have been the reform of manufacturing processes in the fish-oil trade, the creation of a fish guano industry and the opening of an oyster farm conducted under hygienic conditions. Twenty-four volumes have been issued to date and the twenty-fifth volume in Press. All this work has been carried on under serious handleap for want of adequate staff and equipment.

The educational work of the Department is becoming one of its most important branches whether it be specially training teachers for schools in fishing villages or training men in the technology of curing, canning and oil manufacture, in co-operative propaganda and in the supply of zoological specimens for the use of college classes and museums. The last named has filled a long-felt want and is contributing materially to the advancement of the study of Zoology throughout India. There is now no need to obtain specimens from Europe as they can be had from the Research Assistant, Fisheries Station, Ennur, Madras, at moderate prices,

Fish Curing.—Fish curing is practised extensively everywhere on the Madras coasts: its present success is due primarily to Dr. Francis Day who after an investigation during 1869-71 of the fisheries of the whole of India, pressed for the grant to fishermen of duty-free salt for curing purposes within fenced enclosures. He advocated much else, but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increasing number of yards or bonded enclosures were opened at which salt is issued free of duty and often at rates below the local cost of the salt to Government. At present about 115 of such yards are scattered along the coast and over 55,000 tons of wet fish are annually cured therein. The total receipts on the administration of these yards for the year 1980-31 was Rs. 1,97,777-0-4 and expended to use the Rs. 2,85,913-12-4.

Pearl and Chank Pisheries.—In the absence of the pearl fishery during the year, the clank fisheries prospered. An unprecedented number of 467,628 chanks were fished yielding a gross revenue of Rs. 17,860-8-8.

The Inland Fisheries.—The Inland Fisheries of Madras compare unfavourably with those of Bengal. Many of the rivers dry up in the hot season and few of the many thousands of irrigation tanks throughout the province hold water for more than 6 to 9 months. As a consequence, inland fisheries are badly organised and few men devote themselves to fishing as their sole or even main occupation. isining as their sole or even main occupation. The custom is to neglect or ignore the flahery value of these streams and tanks so long as they are full of water: only when the streams shrink to pools and the tanks to puddles do the owners or lesses of the fishing rights turn out to catch fish. The result is a dearth of fish throughout the greater part of the year, a glut for a few days, and often much waste in consequence. The chief fresh water fishes of economic importance are the Murrel, notable for its virtue of living for a considerable period out of water, and various carps including Labeo, Catla and the well-known favourite of sportsman in India the "Mahseer," Cat-fishes and Hilsa. In the Nilgiris, the Rainbow Trout has been acclimatised and thrives well. The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalence where countries of few are hatcher at Avalanche, where quantities of fry are hatched and reared for the replenishment of the streams of the plateau, Fishing rights in the large irrigation tanks were transferred from Government to local authorities many years ago; these tanks are now being reacquired by Governthese tanks are now being reacquired by Government in order that they may be stocked periodically by the Department; the results so far have shown a profit on the operations. To breed the necessary fry, 7 fish farms are in operation. In these the chief fish bred are the Gourami, obtained from Java, and Etroplus suratensis which has the excellent attribute of thriving and breeding as well in brackish as thriving and breeding as well in brackish as in fresh water; both protect their eggs while developing, a useful habit. Both the Gourami and Etroplus are largely vegetarian in diet. A further activity is represented by the breeding of small fishes especially addicted to feed upon the aquatic larvae of mosquitoes. These are supplied in thousands to municipalities and other local authorities at a nominal price, for introduction into mesquito-haunted sheets of water; these anti-malarial operations have proved successful in the places where the local authorities have given proper attention to the direction given.

Marine Aquarium.—Perhaps a word is necessary about this institution at Madras. The building was constructed under the auspices of the Superintendent, Government Museum, Madras, and was thrown open to the public on 21st October 1909. The Superintendent, Government Museum, had charge of the Aquarium for ten Years till 1919 when it was transferred to the Department of Fisheries. Ever since its opening, being the first institution of its kind in Asia, it has been immensely popular with the public.

A turtle tank of rough semi-circular shape with 21 feet as diameter was added during the course of the year.

Deep Sea Fishing and Research.—The faherman has a fairly exhaustive knowledge of the fisheries along the coast up to 7 fathoms, If the catches of fish are to be improved it is necessary to ascertain.

- (1) what kinds and quantities of fish are available beyond 7 fathoms; and,
- (2) how to exploit these deep sea fisheries economically.

The department's trawler "Lady Goschen" has been exploring the off shore belt of the sea up to 100 tathoms from Point Calimere to Madras on the East Coast and Calicut to Pigeon Islands on the West Coast, with a view to ascertain the kinds and quantities of fish available there. The Assistant Biologist and staff worked on board the trawler. One remarkable discovery made by this systematic survey is that fish of better quality and in larger quantity are available in deeper waters on the East coast from Point Calimere to Madras than on the West coast from Calicut to Pigeon Islands, during the months of the survey. Whether it is the case throughout the year is yet to be ascertained. However it has helped to revise the general belief that fish are much more abundant on the West coast than on the East coast, and opens up possibilities for large fishery developments on the East Coast which will ultimately increase the supply of fish food and fish manure.

Rural Pisciculture.—As a result of the recommendation of the Royal Commission on Agriculture that all practical measures should be adopted to add fish to the diet of the oultivator thereby improving his nutrition, a scheme of rural propaganda was inaugurated in 1930. An Assistant Director with necessary star was appointed to advise ryots in the stocking of village ponds which number over 106,050 in the Presidency. The work though begun in July 1930, has already completed a survey of ponds in 98 villages, 2,172 wells and 264 ponds in these villages were examined and out of this number 175 wells and 85 ponds were selected as suitable for piscicultural operations and 45 wells and 1 pond were stocked.

Welfare Work.—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. On Sir Frederick Nioholson's initiative, the Department has always recognised the duty of spreading among them education and the habits of thrift, temperance and co-operation. The work has been specially successful on the West Coast. The number of fishermen's co-operative societies in 1930-31 was 73.

The need for special efforts to promote co-operation among fisherfolk and to renew and stimulate co-operative societies to more efficient work has been recognised by Government for some years. The Committee on Fisheries recommended that all co-operative work among fishermen both on the West and East Coasts in the Presi628 Fisheries.

dency should be done by the Fisherles Department and that, on the analogy of the system in vogue in the Labour Department, the staff of Inspectors of Co-operative Societies should work under the Fisheries Department, the Co-operative supplying trained Inspectors and auditing the books of the societies. The Government partially accepted the recommendations and sanctioned the deputation of 3 Inspectors of Co-operative Societies for exclusive work among fishermen under the department.

Two industrial societies were started one at Blangad and the other at Planpatty on the West Coast in 1927 with the object of wearing the fishermen gradually from the influence of middlemon capitalists. The Government sanctioned a loan of Rs. 1,500 each to the two societies

for purchasing boats, nets and other accessories for fishing purposes. They are working since 1927 with varying degrees of success. To promote the education of fishermen a training institution was opened in the middle

To promote the education of fishermen a training institution was opened in the middle of 1918 at Calcut to train teachers to work in elementary schools for the fisherfolk. The pupil teachers under training are familiarised with the work carried on in the fishery stations at Tanur and Chaliyam. They are given practical instructions in fishing, a boat having been purchased for the purpose. In some places the villagers themselves started the schools and then handed over to the Departments. In other places schools were opened by the Department at the request of the fishermen Local men are appointed as honorary manager of schools.

## Bengal & Bihar & Orissa.

The fishing value of this extensive deltaic; region lies primarily in the enormous area occupled by inland waters—rivers, creeks, jheels, and swamps,—to-say nothing of paddy fields and tanks. These swarm with fish and, as the Ilindu population are free to a large extent from the population are free to a large extent from the aversion to a fish-diet which is widely prevalent among the better castes in the south. the demand for fish is enormous. Rice and fish are indeed the principal mainstays of the population and not less than 80 per cent. of the population and not less than 80 per cent. of diet. It is calculated that 1.6 per cent. of the remulation is engaged in fishing and its connectipopulation is engaged in fishing and its connected trades, a percentage that rises to 2.6 in the Presidency, Rajshahi, and Dacea Divisions. 644,000 persons in Bengal subsist by fishing with 824,000 maintained by the sale of fish, and this in spite of the fact that fishing is not considered an honourable profession. As a fresh-water fisherman the Bongali is most ingenious, his traps and other devices exceedingly ciever and effective—in many cases too effective—so eager is he for immediate profit, however meagre this may be. The greatest inland fishery is that of the hilsa (Clupea clisha) which annually migrates from the sea in innumerable multitudes to seek spawning grounds far up the branches of the Ganges and the other great civers. Other valued and abundant fishes are the rohu (Labeo rohita) and the katia (Catia saila), mrigela (Cirrit uan nsigeta); prawns and shrimps abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread rivers and in the great network of creeks spread fibroughout the Sunderbens, the bekt (Lats calcrifer) and the mullets are the most setemed; apart from these estuarine fish the most valuable sea-fishes are the mango-fishes (Polynemus,) pomírets. The sea-fishertes are as yet little exploited, the fishermen of Orissa, where alone coastal fishing is of any local importance, having no sea creft save local importance, having no sea-craft save catamarans of inferior design and construction.

Following the inquiry begun in 1906 by Sir from this, much can be done by its K. G. Gupta, an investigation of the steam officers for the uplift of the general fishing trawl potentialities of the head of the Bay of Bengal was undertaken, the trawier Golden tyranny of the mahajans (fish contractors and

Crown being employed for the purpose. The results showed that there are extensive area suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons, the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender, the experiment was financially a failure and was dropped. With ever-increasing de-mand for fish in Calcutta and the concurrent mand for nsh in Calcutta and the concurrent rise in prices, the prospects of remunerative steam-trawling are now much more, steam-trawling companies being floated in the immediate future. The trade is a difficult one to organize and without a rare combination of technical fishery knowledge and far-sighted and comprehensive organization the danger run by the investing public will be considerable. Originally one Fisheries Department served the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected in after which fisheries in Bengal were administered by the Director of Agriculture. The Bengal Fishery Department was abolished under retrenchment in 1923. There is no immediate prospect of reconstitution of the Department. In Bihar and Orissa, Fisheries form a section of the Department of Industries.

Bengal Fisheries Department has of necessity a more limited scope for its activities than in the case of Madras. Practically no coastal minor industries exist, neither do the natural conditions lead us to suppose that any can be created without extreme difficulty, and in the absence of a great trawl industry which alone might be able to call into existence factories devoted to the uplift of the general utilization of fish bye-products. Apart from this, much can be done by its officers for the uplift of the general fishing population with a view to free them from the tyranny of the mahayans (fish contractors and

middle men) and enable them to put more capital into their business and to conduct it co-operatively. This is necessarily extremely slow operatively. This is necessarily extremely slow work, but a beginning has been made and a number of fishermen's co-operative societies have been formed. Their example is calculated The fishery wealth of Bengal is enormous and nothing but good can come out of intensive investigation and propaganda.

Fresh-water mussels are used extensively at Dates in the manufacture of cheap pearl buttons and in many cases pearls also are found in the manufacture of cheap pearls also are found in the manufacture matter. in the mussels which the pear dealers gather and sell in the various parts of India. The Dacca bangle factories carry on an important local industry of very ancient standing; their material is almost entirely obtained from the South Indian and Ceylon chank fisheries already alluded to.

## Bombay.

Whereas Bengal's fisheries are at present confined principally to inland waters, those of Bombay are concerned, save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line appropriate with explaint the coast line and the control of the sea. abounding with excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay sea-fisheries are of very great importance financially as well as economically and, there is ample scope for most useful work in improving curing methods, in introducing canning and in the development of minor marine industries particularly those connected with the utilization of bye-products.

The Director of Industries administered the The Director of Industries administered the subject of "Fisheries" from 1918 and had for a time two officers in the Department engaged upon fishery investigation and development. A steam trawier was bought for work in Bombay waters in 1920 and began work in May 1921 off Bombay. The experiment continued until February 1922, and the trawier was subsequently sold to the Government of Burma. At the outset the results ment of Burma. At the outset the results seemed promising, but the experiment as a whole showed that the cost of maintaining a trawler of the type used could not be met by sales of fish at current market rates. Cold storage has since been installed at the principal fish market in Bombay, but for a trawler special facilities are needed also for rapid coaling, supplying ice and stores, and for unloading catches. More than this a change is needed in the medizeval conditions under which the local fish market is conducted and there is much to be done in popularising little known species of edible fish, such as karel, palu, tambusa, and particularly the ray or skate which formed on the average 25 per cent. Of the total catch but which is so little esteemed locally that it sold on the average at the rate of 100 lbs, for a rupec.

Vast strides have been made in the Bombay fishing industry in the course of the past five years, the two latter years of which will always remain an eventful date in its history. This progressis in a large measure due to the awakening among the fishermen, who are traditionally a conservative people, and the introduction of reforms among them is a very gradual process, as strongly ingrained prejudices and customs have to be overcome.

No survey of the fishing industry in the Bombay Presidency in recent years can be complete without a reference to Mr. H. T. Sorley's valuable report on the Marine Fisheries of the Bombay Piesidency, published in 1933. The volume is a stojehouse of information bearing on the Presidency's fishing industry and the fish trade in general, and contains numerous useful suggestions by the adoption of which the prospects of the fish trade of the Presidency may be improved.

Mr. Sorley has observed that the industry is neither expanding nor declining and that the supply of fish discloses no signs of diminution Elaborating this view he proceeds to point out that the fishermen are healthy and moderately prosperous in comparison with others belonging to a similar social Itratum.

Mr Sorley's more important recommendations are .-

- 1 The establishment of a marine aquarium in Bombay and Karachi, it they are able to pay their way as the Madras amarium does.
- 2. The establishment of a bureau of fisheries intormation.
- The advisability of the transfer of the fish curing yards to the control of the Local Government, and
- 4. The encouragement by the Bombay University of marine biological research.

Mr. Sorley in the course of his report also reterred to the value of employing fast motor launches to transport fish to the consuming centres in Bombay from the catching sites.

New Era Started .- A move in the above direction was made towards the end of the year 1933, when the Government of Bombay launched an experiment implementing in some ways the above suggestions. The experiment was formally mangurated by Sir Frederick Sykes, the then Governor of Bombay at Danda. The experiment was undertaken in co-operation with the head of the fishing community at Landa. For the purpose of the experiment a launch was obtained on loan from the Royal Indian Navy (then the R I. M.) and suitable alterations were made on it to adapt it to the purpose of a carrier possible aroused the interest of the fishermen, who realised the benefit to their trade of using fast motor transport to bring the fish to Bombay from the catching fields.

Hacouraged by the results, Government placed in 1934 an order for the construction of two launches with a local firm. The new launches eliminate the various defects revealed by the working of the original boat. One of them, the new 'Lady Sykes' is equipped with a 28.5 B.H.P. Gardener engine and the other with a 38 B.H.P. Ruston Lister engine capable of average speeds of 7 and 8 knots respectively. The total length of each launch is 35 feet, breadth being 10 feet and depth 4 feet 9 inches. Both the launches are equipped with life-buoys, life jackets, fire extinguishers and the usual navigation lights. Both boats burn crude oil. The latter launch has been bought on the hire purchase system by the head of the fishing community referred to above. The boats were put into commission in September and October 1934, respectively, ever since when they have been working satisfactorily. Their greater knottage and bigger storage capacity have induced the fishermen to put out to areas hitherto untapped for the purpose of supplying fish to the Bombay market. Both the launches have performed trips as far as Malvan, a town on the Konkan coast, about 180 miles from Bombay. The launches have thus brought large and rich fishing fields within casy reach of Bombay markets. This fish hitherto usually found its way to the fish curing yards, where it was dried and cured with salt. The operation of these launches at such a distant site makes it possible to furnish the Bombay market with a more regular and steady supply of fish than hitherto. The working of these launches has made it possible for Bombay to have an abundant supply of mackeral, a fish of immense food value and always relished. Until the introduction of the launches this fish was available only in very meagre quantities.

Fishermen who till now had felt that the provision of motor transport was beyond their scope are increasingly realising, after inquiry and inspection of the launches now running, that motor launches will play an important part in their trade in the future, and their more extended use will be the basis fo any scheme for the improvement of their prospects. A spirit of enterprise is already abroad among the fishermen and some foresighted individuals encouraged by the success of the Bombay Government's experiment are now embarking upon the purchase of launches.

Incidentally it may be stated that the Department of Industries has already examined the possibility from the engineering point of view, of converting ordinary sail boats into vessels capable of propulsion by diesel engines. That this is feasible is evident from the experiment of the Burma Shell Oil Co., which successfully installed at 10 B.H.P. diesel engine on an ordinary sailing craft measuring 24 feet in length. The boat has been in operation since September 1938. She has made several trips to distant fishing sites. Her running has been very satisfactory.

A unique feature of the Bonibay Government's fisheries scheme is the provision made to train youths of the fishing community in the running and maintenance of motor launches with the ultimate object that they may eventually be able to take charge of their own launches whenever they decide to go in for these on an extensive scale. The benefit of fishermen is the paramount consideration kept in the forefront of the whole scheme, which aims at confining the entire fishing trade to the fishing community itself and eliminating the need of employing technical hands who are not fishermen by either caste or vocation.

Lastly a fisheries information bureau has also been set up. The function of this bureau will be to collate and supply information connected with the local and other fisheries. The information collected by the bureau will be useful to the fishing industry, as it will furnish information not now available to them.

The fishermen working on the marine fisheries of the Bombay Presidency number about 36,000 according to the statistics of the census held in 1931. The figure does not include, however, men working in fresh waters. Arnalla-Revdanda and Bankot—Redi areas furnish by far the bulk of the Presidency's catch. The total tonnage of fish caught in the Bombay Presidency including Sind is slightly over 55,000 tons, the average value per ton of fish caught for the whole Presidency estimated on a basis of Rs. 5.45 per maund being equivalent to Rs. 146 per ton. The annual catch per fishermen estimated at 1.55 tons is much lower than the Madras figure for the Malabar coast, where the catch per fishermen averages about 7 tons. The value, however, per ton in the Bombay Presidency, viz. Rs. 4.45 per maund, is much greater than Madras value, namely Rs. 1-5-4 per maund.

Bombay City's annual consumption of fresh fish averages about 10,000 mds, 9,000 mds, of which are obtained from sites not more than 30 miles distant and brought to Bombay mostly by ordinary sail boats. Apart from fishing boats fish is also brought to the city by trains from stations on the B. B. &. C. I. Railway, besides by steamers from Karachi. Any increase in the present quantity of the supply of fish in the Bombay market is sure to be absorbed. Statistics of the consumption of fish in other large centres are not available.

The various types of fish brought to the fish curing yards in the Bombay Presidency annually average about 200,000 mds. for curing which 70,000 mds. of salt are usually issued. Experience has shown that dry cured fish lasts longer and in a sounder condition than wet cured fish. Most of the former is disposed of above the ghats. Wet cured fish, it has been sald, commands scarcely any sale in the Bombay Presidency, but is appreciated by inhabitants of certain parts of the Madras Presidency and Ceylon. Mr. Sorley has expressed the opinion that if an improvement can be effected in the methods of curing, the resultant product could be more greatly popularised and reach a wider market.

This takes one to the question of starting a also by rail sometimes from Diu, which is about flah canning industry, which does not exist in the Bombay Presidency, although the quantity which, as already stated, is about 180 miles to the start of such an enterprise. The most regular daily steamer service to the latter suitable site for embarking on a canning concern would be in the neighbourhood of Ratnagiri where fish occur in large shoals.

Experiments in canning conducted some years back by the Baroda Government at one of the chief fishing centres on the Southern Kathiawar coast and already yielded valuable and encourag-ing results particularly with regard to pomfrets.

The more important sha-fish are pomfrets, sole and sea-perches among which are included the valuable Jew-fishes (Sciena spp.) often attaining a very large size and notable as the chief source of "fish-maws" or " sounds." largely exported from Bombay for eventual manufacture into isinglass. The finest of Bombay fighting boats hall from the coast between bay fishing boats hall from the coast between bay fishing coats nail from the coast perween Bassein and Surat. These boats are beautifully constructed, attain a considerable size, and are capable of keeping the sea for weeks together. In the season they fish principally off the Kutch and Kathlawar coasts and in the mouth of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets, which are left down for several hours and hauled at the turn of the tide. The chief catches are bombil (Bombay ducks), pomfrets catches are bombil (Bombay ducks), pomírets and jew-fishes. The first named are dried in the sun after being strung through the mouth upon lines stretched between upright posts. South of Bombay the fishermen of Ratnagri; and Rajapur make use of another and lighter class of fishing boat, specially designed for use in drift-net fishing. Fine hauls of bonito seer (a large form of mackerel) and allied fishes are often made during the season from Sentember 2. (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and ray fish. For the latter specially large and powerful nets are employed. For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which shows how large they run in size.

The provision of cold storage facilities in Bombay marks a new departure in the marketing of perishable products and commodities and is a sign that the Indian capitalist is developing a greater interest in fish than heretofore. These facilities have been mainly designed with a view to making a large supply of fish available in the Bombay market.

In Sind considerable sea-fishing is carried on in the neighbourhood of Karachi chiefly for large and coarse fish, such as soormal, shark, rays and jow-fishes. In order to prevent destructive exploitation of cyster beds the plucking of cyster is confined to licensed fishermen and is oyster is confined to licensed fishermen and is imited to a few months of the cold weather. The demand for oysters for edible purposes is considerable, but although many seed pearls are procurable it does not pay to work the beds for these purposes and the export of such seed pearls to China for use in medicine ceased many years ago. Considerable fisheries exist in the River Indus, chlefly for the fish known as palls, which are annually leased out by Government for about Rs. 20,000.

The existence of small pearl fisheries almost within Bombay city itself, will come as a sur-prise to many. The fisheries dot Bombay City scaface on its south-western and north; eastern sides. Apart from these two sites, pearl oyster fisheries are also to be found at Thana, a suburb of Bombay about 20 miles away, and at various places in the Kolaba district, facing Bombay on the eastern side of the harbour. Bombay on the eastern side of the harbour. The south-western site in Bombay City where the pearl fisheries have been recently discovered is situated in blocks Nos, 3 to 7 of the Back Bay reclamation scheme. Pearl beds are also found in the Karachi harbour. These pearls are produced by the window pane cyster, but the pearls, apart from being limited in numbers, are of indifferent quality.

The revenue derived from the various pearl The revenue derived from the various pears fisheries is meagre. They are not leased out regularly every year, but only when a sufficient number of pearl oysters subsist on the beds,

Bombay Presidency's resources in respect of edible oysters are very limited. There are few places suited to the cultivation of oyster new places suited to the cultivation of oyster particularly certain areas in Sind and some sites in the Ratnagiri and Kanara districts. The best oysters by far are derived from the Sind oyster beds. Oysters found elsewhere in the Presidency are generally small and undersized.

A local firm has installed a plant for the quick freezing of fish. Special insulated boxes have been provided by enterprising firms for transporting fish. These boxes are lined with cork and zinc and provide an effective insulated medium against heat.

Two smaller plants, each with a capacity of 10 tons, have been installed at Malvan and Veraval, where large shoals of fish are found. The fish is frozen on the spot and exported to Bombay by steamers of the B. S. N. Co., and

### Burma.

Fresh, dried and salted fish and fish paste are consumed by Burmese people. The value of fish imported from foreign countries (chicfly from Straits Settlements) was 9.83 lakhs in 1982-83. The exclusive right of fishing throughout the province of Burma belongs by custom of the country to Government, and the Burma Fisheries Act provides for the protection of this right and for conceding the enjoyment of it to the people subject to certain restrictions for the conservation of the fish.

Revenue.—The economic value industry or tract of country can, to some extent, be gauged by the revenue it yields. The fisheries yielded a substantial revenue (about 43.62 lakhs per annum during the last decennum) and therefore they are one of the most important sources of national wealth. The demand declined to sixty per cent. of this amount in the year 1933-34 owing to trade and economic depression. Some open lakes, pools of water and small rivers are classed as leaseable fisheries and are leased by Government to the highest and best bidders at public auction for periods varying from one to five years. The total number of leaseable fisheries in the province is 3,554 of which 1,679 lie in the Irrawaddy Division, and 700 in Maubin—one of the five districts in that division.

The Delta consists of a series of saucer-shaped islands, many of which have embankments round the greater part of them along the northeast and west; in the hollows of these islands most of the fish come into spawn, and with the floods which overflow the embankment during October the young try come down-country from Upper Burma.

Licenses for fishing in all open fisheries are issued annually to persons who pay the pres-cribed tees for the specified classes of fishing implements. The greatest revenue from licenses comes from Mergui District where not only is the Pearling industry carried on, but leases for collecting green snails and sea slugs are issued.

The principal kinds of fish caught in nets on the sea-coast are (1) Kakkuyan, (2) Kathabaung, (3) Kathahmyin and (4) Kabalu. These are generally made into salt fish The creek and tresh water fish from fisheries are generally ngakhu, mayan and ngagn. Most of them are sold tresh, but some are converted into salt fish. The fish caught in the rivers are generally ngathalauk. Ngagun and Ngamunyun. Kakalaung and Ngaponna which are tound in small quantities elsewhere in India are sold in abundance in the Rangoon market.

## The Punjab.

The catches of the fishermen were generally below average except in the Kangia District and in the Deg in Sheikhupita where they were satisfactory. The fish in Rivers and streams were washed down by heavy floods in the end of September 1933 and the catches of fishermen were poor during the winter months. There has been a heavy mortality among fish in the Sohan stream in the Rawalpindi District annually during the last 3 or 4 years. This has senously affected the fishing in that water. Efforts are being made to find out the cause of this mortality and as soon as it is determined, any possible remedial measures will be adopted,

During the year 1933-34 there was no marked change in the operations of the Fisheries Branch of fishing in the operations of the Fisheries Branch of fishing leenses issued rose from 6.917 in the against 141 in the last year. The weither was previous year to 7,192 during the year 1933-34. in good condition, affording good sport and catches both to anglers and to the netsmen. Brown Trout—cultural experiments were successful in Kulu, but there was a heavy mortality among Rambow Tront ova, the cause of which is under investigation. The carp spawned at Chhenawan on the 17th July, 1933, but numerous eggs were washed away by the heavy floods and lost as large-meshed screens had to be used at the outlet to prevent a heading up of water. Larviedal fish are flourishing and spawning at the Chlenawan Fish Tanks from where these were sent to four different places tor the control of malaria.

## Travancore.

This State has a filiated fisheries to the Department of Agriculture and with the help of two officers trained in Madras and another officer trained in Japan, the Department has already accomplished a notable amount of development work. Special attention has been given to the regulation of fisheries in backwaters,

among the fishing community and to the introduction of improved methods of sardine oil and guano production. Useful work has been done by one of the officers in elucidating the life-histories of the more valuable food fishes and prawns. Improved methods of curing fish are being introduced. Special Schools have to the establishment of co-operative societies been opened for the education of fisher lads.

## The Forests

Even in the earliest days of the British occupation the destruction of the forests in many parts of India indicated the necessity for a parts of India indicated the necessity for a strong forest policy, but whether or not our earlier administrators realized the importance of the forests to the physical and economic welfare of the country, the fact remains that little or nothing was done. The year 1855 marked the commencement of a new era in the history of forestry in India, for it was then that Lord Dalhousie laid down a definite and far-supthed forest policy Eurther far-sighted forest policy. Further progress was delayed for a time by the Mutiny, but from 1860 onwards forest organization was rapidly extended to the other provinces. The earlier years of forest administration were beset with difficulties, which is not surprising considering that the Department was charged with the unpopular duty of pro-tecting the heritage of Nature from the rapacity of mankind—a duty which naturally roused the antagonism of the agricultural population of India. Exploration, demarcation and settle-ment, followed by efforts to introduce protection and some form of regular management, were the first duties of the Forest Department. Work on these lines, which is not yet completed in the more backward parts of the country, has been pursued steadily from the commence-nent, and in consequence large tracts of forest have been saved from ruin and are gradually being brought under efficient management. Whatever may have been the opinions held in some quarters half a century ago as to the need for a policy such as that expressed in Lord Dalhousie's memorable enunciation of 1855, there is no longer any doubt that results have amply justified the steps taken, and that in her forests India now possesses a property of constantly increasing value, the future im-portance of which it is hardly possible to overestimate.

Types of Forest.—More than one-fifth of the total area of British India (including the Shan States) is under the control of the Forest Department. These areas are classified as reserved, protected or unclassed State forests. In the reserved forests rights of user in favour of individuals and the public are carefully recorded and limited at settlement while the boundaries are defined and demarcated; in the protected forests the record of rights is not so complete, the accrual of rights after settlement not being prohibited, and the boundaries are not always demarcated; while in the unclassed forests no systematic management is attempted, and as a rule the control amounts to nothingmore than the collection of revenue until the areas are taken up for cultivation or are converted into reserved or protected forests. The total forest area of British India (including the Shan States) on 31st March 1930 was 249,710 square miles or 22.6 of the

total area. This was classed as follows: Reserved 107,753; Protected 6,263; Unclassed State 135,694.

Throughout this vast forest area, scattered over the length and breadth of India from the Himalavan snows to Cape Comorin and from the arid juniper tracts of Baluchistan to the eastern limits of the Shan States, there is, as may be imagined, an infinite variety in the types of forest vegetation, depending on variations of climate and soil and on other local factors. Broadly speaking, the following main types of forest may be distinguished:—

- (1) Arid-country forests, extending over Sind, a considerable portion of Rajputana, part of Baluchistan and the south of the Punjab, in dry tracts where the rainfall is less than 20 inches. The number of species is few, the most important tree being the babul or kikar (Acacia arabica), which however in the driest regions exists only by the aid of river in undations.
- (2) Deciduous forests, in which most of the trees are leafless for a portion of the year. These forests, which extend over large areas in the sub-Himalayan tract, the Peninsula of India and Burma, are among the most important, comprising as they do the greater part of the teak and sal forests.
- (3) Evergreen forests.—These occur in regions of very heavy rainfall, such as the west coast of the Peninsula, the exatern sub-Himalay an tract, and the moisture parts of Burma and are characterized by the great variety and luxuriance of their vegetation.
- (4) Hill forests.—In these the vegetation varies considerably according to elevation and rainfall. In the Eastern Himalaya, Assam and Burma, the hill forests are characterized by various oaks, magnolias and laurels, while in Assam and Burma the Khasia pine (Pinus khasya) grows gregariously at elevations of 3,000 to 7,000 feet. In the North-Western Himalaya the chief timber tree is the deodar (Cedrus deodara), which occurs most commonly at elevations of 6,000 to 8,000 feet, and in association with oaks or blue pine (Pinus excelsa); towards its upper limit the deodar merges into very large areas of spruce and silver fir, while below it are found extensive forests of the long-needled pine (Pinus longifolia) which is tapped for resin.
- (5) Littoral forests.—These occur on the sea coast and along tidal creeks. The most characteristic trees belong to the mangrove family (Rhizophoreae). Behind the mangrove belt is an important type of forest occasionally inundated by high tides, in which the most valuable species is the "sundri" (Heritiera armst).

Forest Policy.—The general policy of the Government of India in relation to forests was definitely laid down in 1894 by the classification of the areas under the control of the Depart-

of the areas under the control of the Department into four broad classes, namely:—
(a) Forests the preservation of which is essential on climatic or physical grounds. These are usually situated in hilly country where the retention of forest growth is of vital importance on account of its influence on the storage of the rainfall and on the prevention of erosion and sudden floods.

(b) Forests which afford a supply of valuable (b) Forests which afford a supply of valuable timbers for commercial purposes, such, for example, as the teak forests of Burma, the sail forests of Northern Central, and North-Eastern India, and the deodar and pine forest of the North-Western Himslaya.
(c) Minor forests, containing somewhat inferior kinds of timber, and managed for the production of wood, fodder, grazing and other produce for local consumption; these forests are of great importance in agricultural districts.
(d) Pasture lands,—These are not "forests"

(d) Pasture lands.—These are not "forests" in the generally understood sense of the term but grazing grounds managed by the Forest Department merely as a matter of convenience. These four classes of forest are not always

sharply divided from each other, and one and the same tract may to a certain extent be

managed with more than one object. Administration.—The forest business the Government of India is carried out in the Department of Education, Health and Lands. of India in forest matters. Under the Consti-tution of 1919 Forests were made a transferred subject in Bombay and Burma, where they had long been administered by the Provincial Govern-ments, and in 1924 the Reforms Inquiry Committee presided over by the late Sir Alexander Muddiman, Home Member of the Government of India, recommended that they be transferred in other provinces now unless any local Government on examination of the positione can make out a convincing case against the

transfer in its own province. Territorial charges.—The various provinces are divided into one or more Forest Circles; each in charge of a Conservator of Forests; provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his province. Circles are divided into a number of Forest Divisions, in charge of members of the Imperial or Provincial Forest Service; these Divisions in most cases correspond to civil districts. Each Division cases correspond to civil districts. Each Division contains a number of Ranges in charge of justor members of the Provincial Service or of Forest Rangers or Deputy Rangers; heavy Divisions are also sometimes divided into Subdivisions. The Ranges are further subdivided into a number of beats or protective charges held by Forest Guards or in some cases by Eventure. by Foresters.

Non-territorial changes .- Apart from territorial changes there are various important posts of a non-territorial nature connected with Forest Research and Education, the prepara-tion of Forest Working Plans, and other special duties.

The Forest Service.-The Forest Service comprises three branches:-

- (1) The Indian (Imperial) Forest Service with a sanctioned total personnel of 379 officers consisting of the Inspector-General of Forests, Chief Conservators, Conservators, Deputy and Assistant Conservators. Of these 281 have been recruited direct to the service. The officers of this service are recruited as probationers subject to the following methods prescribed in the Indian Forest Service (Recruitment) Rules,
  - (a) by nomination in England in accordance with such supplementary regulations as may be prescribed by the Secretary of State in Council.
  - (b) by competitive examination in India in accordance with such supplementary regulations as may be prescribed by the Governor-General in Council
  - (c) by direct appointment of persons selected in India otherwise than by competitive examination;
  - (d) by the promotion on the recommendation of local Governments of members of the Provincial Forest Services;
  - (e) by the transfer of promotion of an officer belonging to a branch of Government Service in India other than Provincial Forest Service.

Further recruitment to the Indian Forest The inspector-General of Forests is also President
of the Forest Research Institute at Dehra Dun
ment, has been suspended until a decision is
and is the technical adviser to the Government
reached on the recommendation of the Services Sub-Committee of the Indian Round Table Conference in regard to the provincialisation of the Indian Forest Service.

- In Bombay and Burma, where. Forest is a transferred subject new services called the Bombay and Burma Forest Services Class I, have been created to take the place of the Indian Forest Service.
- (2) The Indian Forest Engineering Service.—This service was created in 1919 but since 1922 no further recruitment has been made. Some of the Forest Engineers have been transferred to the Indian Forest Service or the Indian Service of Engineers and some have resigned or have retired. The future strength is not expected to remain at more than three i.e. (one each in Bombay, Madras and Punjab).
- The Provincial Service.-Formerly it consisted of Extra Deputy and Extra Assistant Conservators of Forests. All Extra Deputy Conservators who were considered to be fully qualified to hold a major charge were transferred to the Indian Forest Service in 1920. The class of Extra Deputy Conservators has been abolished and the service now consists of Extra Assistant Conservators only. The fixation of the strength of the personnel of the service rests with the local Governments.

Officers of this service are eligible for promotion upto 25 per cent. of the posts in the Indian Forest Service in provinces other than Bombay and Burms, such promotion being made by the Secretary of State for India. These officers are recruited and trained in India, their

recruitment being a matter for the local Gov-scheme was sanctioned for the expansion of erments. A certain number of posts in the service are filled by the promotion of specially promising Rangers. Owing to the establish-ment of a course for the training of probationers for the Indian Forests Service at Dehra Dun since 1926, the Provincial Service course ceased to exist from 1928. The I.F.S. College has also closed down at the end of Oct. 1932 as a result

closed down at the end of Oct. 1932 as a result of the stoppage of recruitment to the Indian Forest Service and as a measure of economy.

(4) The Subordinate Service consists of Forest Rangers (about 840), Deputy Rangers (about 900), Foresters (about 2,000) and Forest Guards (about 11,500). The Rangers are at present trained at three different centres—the Forest College at Dehra Dun (for provinces other these Purpose the Central Provinces. other than Burma, the Central Provinces, Bihar and Orissa, Bombay and Madras, the Burma Forest School at Pylmana (for Burma), and the Madras Forest College at Colmbatore (for Madras, Bihar and Orissa. Bombay and the Central Provinces). These three institutions were established in 1878, 1898 and 1912, respectively. The training of subordinates below the rank of Ranger is carried out in various local forest schools and training classes.

Research.-For the first fifty years of the existence of the Forest Department in India no attempt was made to organize the conduct of forest research, and thus to co-ordinate and to successful economic working. A commencement in organized forest research was at last made in 1906 by the establishment, at the instance of Sir Sainthill Eardley-Wilmot, then Inspector-General of Forests, of a Forest Research Institute at Dehra Dun. The Forest Research Institute, is under the administrative control of the Inspector-General of Forests who is also the President. There are five main branches of research, namely Sylvioulture, Forest Botany, Forest Economic Products, Entomology and Chemistry, each Products, Entomology and Chemistry, each branch being in charge of a research officer. The Timber Testing expert is engaged temporarily on short term contract. Indian Assistants have been appointed to receive the necessary technical training and experience with the object of eventually taking the place of experts if and when properly qualified. The Wood Technology, Paper Pulp Wood Preservation and Seasoning Sections are in charge of Indian experts who have received special Indian experts who have received special training in their various subjects in Europe and America.

As a result of Mr. R. S. Pearson's long and able administration of the Forest Economic Branch, the Government of India now have at Dehra Dun a series of forest workshops and ex-perimental laboratories without parallel any-where else in the world and official reports show that the value of the experimental work done in them is daily exemplified by the unending stream of inquiries received from persons doing business in timber and other forest products, not only in India but elsewhere in the world. The officers in charge of this branch received their training mostly in Europe and America and their efficiency is of a very high order.

Since 1906 research work has been prosecuted energetically so much so that in 1920 a new

the staff and site of the Institute. Since then new land has been acquired, on which new buildings have been built for accommodating the various expanded branches and the new the various expanded branches and the new machinery obtained from the United Kingdom. As a result of this, steady progress has been made in the investigations which should ultimately lead to the fuller and better utilization of the raw products produced by Indian forests. Unfortunately the need for retrenchment in all Government activities has stonged or cuttelled many promising lines of stopped or curtailed many promising lines of investigation.

Forest Products.—Forest produce is divided into two main heads—(1) Major produce, that is timber and firewood, and (2) Minor produce, comprising all other products such as bamboos, leaves, fruits, fibres, grass, gums, resins, barks, animal and mineral product etc., The average annual outturn of timber and fuel from all sources during the quinquennium ended 81st March 1931, the latest date for which statistics are available, was 353,863,000 cubic feet against an average of 361,172,000 cubic feet per annum attained in the preceding quinquennium. The annual outturn of timber and fuel from all sources during the quinquennium 1928-29 averaged 362,217,000 cubic feet against an average of 340,000,000 c. ft. during the preceding quinquennium. The trade in bamboos was almost stationary, with expectations of great development under commercial explotation development under commercies exploration for paper pulp minufacture in the near future. The five years witnessed the initiation and development of certain large exploitation schemes, especially in Madras, which had indifferent success. It was hoped in Madras by mainerent success. It was hoped in Madras by utilising modern American methods to extract and utilise very large quantities of valuable timbers, but the final result proved that this extensive exploitation was justified neither by the stand of timber in the forests nor by the possibilities of satisfying markets. The provincial Government after this experience adopted a more cautious policy.

An important measure for the development offorests in the Andamans was sanctioned by the Government of India. Hitherto, elephants had been employed for extraction of timber, with had been employed for extraction of timber, with the result that only the fringe of the forests could be touched. The new plan is for the employment of American methods, American logging machinery was purchased and an American expert engaged to take charge of the work. Owing, however, to the wide-spread depression in the timber trade the employment of mechanical methods for the extraction of timber have been suspended for the present Elsewhere in India a great part of the trade in timber lies in the hands of contractors who are recarded as on the whole trustworthy if sufficient regarded as on the whole trustworthy if sufficient control over their operations is maintained.

Forest Industries.—The important rôle which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognized. Fifteen years ago it was estimated that in Germany work in the forests provided employment for 1,000,000 persons while 3,000,000 persons, earning £30,000,000 year, were employed in working up the rate. material yielded by the forests. It accurate estimates were available for India, they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of wood-cutters, sawyers, carters, carriers, raftsmen and others working in and near them, employment on an enormous scale is provided to persons engaged in working up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat-builders, tanners, ropemakers, lac-manufacturers, basket-makers, and many other classes of skilled labourers. The Indian census shows over a million people and their dependents so employed in British India and nearly a further half million in Indian

States, but these are probably below the actuals, as much forest labour is not whole-time labour, devoting seven or eight months in the year to, forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known products, and the possible discovery of new products, a steady and extensive development of industries dependent on the forests of India may be confidently anticipated in the future.

Financial Results.—The steady growth of forest revenue, expenditure and surplus during the past 65 years is shown in the following statement, which gives annual averages for quinquennial periods:—

Pinancial Results of Forest Administration in British India from 1864-65 to 1928-29 (in lakks of rupees).

Quinquennia	l perio	od.		(Gross revenue average per annum).	(Expenditure average per annum).	Surplus (average per annum).	Percentage of surplus to gross revenue.

Most of the provinces show a steady increase of surplus. The slump in trade of the last few years was evident in the surplus for the year 1930-31 which fell to 121 lakhs from a previous 'peak' figure of 273 lakhs in 1926-27. The figure, however, is still a most favourable one and indicates that the forests of India are being properly worked for the benefit of the country, with the passing of the current worldwide depression the temporary set back in financial results may be expected to disappear.

Agencies.—An agency has been established im India by the Government of India for the sale of Government timber and it is at present held by Messrs. Martin & Co., Calcutta. The agency held in England by Messrs. W. W. Howard Brothers terminated in December 1926 and the work of

marketing Indian timbers in England (especially Andaman timbers) is now done under the direction of a Timber Adviser who is attached to the Office of the High Commissioner for India. This trade has not yet been raised to a satisfactory level, because, according to the official explanation, "the intense conservatism in English timber trade and the difficulty of obtaining a footing for little known timbers have considered to make satisfactory sales very difficult.

Bibliography.—A large number of bulletins and other publications has been issued by the Forest Research Institute, and of these a list can be obtained from the President, Forest Research Institute and College, New Forest Dehra Dun, U. P.

## WIRELESS TELEGRAPHY AND TELEPHONY.

Beam Stations.—The year 1927 saw the | new station equipped with modern apparatus commencement of Beam wireless services on | was erected and taken into service at Santa Cruz. the Marconi system between India and the United Kingdom. Powerful transmitting and receiving stations erected at Poona and Dhond respectively by the Indian Radio Telegraph Company are connected by land lines with the Central Telegraph Office in Bombay, whilst stations at Skegness and Grimsby are similarly connected with the General Post Office in London. and the circuits are so arranged that messages are exchanged between Bombay and London without intermediate handling at the Beam stations at either end. The huge aerial systems at Poona and Dhond, each supported on five steel towers 287 feet in height, are landmarks steel towers 287 feet in height, are landmarks over a distance of many miles. The service was inaugurated by His Excellency the Viceroy on 23rd July 1927 at the Central Telegraph Office, Bombay, when His Excellency transmitted a message to the King and His Majesty's reply was received a few minutes later.

It is noteworthy that the opening of the Beam wireless service coincided with a reduction in rates by the cable companies. The Eastern Telegraph Co., which operates the cable from Europe to India, has become merged in the New Imperial and International Communications Ltd.

For reasons of economy, most of the inland wireless stations in India were practically closed down and placed in charge of "Care and Maintenance" parties which carry out tests twice a month, the exceptions being Peshawar twice a month, the exceptions being Peshawar Radio, which always maintained official communication with Kabul in Afghanistan and Kashgar in China, and Jotogh Radio, which receives British Official Wireless sent out from Oxford and Rugby and passes the messages to Danton's Account of Administration of Carteria Account of Administration of Carteria Account of Carteria and Carteria Reuter's Agency for distribution to subscribing newspapers. The stations at Delhi and Allahabad have now been equipped with apparatus to enable them to function as aeronautical wireless stations and they are used as such. New wireless stations for aeronautical purposes have been erected at Jodhpur in Bikaner, and Gaya. The wireless installations at Karachi and Calcutta have been modified so as to meet all the Wireless requirements of aircraft passing over India. New stations equipped for acronautical communication purposes are under construction at Chittagong, Akyab, Sandoway and Bassein.

The coast stations, however, have been maintained in a state of high efficiency and many improvements effected. The application of the Baudot system to the high-speed continuous. wave wheless stations at Madras Fort and Mingaladon (Rangoon) has proved extremely satisfactory, and a large portion of the traffic between Southern India and Burma is regularly worked by this direct route instead of the circuitous route via Calcutta. The traffic is interrupted occasionally by atmospheric inter-ference, particularly during the hot weather but the difficulties have been largely overcome by handspeed working during the worst periods.

For many years the Bombay stations known as Rombay Radio was located on Butcher Island in the Harbour, but during 1927 a fine

rust outside the limits of Bombay Municipality.
Radio telegrams exchanged with ships at sea
by coast stations in India and Burma continue to increase in number, and now total about 30,000 per annum. Official telegrams are exchanged with the British Naval station at Matara (Ceylon) via Bombay Radio. Regular services are also maintained between Burma and the Malay Peninsula via Rangoon and Penang and between Burma and Sumatra, whilst radio traffic is passed between Madras and Colombo when the normal route is interrupted.

Wireless telephonic communication between pilot vessels, lighthouses and shore stations are maintained by the Port Trusts at Bombay and Rangoon. In March 1931, telephonic communication between Bombay and London was established for the first time. The conversations were initiated from the s.s. Belgenland a tourist ship lying in Bombay Harbour and were made possible through the courtesy of Standard Telephones and Cables Limited in conjunction with the International Marine Radio Company.

Safety at Sea .- A noticeable feature of wireless development during the past two years has been the provision of direction-finding apparatus at Bombay and Karachi and facilities at other coast stations whereby ships at sea equipped with direction-finding apparatus can obtain bearings on coast stations and thus determine their position with a remarkable degree of accuracy. The latest style of Marcony beacon was erected on Kennedy Island during 1931 to guide shipping approaching Bombay harbour. All Ships equipped with wireless direction finders will now be able to obtain exact knowledge of their whereabouts at a distance of 150 miles from the coast. The beacon is an experiment and is likely to be the first of many others along the coast of India. Improved arrangements for broadcasting time signals, weather reports and navigational warnings from coast stations have also proved of value to ships at sea.

Broadcasting.-For several years, limited broadcasting services were maintained by Radio Clubs in Calcutta, Bombay, Madras, Karachi and Rangoon, and although the transmitting sets employed by them were of very low power, the broadcasts were tuned-in over practically the whole of India. The club were assisted financially by a Government contribution based upon the revenue from license fees, but this did not nearly suffice to cover the cost of the transmissions, and the greatest credit is due to the members of those clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes. Credit is also due to the Indian States and Eastern Agency for the loan of transmitting apparatus, without which the broadcasts would have been impossible.

After negotiations extending over several years, an Indian Broadcasting Company was granted a license to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation, and transmitting stations were erected in Bombay and Calcutta,

the services at the former being inaugurated in India by private enterprise and to this by His Excellency the Vicercy in July 1927 and source that India may look in the future for the latter by the Governor of Bengal a month later. These stations had each an aerial input munication. There are two most promising of three kilowatts, the same as that of the 2LO stations in London, of which they are practically duplicates. The programmes were so arranged that both Indian and European music are broadcast daily and the news bulletins and market and weather reports are read in two languages.

Bombay broadcasts normally on a wavelength of 3509 metres, and Calcutta on 370 4 and 49 10 metres. Reception in either of these cities, and for a distance of twenty or thirty miles around, is possible on crystal sets, of which a very large number have been sold. Valve sets are necessary for those living further afield, but although there has been a considerable demand for these, the sales have not reached expectation. One of the greatest difficulties in India is the maintenance of batteries, which is no inconsiderable item when sets containing five or six valves are employed,

The Indian Broadcasting Company was wound up in 1930 and its operations have since been conducted by the Government of India, in the Industries and Labour Department. Government for this purpose formed an Indian State Broadcasting Service and instituted a Central Broadcasting Advisory Committee, representative of the non-official public in association with the Departmental officials, to keep them in touch with public opinion. The Committee has as its chairman the Member of the Viceroy's Executive Council in charge of the Subject (now the Hon, Sir Joseph Bhore) and upon it sit at the present time Messrs. and upon it sit at the present time accessrs.

N. B. Macbeth and N. M. Dumasia,
Bombay; H. H. Reylands and K. C. Neogy,
M.L.A., Calcutta; M. R. Coburn, Financial
Adviser to Government in the Posts and Telegraphs Department and B. Rama Rao, Joint
Country, to Couragnment in the Leutenes Secretary to Government in the Industries and Labour Dept. It is now proposed to establish a series of additional broadcasting stations in different parts of India so as to spread broadcasting receivable on low-powered sets throughout the land. Important proposals with this purpose in view were discussed by the Advisory Committee in Calcutta in December, 1930 An event of considerable importance was Bombay's broadcast to the world on December 13, 1933. This broadcast, played from the Empire Station, gave listeners in Europe their first opportunity of hearing a typical Indian programme.

Licenses -Broadcast receiving heenses are issued at Head Post Offices at a fee of ten rupees per year, and cover the use of receiving sets throughout British India except Baluchistan and the North-West Frontier Province. Licenses for fixed stations for transmitting and experimental purposes are much sought after, mental purposes are much sought after, and despite a careful scrutiny of the applicants, more than 300 have been issued. The number of traders in wireless apparatus who are required to take out special Import licenses has increased considerably during the past year. This improvement must be ascribed primarily to the commencement of broadcasting.

Prospects.-The Government of India have always encouraged the development of wireless

lines of development, viz -

(a) Erection of small sets either for speech or morse in districts where no land lines exist, and to link such districts with the existing landlines. In this connection it may be remarked that modern small radio sets are capable of using either morse or speech at will and if used for speech can be operated by the ordinary desk tele-

phone instrument in daily use all over India.
(b) The use of radio as a substitute for land. line to form the trunk telephone route between two cities which already have telephone facilities.

These would, it is thought, open up a new industry which if properly forstered would very soon extend its sales outside the limits of India. It is believed that the majority of parts for small radio sets could be more cheaply manufactured in this country than they can be imported and such an industry would find the right kind of skilled labour already in India.

Radio Telephone Service .-- An event of considerable importance was the mauguration of the radio telephone service between India and England on May 1, 1933, when His Excellency Sir Frederick Sykes, Governor of Bombay, and Sir Samuel Hoare, Secretary of State for India, exchanged messages as a pielininary to the opening of the service to the public.

The service is based upon the beam wireless

system which has been operated successfully for the past six years by the Indian Radio and Cable Communications Company between India and the United Kingdom and, since the beginning of this year, between India and Japan. Initially, the radio telephone service was limited to Bombay and Poona at the Indian end and to the United Kingdom at the other, but tacilities for conversation with other places were speedily arranged, and within a month it was possible for people in Bombay to speak to the United States, Canada, Australia, South Atrica and many other parts of the world. Similarly, there is a gradual extension of the area covered in India, and when the improvement of the landlines has been completed, nearly every important city will be in direct telephonic communication with England and the rest of the world.

Many technical problems are involved in the pertection of the India-England wireless telephone, not the least of which is the ensuring of secrecy. When the service was first opened, reports from ordinary broadcast listeners in all parts of the country and as far afield as Ceylon indicated that conversations could be "tapped" with the greatest case, but later "secreey gear" was installed.

Any private telephone owner will be able to use the service for an overseas call. Before doing so, however, he will have to place a deposit of Rs. 100 with the Divisonal Engineer,

Telegraphs, Bombay.
The charge for a 3 minutes' conversation to The energy for a 3 minutes' conversation to (a) place in England, Scotland and Wales is its. 80, (b) Northern Ireland (Dublin) and the lake of Man, Its. 84. Each additional minute's conversation to places under (a) will cost its. 26-11 and to (b) Rs. 28.

## The Press.

The newspaper Press in India is an essentially English institution and was introduced soon after the task of organising the administration was seriously taken in hand by the English in Bengal. In 1773 was passed the Regulating Act creating the Governor-Generalship and the Supreme Court in Bengal and within seven years at the end of the same decade, the first newspaper was started in Calcate, the first in wapap'r was started in Calcutta by an Englishman in January 1780. Exactly a century and a third has clapsed since, not a very long period certainly, a period almost measured by the life of a single newspaper, The Times, which came into existence only five years later in 1785; but then the period of British supremacy is not much longer, period of British supremacy is not much longer, having commenced at Plassey, only twenty-three years earlie. Bombay followed Calcutta closely, and Madras did not lag much behind. In 1789 the first Bombay newspaper appeared, The Bombay Herald, followed next year by The Bombay Courier, a paper now represented by The Times of India with which it was applicated of the Research of the which it was amalgamated in 1861. In Bombay the advent of the press may be said to have followed the British occupation of the island much later than was the case in Calcutta. In Calcutta the English were on sufferance before Plassey, but in Bombay they were absolute masters after 1665, and it is somewhat strange that no Englishman should have thought of starting a newspaper during all those hundred and twenty-five years before the actual advent of The Herold.

The first newspaper was called The Bengal Gazette which is better known from the name of its founder as Hucky's Gazette or Journal. Hicky like most pioneers had to suffer for his enterprising spirit, though the fault was entirely his own, as he made his paper a medium of publishing gross scandal, and he and his journal disappeared from public view in 1782. Several journals rapidly followed Hicky's, though they did not fortunately copy its bad example. The Indian Gazette had a career of over half a century, when in 1833 it was merged into the Bengal Harkaru, which came into existence only a little later, and both are now represented by The Indian Daily News with which they were amalgamated in 1866. No fewer than were annuagament in the state of the papers followed in as many years, the Bengal Gazette of 1780, and one of these, The Calcutta Gazette, started in February 1784, under the avowed patronage of Government, flour-ishes still as the official gazette of the Bengal Government.

In 1821 a syndicate of European merchants and officials commenced the publication of and omeiais commenced the publication of John Bull in the East, a daily paper which was intended to reflect Tory opinion in India and set an example to the Press generally in the matter of moderation and restraint. The name of this journal was altered to The Englishman by the famous Stocqueler in 1886.

From its commencement the press was calcusty watched by the authorities, who to serious restraints upon its independence of pursued a policy of discouragement and jealously watched by the authorities, who ut serious restraints upon its independence

ligorous control. Government objected to news of apparently the most trivial character affecting its servants. From 1791 to 1799 several editors were deported to Europe without trail and on short notice, whilst several more were censured and had to apologise. At the commencement of the rule of Wellesley Government promulgated stringent rules for the public press and instituted an official censor to whom everything was to be submitted before to whom everything was to be submitted before publication, the penalty for offending against these rules to be immediate deportation. These regulations continued in force till the time of the Marquis of Hastings who in 1818 abolished the censorship and substituted milder rules,

This change proved beneficial to the status of the press, for henceforward self-respecting and able men began slowly but steadily to join the ranks of journalism, which had till then been considered a low profession. Silk Buckingham, one of the ablest and best known of Anglo-Indian journalists of those days availed himself of this comparative freedom to criticise the authorities, and under the short administration of Adam, a civilian who temporarily occupied Hastings place, he was deported under rules specially passed. But Lord Amherst and still nore Lord William Unritially was not been added to the control of t Bentinck were persons of broad and liberal views, and under them the press was left practically free, though there existed certain regulations which were not enforced, though Lord Clare, who was Governor of Bombay from 1831 to 1835, once strongly but in vain urged the to 1835, once strongly but in vain urged the latter to enforce them. Metcalfe who succeeded for a brief period Bentinck, removed even these regulations, and brought about what is called the emancipation of the press in India in 1835, which was the beginning of a new era in the history of the Indian press. Among papers that came into being, was the Bombay Times which was started towards the close of 1838 by the leading merchants of Bombay, and which in 1861 changed its name to the Times of India. The Bombay Gazette, founded in 1791, ceased publication in 1914. founded in 1791, ceased publication in 1914.

The liberal spirit in which Lord Hastings had begun to deal with the press led not only to the improvement in the tone and status of the Anglo-Indian press, but also to the rise of the Native or Indian Press. The first newspaper in any Indian language was the Samachar paper in any Indian language was the Samachar Durpan started by the famous Serampore Missionaries Ward, Carey and Marshman in 1818 in Bengali, and it received encouragement from Hastings who allowed it to circulate through the post office at one-fourth the usual rates. This was followed in 1822 by a purely native paper in Bombay called the Bombay Samachar which still exists, and thus was laid the foundation of the Native Indian Press which at the present day is by far the largest part of the press in India, numbering over 650 papers.

the Mutiny its freedom had to be temporarily influence and also circulation was satisfactory. controlled by the Gagging Act which Canning passed in June 1857 on account of the license of a very few papers, and owing still more to the fears of its circulating intelligence which might be prejudicial to public interests. The Act was passed only for a year at the end of which the press was once more free.

On India passing to the Crown in 1858, an orn fidth passing to the crown and progress opened for the whole country in which the press participated. Ambala. After a lively existence for a few beginning of this period in 1858 and 25 Native acquired and incorporated the Mojusnities.

Famous journalists like Robert Knight, James Maclean and Hurris Mookerji flourished in this generation. The Civil and Military Gazette was originally published in Simia as a weekly paper, the first issue being dated June 22nd 1872. Prior to and in the days of the Mutiny the most famous paper in Northern India was the Mofussitite, originally published at Meerut, but afterwards at Agra and then at papers and the circulation of all was very small, and in 1876 the office of the paper was transferred. The number of the former did not show a great from Simia to Lahore, and the Gazette began rise in the next generation, but the rise in to be published daily.

## INDIAN PRESS LAW.

Before 1835 all printing of books and paper was subject to licence by the Governor-General in Council, and the licences were issued or refused at the discretion of Government. Act XI of 1835 repealed the old Regulations and merely required registration of the printer and made a few minor requirements. That Act was replaced in 1867 by the present Fress and Registration of Books Act, and, except for an Act which was in force for one year during the Mutny, there was no further legislation directly affecting the Press until 1878 when the Vernacular Press Act was passed. That Act was repealed during the Viceroyalty of Lord Ripon in 1882. I rom that date until 1907 Government made no attempt to interfere directly with the liberty of the Press, the growth of sedition being dealt with in other ways by the passing in 1898 of section 124A of the Penal Code in its present form, which had been originally enacted in 1870, and by the introduction into the Penal ('ode of section 153A and into the Criminal Procedure Code of section 108. There were a certain number of prosecutions under those sections up to 1907, but the dissemination of sedition through the Press continued. In 1908 the Newspaper (Incitement to Offences) Act was passed which dealt with papers inciting to murder or to acts of violence. This Act failed to have the desired effect.

The Indian Press Act, 1910, was a measure of wider scope, the main object of which was to ensure that the Indian press generally should be kept within the limits of legitimate discus-

The Act deals, not only with incitements to murder and acts of violence, but also with other specified classes of published matter, including any words or signs tending to seduce soldiers or sailors from their allegiance or duty, to bring into hatred or contempt the British Government, any Native Prince, or any sec-tion of His Majesty's subjects in India, or to intimidate public servants or private individaals.

The different sections of the Act have in view (i) Control over presses and means of view (i) Control over presses and means of publication; (ii) control over publishers of newspapers; (iii) control over the importation into British India and the transmission by the post of objectionable matter; (iv) the suppression of seditious or objectionable newspapers; books, or other documents wherever found.

Repeal of Press Legislation —By the autumn of 1917 the Government of India had begun to consider the desirability of modifying at least one section of the Press Act to which great exception had been taken on account of the wide powers that it gave. Finally, after more than once consulting Local Government, a Committee was appointed in February 1921 after a debate in the Legislative Assembly, to examine the Press and Registration of Books Act, 1837, and the Indian Press Act, 1910, and report what modifications were required in the existing law. That Committee made an unanimous report in July 1921, recommending :--

- (1) The Press Act should be repealed.
- (2) The Newspapers Incitements to Offences Act should be repealed.

(3) The Press and Registration of Books Act and the Post Office Act should be amended where necessary to meet the conclusion noted below: (a) The name of the editor should be inscribed on every issue of a newspaper and the clitor should be subject to the same liabilities as the printer and publisher, as regards criminal and civil responsibilities; (b) any person registering under the Press and Registration of Books Act should be a major as a closed by the the Late Major as the control of the property of the control of t defined by the Indian Majority Act; (c) local Governments should retain the power of confiscating openly seditious leallets, subject to the owner of the press or any other person aggreeved being able to protest before a court and challenge the seizure of such document, in which case the local Government ordering the confiscation should be called upon to prove the seditious character of the documents. The powers conferred by Sections 13 to 15 of the Press Act should be retained. Customs and Postal officers being empowered to seize seditious literature within the meaning of Section 124A of the I. P. C. subject to review on the part of the local Government and challenge by any persons interested in the courts; (e) any person challenging the orders of Government should do so in the local High Court; (f) the term of imprisonment prescribed in Sections 12, 13, 14 and 15 of the Press and Registration of Books Act should be reduced to six months, (q), the provisions of Section 16 of the Press Act should be reproduced in the Press and Registration of Books Act.

Effect was given to these recommendations during the year 1922.

Press Association of India.—At the end of 1915 this Association was formed in Bombay, According to the articles of constitution "Its objects shall be to protect the press of the country by all lawful means from arbitrary laws and their administration, from all attempts of the Legislature to encroach on its liberty or of the executive authorities on its liberty or of the executive authorities | Council.

to interfere with the free exercise of their calling by journalists and press proprietors, and for all other purposes of mutual help and pro-tection which may be deemed advisable from time to time." Members pay a minimum subscription of Rs. 10 annually. The affairs of the Association are managed by a

## Banking.

An event of great importance in the history of Indian banking was the formation on the 27th January 1921 of the Imperial Bank of India by amalgamation of the three Presidency Banks of Bengal, Bombay and Madras.

The idea of a Central Banking establishment for British India was mooted as early as 1836, and was the subject of a minute by Mr. James Wilson, when Finance Member, in 1859. Again, in 1867 Mr. Dickson, the woll-known Secretary of the Bank of Bengal, submitted detailed proposals for an amalgamation of the three Presidency Banks. On various later occasions the matter was brought forward without result and it was discussed by the Chamberlain Commission on Indian Finance and Currency in 1913. The present scheme which has come to fruition was however the result of a rapprochement on the part of the Banks themselves as a result of the experience gained during the war and the radisation of the desirability of strengthening and extending the Banking system in India,

The Presidency Banks:-The history of the Presidency Banks in their relationship with Government falls into three well-defined stages. Prior to 1862 the Presidency Banks had the right of note issue, but were directly controlled by Government and the scope of their business was restricted by their charters. The second period was from 1862 to 1876. In 1862 the Banks were deprived of the right of note issue, though by their agreements of that year they were authorised to transact the paper currency business as agents of Government. As compensation for the loss of their right of issue, they were given the use of the Government balances and the management of the treasury work at the Presidency towns and at their branches. The old statutory limitations on their business were at the same time greatly relaxed, though the Government's power of control remained unchanged. In 1866 the agreements were revised and the paper currency business was removed from their control and placed under the direct management of Government. The third period dates from the Presidency Banks Act of 1876 by which nearly all the most important limitations of the earlier period were reimposed. But, very briefly, the principal restrictions imposed by this Act prohibited the Banks from conducting foreign exchange business, from borrowing or receiving deposits payable out of India, and from lending for a longer period than six months, or upon mortgage or on the security of immovable property or upon promissory notes bearing less than two independent names or upon goods, unless the goods of the title to them were deposited with the Bank as security. At the same time Government abandoned direct interference In the management, ceasing to appoint official directors and disposing of their shares in the Banks. The Banks no longer enjoyed the full use of the Government balances, Reserve use of the Government balances. Reserve Treasuries were constituted at the Presidency towns into which the surplus revenues were drawn and the balances left at the disposal of the Banks were strictly limited.

This system continued with only minor modifications until 1920. During the war, however, the policy was deliberately adopted of reducing the amount of the balances held in the Reserve Treasuries and leaving much larger balances with the Headquarters of the Presidency Banks in order to assist the money market.

The Imperial Bank of Indie — Under the Imperial Bank of India Act of 1920 as amended by the Amendment Act of 1934 which comes into force at such date as the Governor-General in Council may by notification in the Gazette of India appoint, the control of the Bank is entrusted to a Central Bond of Directors with Local Boards at Calcutta, Bombay and Madins and such other places as the Central Board may determine. The Central Board of Directors shall consist of .

- (a) the presidents, vice-presidents and the secretaries of the Local Boards,
- (b) one person elected from amongst the members by each Local Board,
- (c) a Managing Director and a Deputy Managing Director appointed by the Central Board:
- (d) not more than two non-officials, nominated by the Governor-General in Council.

Representatives of any new Local Boards, which may be constituted, may be added at the discretion of the Central Board

The Deputy Managing Director and the Secretaries of the Local Bourds are entitled to attend the Meetings of the Central Board but not entitled to vote. The Deputy Managing Director is entitled to vote in the absence of the Managing Director.

The Governor-General in Council shall nominate an officer of Government to attend the Meetings of the Central Board but he shall not be entitled to vote.

Under the Imperial Bank of India Act of 1920 provision was made for the increase of the capital of the bank. The capital of the three Presidency Banks consisted of 3½ crores of ripees in shares of Rs. 500 each, fully substribed. The additional capital authorised was 7½ crores in shares of Rs. 500 each, of which Rs. 125 has been called np, making the present capital of the Bank Rs. 11½ crores, of which Rs. 5,62,50,000 has been paid up. The Reserve Fund of the Bank is Rs. 5,35,00,000 and the Balance Sheet of 31st December 1934 showed the Government balance at Rs. 6,72,19,792, other deposits at Rs. 74,27,94 823 and Cash Rs. 18, 97, 37, 908, with a percentage of each to liabilities of 23-15.

Agreement with Reserve Bank of India — The Bank shall enter into an agreement with the Reserve Bank of India which shall be subject to the approval of the Governor-General in Council and will remain in force to 15 years and thereatter intil terminated after five years' notice on either side. Provisions to be contained in the agreement between the Imperial Bank of India and the Reserve Bank of India are.—

The Imperial Bank of India shall be the sole to be paid to the Imperial Bank shall be deteragent of the Reserve Bank of India at all places in British India where there is a branch of the Imperial Bank of India which was in existence at the commencement of the Reserve Bank of India Act 1934, and there is no branch of the Banking Department of the Reserve Bank of

In consideration of the preformance of the Agency duties, the Reserve Bank of India shall pay to the Imperial Bank of India as remineration a sum which shall be for the first ten years during which this agreement is in force a commission calculated at 1/16 per cent on the first 250 crores and 1/32 per cent on the remainder of the total of the receipts and disbursements dealt with annually on account of Government As for the remaining five years the remuneration

mined on the basis of the actual cost to the Imperial Bank of India as ascertained by expert accounting investigation

In consideration of the maintenance by the Imperial Bank of India of branches not less in number than those existing at the commencement of the Reserve Bank of India Act, the Reserve Bank of India shall, until the expiry of 15 years, make to the Imperial Bank the following payments

- (a) during the first five years of this agreement Rs. 9 lacs per annum,
- (b) during the next five years of the agreement Rs 6 lacs per annum; and
- (c) during the next five years of the agreement Rs. 4 lacs per annum.

in India as an essential preliminary to the introduction of the scheme of Reforms to give India a Federal Government has been passed by the Legislative Assembly and Council of State and received the assent of the Governor-Generation March 6th, 1931. The proposals embodied in the Bill are given below:—

The Bank shall be constituted for the purposes of taking over the management of the currency from the Governor-General in Council and of carrying on the business of banking in accordance with the provisions of the Act. The original share capital of the Bank shall be five crores of rupees divided into shares of Rs. 100 each, which shall be fully paid-up, the maximum number of votes any one shareholder shall have is 10, every five shares carrying the right of one vote. The number of share registers shall be fixed at five to be maintained at Bombay, Calcutta, Delhi, Madras and Rangoon and the nonmal value of the shares assigned to each centre has been fixed at Rs. 140 lacs for Bombay, Rs 145 lacs for Calcutta, Rs. 115 lacs for Dellu, Rs 70 lacs tot Madras and Rs 30 lacs for Rangoon,

Management -The general superintendence and direction of the affairs and business of the Bank will be entrusted to a Central Board of Directors which shall exercise all powers and do all acts and things which may be exercised and done by the Bank. The Board shall be composed of .--

- tions made by the Board.
- (b) Four Directors to be nominated by the Governor-General in Council.
- (c) Eight Directors to be elected on behalf of the shareholders on the various registers.
- (d) One Government official to be nominated by the Governor-General in Council.

The Governor and Deputy Governors shall be the executive heads, and shall hold office for such term not exceeding five years as the Governor-General in Council may fix when appointing them, and shall be eligible for reappointment, A Local Board shall be constituted for each of the five areas.

Business which the Bank may transact -The Bank shall be authorised to carry on and transact the following commercial business, viz:—The accepting of money on deposit without interest; the purchase, sale and rediscount of bills of exchange and promissory notes with certain restrictions; the making of loans and advances, repayable on demand but not exceeding 90 days, against the security of stocks, funds and securities (other than immovable property) against gold coin or bullion or documents of title to the same and such bills of exchange and promissory notes as are eligible for purchase or rediscount by the Bank; the purchase from and sale to scheduled Banks of sterling in amounts of not less than the equivalent of Rs. 1 lacs; the making of advances to the scales presc Governor-General in Council and to Local the surplus Governments repayable in each case not later in Council.

Proposal to Establish the Reserve Bank than three months from the date of making the of India.—A Bill to establish a Reserve Bank (advance; the purchase and sale of Government in India as an essential preliminary to the securities of the United Kingdom maturing within ten years from the date of purchase; the purchase and sale of securities of the Government of India or of a Local Government of any maturity or of a local authority in British India or of certain States in India which may be specified.

> The Bank shall act as Agent for the Secretary of State in Council, the Governor-General in Council or any Local Government or State in India for the purchase and sale of gold and silver, for the purchase, sale, transfer and custody of bills of exchange, securities or shares, for the collection of the proceeds, whether principal, interest or dividends, of any securities or shares, for the remittance of such proceeds by bill of exchange payable either in India or elsewhere, and for the management of public debt.

> Right to issue Bank Notes.—The Bank shall have the sole right to issue bank notes in British India and at the commencement shall issue currency notes of the Government of India supplied to it by the Governor-General in Council and on and from the date of such transfer the Governor-General in Council shall not issue any currency notes. The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department.

(a) A Governor and two Doputy Governors In addition to the note issue obligation the to be appointed by the Governor-General in Bank shall undertake to accept monies for Council after consideration of the recommenda- account of the Secretary of State in Council, the Governor-General in Council and of Local Governments and shall carry out their exchange, remittance and other banking operations including the management of the public debt on such conditions as may be agreed upon.

> Obligation to Sell or Buy Sterling.—The Bank shall sell to or buy from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London at a rate not lower than 1sh. 5 49-64d, and not higher than 1sh. 6 3-16d respectively; provided that no person shall be entitled to demand to buy or sell an amount of sterling less than ten thousand pounds. Every scheduled bank shall maintain with the Reserve Bank a balance of not less than 5 per cent. of their demand and 2 per cent. of their time habilities.

> Allocation of Surplus.—The Governor-General in Council shall transfer to the Bank rupce securities of the value of Rs. five crores to be allocated by the Bank to Reserve Fund.

> After making the necessary and usual provisions out of profits, a cumulative dividend at such rate not exceeding five per cent, per annum on the share capital as the Governor-General in Council may fix at the time of the issue of the shares shall be paid and the surplus shall be allocated to the payment of an additional dividend to the shareholders calculated on the scales prescribed in the Act and the balance of the surplus shall be paid to the Governor-General

Provided that so long as the Reserve Fund s less than the share capital, not less than ify lacs of rupees of the surplus or the whole I the surplus if less than that amount shall be llocated to the Reserve Fund.

Publication of the Bank Rate—The Bank hall make public from time to time the tandard rate at which it is prepared to buy or duced elsewhere in the year Book.

re-discount bills of exchange or other commercial paper eligibls for purchase under the Act.

The Bank will publish the accounts of both the Issue and Banking Departments weekly in the Gazzette of India.

The Bank shall create an Agricultural Credit

The full text of the Reserve Bank Act is repo-

### THE EXCHANGE BANKS.

The Banks carrying on Exchange business n India are merely branch agencies of Banks n india are merely orance agencies of balas-aving their head offices in London, on the continent, or in the Far East and the United States. Originally their business was confined ilmost exclusively to the financing of the ex-ernal trade of India; but in recent years most of them, while continuing to finance this

At one time the Banks carried or their operations in India almost entirely with money borrowed elsewhere, principally in London— the home offices of the Banks attracting detre name omces of the Banks attracting de-posits for use in India by offering rates of in-terest much higher than the English Banks were able to quote. Within recent years how-ever it has been discovered that it is possible to attract deposits in India on quite as favourable terms as can be done in London and a very large proportion of the financing done by the Exchange Banks is now carried through by means of money actually borrowed in India No information is available as to how far each Bank has secured deposits in India, but the following statement published by the Director-General of Statistics in India shows how rapidly such deposits have grown in the aggregate within recent years.

### Exchange Banks' Investments.

Turning now to the question of the investment of the Banks' resources, so far as it concerns India, this to a great extent consists of the purchase of bills drawn against imports and exports to and from India.

most of them, while continuing to finance this part of India's trade, have also taken an active part in the financing of the internal portion also part in the financing of the internal portion also part by Branches outside India, the Indian Branches' share in the business consisting principles. cipally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawees of the bills, and it is as regards the export business that the Indian Branches are more immediately concerned The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able however by a system of rediscount in London to limit the employment of their own resources to a com-paratively small figure in relation to the business they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on but the following figures appearing in the balance sheets dated 31st December 1933 of the undernoted Banks will give some idea of this

## LIABILITY ON BILLS OF EXCHANGE RE-DISCOUNTED AND STILL CURRENT.

	£.
Chartered Bank of India, Austra- lia and China	3,477,000
Eastern Bank, Ltd	183,000
Hongkong and Shanghai Banking Corporation	1,074,000
Mercantile Bank of India, Ltd	1,383,000
National Bank of India, Ltd	2,938,000
P. & O. Banking Corporation, Ltd.	1,359,000
	10,414,000

The above figures do not of course relate to re-discounts of Indian bills alone, as the Banks operate in other parts of the world also, but it may safely be interred that bills drawn in India form a very large proportion of the whole The bills against exports are largely drawn at | prefer to hold the bills on their own account three months sight and may either be "clean" as an investment until maturity. or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well-known firms at home or against credits opened by Banks or financial houses in England and bearing as or manciar forces in England and Desiring as they do an Excharge Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India are sent home by the first possible Mail so that presuming they are rediscounted. as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London Banks in India is of the usual nature and need discount rate while on occasions also the Banks not be given in detail.

The Banks place themselves in funds in India for the purpose of purchasing export bills in a variety of ways of which the following are the principal:-

- (1) Proceeds of import bills as they mature. (2) Sale of drafts and telegraphic trans-
- fers payable in London and elsewhere out of India.
- (3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State.
- (4) Imports of bar gold and silver bullion
- (5) Imports of sovereigns from London, Egypt or Australia

The remaining business transacted by the

The following is a statement of the position of the various Exchange Banks carrying on business in India as at 31st December 1933 :---

#### JOINT STOCK BANKS.

Previous to 1908 there were few Banks of | The first important failure to take place was this description operating in India, and such as that of the People's Bank of India and the loss were then in existence were of comparatively of confidence caused by the failure of that Bank small importance and had their business con-fined to a very restricted area. The rapid the principal being that of the Indian Specie development of this class of Bank, which has been so marked a feature in Banking within recent years, really had its origin in Bombay Since those events of ten years ago and set in with the establishment of the Bank confidence has been largely restored. But in of India and the Indian Specie Bank in 1906. April 1923 the Alliance Bank of Simla suspend-After that time there was a perfect stream ed payment and is now in voluntary liquidation of new flotations, and although many of the new Companies confined themselves to legitimate Bank might have been disastrous but for the banking business, on the other hand a very large prompt action of the Imperial Bank which number engaged in other businesses in addition dealt with the situation in close association

that the business of many of the Banks was of a very speculative and unsate unactors of the was a matter of no great surprise to many During 1923 the Tata industrial and in 1918, was merged in the of a very speculative and unsafe character and Banks were in difficulties.

The effect of the failure of this old established and can hardly be properly classed as Banks.

These Banks made very great strides during Bank undertook to pay the depositors of the the first few years of their existence, but it Alliance Bank 50 per cent, of the amounts due was generally suspected in well informed circles to them. A panic was averted and a critical period was passed through with little difficulty.

Central Bank of India.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets :---

#### INDIAN PRIVATE BANKERS AND SHROFFS.

pecunious people, but this is hardly fair to the The extent to which any one shroff may grant people known as "shroffs" in banking circles, accommodation in the bazaar is therefore as there is no doubt that the latter are of very dependent on two factors, viz., (1) the limit real service to the business community and of which he himself may think it advisable to very great assistance to Banks in India. Under place on his transactions, and (2) the extent to present conditions the Banks in India can pever which the Banks are prepared to discount bills been to be able to get into authors the second of hope to be able to get into sufficiently close bearing his endoisement. The shroffs keep in touch with the affairs of the vast trading community in India to enable them to grant accom-they grant accommodation, and past experience modation to more than a few of these traders has shewn that the class of business above direct and it is in his capacity as middleman referred to is one of the safest the Banks can direct and it is in his capacity as middleman In this capacity also he brings a very considerable volume of business within the scope based on the scope b or the Presidency Banks Act, and enables the Presidency Banks to give accommodation discount the bills with the Banks and necessive which, without his assistance, the Banks would saily vary according to the standing of the bornot be permitted to give. The shroff's position rower and with the season of the year. Generals an intermediary between the trading community and the Banks usually arises in something after the following manner. A shopper than the bazars with limited progress of the large munity and the Banks usually allowed thing after the following mainer. A shop-thing after the following mainer. A shop-in Bombay to a first class borrower. Rates keeper in the bazaar, with limited means of his keeper in the bazaar, with limited means of his Calcutta and Madras are on a slightly higher own, finds that, after using all his own money, he still requires say Rs. 25,000 to stock his shop scale due in a great measure to the lact that suitably. He thereupon approaches the shroff, the competition these places on it is in Rombay. and the latter after very careful inquiries as to 15 not so keen in these places as it is in Bombaythe shopkeeper's position grants the accommodation, if he is satisfied that the business is safe. The business, as a rule, is arranged through a hoondee broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs. 2,500 each. A hoondee usually drawn at a currency of about 2 months is almost invariably taken by the shrofts in respect of such advances.

on the shroffs are greater than they are able to no doubt that this is done to a very considerable meet out of their own money, and it is at this extent.

Indian private Bankers and Shroffs fourished point that the assistance of the Banks is called in India long before Joint Stock Banks were into requisition. The shroffs do this by taking ever thought of, and it seems likely that they a number of the bills they already hold to the will continue to thrive for some very consider Banks for discount under their endorsement, able time to come. The use of the word and the Banks accept such bills freely to an "Shroff" is usually associated with a person extent determined in cach case by the standing who charges usunous rates of interest to important processes the standing of the shroff and the strength of the drawers, consider the strength of the strength of the drawers,

The rates charged by the shroffs are usually based on the rates at which they in turn can scale due in a great measure to the fact that

The shroffs who engage in the class of business above described are principally Marwaries and Multanis having their Head Offices for the most part in Bikaner and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by "Moonims" who have very wide powers.

It is not known to what extent native bankers and shroffs receive deposits and engage in ex-A stage is reached however when the demands change business throughout India, but there is

#### THE BANK RATE.

Formerly each Presidency Bank fixed its a rule at a slightly higher rate. Ordinarily own Bank Rate, and the rates were not uniform, such advances or discounts are granted at from own bank rate, and the rates were not uniterin. Such advances or discounts are grained as from Now the Imperial Bank fixes the rate for the whole of India. The rate fixed represents the rate charged by the Banks on demand loans son months, when the Bank rate is sometimes against Government securities only and advances on other securities or discounts are granted as

The following statement shows the average Bank Rate since the Imperial Bank was constituted:

#### BANKERS' CLEARING HOUSES.

The principal Clearing Houses in India are and to receive in exchange all cheques drawn those of Calcutta, Bombay, Madras, Rangoon, on him negotiated by the latter. After all Colombo and Kalachi, and of these the first the cheques have been received and delivered two are by far the most important. The the representative of each Bank advises the members at these places consist of the imperial settling Bank of the difference between his Bank, most of the Exchange Banks and English total receipts and deliveries and the settling Banking Agency irms, and a lew of the better Bank thereafter strikes a final balance to satisfy Banking Agency firms, and a lew of the better Bank thereafter strikes a final balance to satisfy known of the local Joint Stock Banks. No Bank itself that the totals of the debtor balances is entitled to claim to be a member as of right agrees with the total of the creditor balances, and any application for admission to a Clearing The debtor Banks thereafter arrange to pay must be proposed and seconded by two members the amounts due by them to the settling Bank

mentioned and a representative of each member accounts with the settling Bank so that the attends at the office of that Bank on each busi-final balances are settled by cheques and book noss day at the time fixed to deliver all cheques entires thus doing away with the necessity for he may have negotiated on other members cash in any form.

and be subject thereafter to ballot by the during the course of the day and the latter in existing members. The duties of setting Bank are undertaken the balances due to the creditor Banks. In by the Imperial Bank at each of the places practice however all the members keep Bank

## The Railways.

The listory of Indian Railways very closely inethod of construction; the Government reflects the financial vicissitudes of the country secured sanction to the building of lines by Not for some time after the establishment of direct State Agency, and funds were allotted Railways in England was their construction of the purpose, the metrogange being adopted in India contemplated, and then to t at their for cheapness. Funds soon lapsed and the purpose of in India contemplated, and then to test their for cheapness. Funds soon lapsed and the applicability to Eastern conditions three experimental lines were sanctioned in 1815. These money available had to be diverted to commental lines were sanctioned in 1815. These were from Calcutta to Ramgani (122 miles), the East Indian Railway, Bombay to Kalyan, Jument had therefore again to resort to the (33 oulse), Great Indian Permental Railway; simple that the choice again to resort to the Railway, Indian Railway building on a Pennsula, the Bengal-Nagpur (1883-87); serious scale lates from Lord Dalhonse's great the Southern Malratta (1882), and the Assam Funder (1882) and the Assam Railway (1882) were constructed under guaranteer and the finding many formatics of the Parameters of the Railway (1882) were constructed under guaranteer and the finding many formatics of the Railway (1882) were constructed under guaranteer and the Indian Malratta (1882), and the Assam funder guaranteer and the Indian Malratta (1882) and the Assam funder guaranteer and the Indian Malratta (1882) and the Assam funder guaranteer and the Indian Malratta (1882) and the Assam funder guaranteer and the Indian Malratta (1882) and the Assam funder guaranteer and the Indian Malratta (1882) and the Assam funder guaranteer and the Indian Malratta (1882) and the Assam funder guaranteer and the Indian Malratta (1882) and the Malratta (1882) and minute of 1853, wherein, after dwelling intensity the great social, political and commercial adtracts of connecting the chief cities by iail, panies. Their total length was over 4,000 miles. the great social, political and commercial variangers of connecting the chief cities by tail, he suggested a great scheme of tunk lines linking the Presidencies with each other and the miland regions with the principal parts. This reasoning commended itself to the Directors of the East India Company, and it was powerfully reinforced when, during the Muttny, the barrers imposed on free communication were severely felt. As there was no private capital in India available for railway constinction. Singlish Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose. By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions. These companies were (1) the Fast Indian; (2) the Great Indian Penniula, (3) the Muttus; (4) the Borebay, Baroda and Central India; (5) the Eastern Bengal, (6) the Indian Branch, later the Oudh and Robbkund State Railway and now past of the East Indian Railway, (7) the Sindian Penniula and Delhi, now merged in the North Western State Railway, (8) the Great South-Pinnab and Delhi, now merged in the North Western State Railway, (8) the Great South-Pinnab and Delhi, now merged in the North Western State Railway, (8) the Great South-Pinnab and Delhi, now merged in the North Western State Railway, (8) the Great South-Pinnab and Delhi, now merged to the Indian Railway (8) the Great South-Pinnab and Delhi, now merged to the Indian Railway (8) the Great South-Pinnab and Delhi, now merged to the North Western State Railway, (8) the Great South-Pinnab and Delhi, now merged to the North Western State Railway, (8) the Great South-Pinnab and Delhi, now merged to the North Mestern State Railway (8) the Great South-Pinnab and Delhi, now merged to the North Mestern State Railway (8) the Great South-Pinnab and Delhi, now merged to the North Mestern State Railway (8) the Great South-Pinnab and Delhi, now merged to the North Mestern State Railway (8) the Great South-Pinnab

Railway system as it exists to-day.

Early Disappointments.

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the orly condition on which investins would come forward. This guarantee was five per cent, coupled with the guarantee was five per cent, coupled with the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met; the interest charges were calculated at 221, to the of rebates. Instead of a gold subsidy, compuned to the Railways were to be sold to Government. rupee, the Railways were to be sold to Gov-panies were offered a relate on the gross earnerment on fixed terms at the close of twenty-mass of the traffic interchanged with the main five years and the Government were to exercise, so that the dividend might rise to four and the General weight of careful and work for cent, but the dividend might use to four cose close control over expenditure and work for cent, but the rebate was limited to 20 pt ing. The early results were disappointing cont. of the gross carnings. Under these con-Winst the Rankways greatly increased the ditions, there were promoted the Alimedabad-efficiency of the administration, the mobility Pranter, the South Behar, and the Southern of the troops, the trade of the country, and the Prante, the terms strictly adhered to. The Barrinike profits sufficient to meet the guaranteed Light Rankway, on the two feet six inches gauge, interest. Some critics attributed this to the lentered the field without any guarantee, and undecessarily high standard of construction with rolling stock designed to distributed the

nuccessarily half standard of construction and noting stock designed to illustrate the adopted, and to the engineers' ignorance of carrying power of this gauge. The rebates local conditions; the result was that by 1889 terms being found unattractive in view of the redefict on the Railway budget was Rs. 1664 competition of 4 per cent. trustee stock, likhs. Seeking for some more economical they were revised in 1896 to provide for an

feeder line companies was promoted, though scapecoat of the critics who protested against in none were the conditions arbitrarily exacted, the unwisdom of constructing railways from As these terms did not at first attain their borrowed capital. But with the completion purpose, they were further revised, and in licul of the Chenab and Jhelium Canals, the Northwas substituted an increase in the rate of guar. Western became one of the great grain lines was substituted an increase in the rate of guar-; Western became one of the great grain lines antee from 3 to 3½ per cent and of rebate from . If the world, choked with traffic at certain 3½ to 5 per cent, with equal division of simplus seasons of the year and making a large profit profits over 5 per cent in both cases. At last, for the State. In 1900 the tailways for the the requirements of the market were met first time showed a small gain to the State, and there was for a time a mild boom! In succeeding years the net receipts grew in feeder railway construction and the stock rapidly. In the four years ended 1907-08 of all the sound companies promoted about at they averaged closs upon £2 millions a year, a substantial premium. Conditions changed in the following year there was a reliance. Bad effect the way and the According to the following year there was a reliance. after the war and the Acworth Committee so hirvests in India, accompanied by the mone-tar nom approving of this system, considered trary prine caused by the American financial that the aim of the Government should be to crisis, led to a great falling off in receipts just reduce by amalgamaton the number of existing when working expenses were rising, owing companies and that it should only be in cases to the general mercase in prices. Instead of a where the State cannot or will not provide north the was a deficit of £4 240,000 in the adequate funds that private enterprise in this railway accounts for 1908-09. But in the direction should be encouraged

The existing Branch Line Companies have: this purpose at heavy rates of interest of issued debentures at special rates of interest (usually money to be advanced to them by the Railway deficit, but the net railway grin decreased to Board. So far, therefore, from reducing the hard of the return of hourd. So far, therefore, from reducing the loss of £6,182,000 m 1921-22. As a result of amount that the Government of India have the steps taken by the Railway Board, howing the amount. For the above reasons, the ever, on the report of the Aeworth Committee Government of India have abolished this system in 1921, this loss was changed into a gain of to raise in the open market, they were increasand are now prepared themselves to find the capital required for the construction of extersions or branches to existing main line systems They have also announced their readmess to consider the question of constructing branch or feeder lines which were not expected to be renumerative from the point of view of railway carnings upon a guarantee against foss from a Local Government or local authority which, might desire to have such lines constructed for purely local reasons or on account of administrative advantages fikely to accine in particular areas. This proposal was put forward as affording a sintable method of reconciling the interests of the Central and the Local Local. Governments and of providing for local bodies and for Local Governments a method of seeming the construction of railways which may be required for purely local reasons and which, while not likely to prove remunerative on purely radway carmings, are likely to give 1933 34 such benefits to Local Governments and local \* The contribution to General Reve uses due paid under the gnaturities. Some such arranges for the co. 19 12-23 union4s to Rs. 523 lablus ments have already been made with Local, or 13 lable less than 1931-32. The payment Governments in Madras. Punjab, Burma and of the contribution has been field in abeyonce Bombay.

#### Railway Profits begin.

Meantime a much more important change sveres rate of exchange for the year was in progress. The gradual economic development of the country vastly increased of accounts the depression. The arinings the traffic, both passenger and goods. The latting in of the original contracts allowed Gov-crotes in 1932-33 to Rs. 86 crotes in 1933-34

absolute guarantee of 3 per cent, with a share cumment to renew them on more favourable of surplus profits, or rebate up to the full exterms. The development of irrigation in the tent of the main line's net earnings in supple-Punjah and Sind transformed the North-Westment of their own net earnings, the total being 3rn State Railway. Owing to the birden of limited to 3\frac{1}{2} per cent, on the capital outlay, naintaining the improfitable Frontier lines, Under these terms, a considerable number of this was the Cinder lia Railway in India—the following year there was a reversion to a profit, and the net Railway gain has steadily inceased for some time to take additional capital requirements. They have either amounted to £10,573,000. Although in a obtained overfarits from various Banks to a bank to the property of the capital monsoon, the realway revenue must fluctuate, there was no reason to anterpate a further £813,000 m 1922-23

> The results in succeeding years will be seen from the following statements -

## of Railway Board.

As the original contracts carried a definite These changes induced a corresponding necessary for Government to exercise strong change in Indian Railway policy. Up to supervision and control over the expenditure 1900 the great work had been the provision during construction, and over management of tunk lines. But with the completion of land expenditure after the lines were open for the Nagda-Muttra line, providing an alter- traffic. For these purposes a staff of Consulting native broal-gauge route from Bombay to Engineers was formed, and a whole system of Dolin through Eastern Rajputana, the trunk checks and counterchecks established, leading system was virtually complete. A direct up to the Railway Branch of the Public Works broad-zauge route from Bombay to Sind is Department of the Government of India. As needed, but the poor connected prospects of traffic developed, the Indian Railways out-the line and the opposition of the Rao of Cutch' grew this dry nursing, and when the original to any through line in his territories, has for contracts expired, and the interests of Govern-some time kept this scheme in the background ment and the Companies synchronised, it became The possibilities however of this construction; not only vexatious but unrecessary. Accordingly being undertaken have improved considerably in 1901-02 Mr. Thomas Robertson was deputed recently and a detailed survey is being carried by the Secretary of State to examine the whole

Indian Railways, and he recommended that partment is called upon to watch the interests of the existing system should be replaced the Central Government and is frequently asked by a Railway Board, consisting of a Chairman to advise the Local Governments. Its duties and two members with a Secretary. The do not end there. The uninc development of Board was formally constituted in March 1905, railways depend, largely on the Government of The Board was made subordinate to the Government of India in which it was represented by the Department of Commerce and Inexpenditure and considered the greater questions evolution of a satisfactory authority for the of policy and economy affecting all the lines, administration of these varied functions has Its administrative duties included the construction of new lines by State agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement duty should be to prepare a definite scheme of disputes between lines, the control and for the reorganization of the Railway Depart-promotion of the staff on State lines, and the ment and Mr. C. D. M. Hindley, formerly Agent general supervision over the working and expenditure of the Company's lines. Certain minor changes have taken place from time to time since the constitution of the Railway Board. In 1908, to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a Secretary to Government with the right of independent access to the Viceroy; he usually sat in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of com-plaints of the excessive interference of the Board with the Companies, an informal mission was undertaken by I ord Incheape to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of Indian Railway policy. This decision was, however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organization was further fully examined by the Acworth Committee in 1921 and a revised organization which is described later was introduced from 1st April 1924.
Some of the difficulties involved in

constitution of a controlling authority for the railways of India may be realized from a study of the "Notes on the Relation of the Government to Railways in India" printed as an appendix to Volume I of the Annual Report by the Railway Board on Indian Railways. These notes bring out the great diversity of conditions prevailing which involve the Rallway Department in the exercise of the functions of-

(a) the directly controlling authority of the State-worked systems aggregating 18,199 miles in on the 31st March 1929,

(b) the representative of the predominant owning partner in systems aggregating 29,451

miles,
(c) the guaranter of many of the smaller com-

(d) the statutory authority over all railways in India.

Moreover in all questions relating to railways or railways and to undertake work on the many

question of the organization and working of the Governments are concerned, the Railway Derailways depends largely on the Government of India and the Rallway Department is therefore called upon to plan out schemes of development, to investigate and survey new lines and It prepared the railway programme of to arrange for financing their construction. The proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir Wilham Acworth who recommended the early appointment of a Chief Commissioner of Railways whose first of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st, 1922.

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Railway Board is solely responsible-under the Government of India-tor arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not, as was the President, subject to be out-voted and over-ruled by his colleagues on the Board. The detailed re-organization of the Railway Board in accordance with the Chief Commissioner's proposals required careful con sideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of parti enlar urgency and the Secretary of State's sinction was therefore obtained to the appointment with effect from 1st April 1923. While in the person of the Chief Engineer the Railway Board has always had available the technical advice of a senior Civil Engineer in Mechanical Lingmeeting questions it has had to depend on outside resistance. The disadvantages of this arrangement have become increasingly evident and it was therefore decided with effect from November 1st, 1922, to create the new appointmont of Chief Mechanical Engineer with the Railway Board.

The reorganization carried out in 1924 had for one of its principal objects the relief to the Chief Commissioner and the Members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, railway administrations and public bodies by toming to a greater extent than they had been able to do in the past

This object was effected by the following new posts which in some cases supplemented the existing one, and in other cases replaced them Directors of Civil Engineering, Mechanical Engineering, Traffic, Establishment and Finance and seven Deputy Directors working under them.

The necessity of some central organisation to co-ordinate the publicity central carried out on extra municipal tramways in which Provincial torms of radways publicity which can be best

organised by one central body led to the State-managed lines have generally adopted the manufaction of the Central Publicity Bureau divisional organisation. under a Chief Publicity Officer in 1927. The success which has attended the work of this Bureau led to its being made permanent from January 1st, 1929. The work undertaken is Statutory Andit Office attached thereto, was described later. described later.

The growing importance of Labour questions ment in 1929 of a third member whose mam duties are connected with the satisfactory solution of labour problems and the improvements of the conditions of service of the staff: generally and of the lower paid employees in particular

Under the Railway Board's pohey of progresssive standardisation, a Contral Standardisation Office was established under a Chief Controller of Standardisation to provide the means whereby such standardisation would be progressively full, the Board of Directors of the Bouiliary effected in accordance with changing conditions, Baroda, a Central India Railway have also and as the result of marked layers are also and as the result of practical experience. The Technical Officer under the Railway Board was transferred to this office as a Deputy Controller

The present superior staff under the Railway Board, therefore consisted of 5 Dricctors, 5 Deputy Directors, a Scrietary and an Assistant Secretary in addition to the Controller of Railway Accounts and his officers, to the Central Publicity Officer and the Officers in the Central Publicity Bineau and to the Chief Controller and the officers in the Central Standardisation Office.

The question of transferring the supervision of rallway accounts of State Railways from the Finance Department to the Railway Board was under consideration for some time and m accordance with a resolution adopted, by the Legislative Assembly in September 1925, a start was made with the transfer of the supervision of allway accounts on the Last Indian Railway. At the same time a sepa-rate Audit Stall was appointed reporting directly to the Anditor-General As it was found that the separation of Andit from Accounts led to greater efficiency, a similar organisation was introduced on other Statemanage I railways during 1929. The supervision of Accounts Others was placed under a Controller of Railway Accounts reporting to the Financial Commissioner of Radways and that of Audit Othcers under a Ducctor of Railway Audit reporting to the Auditor-General These two duties were previously combined under the Accountant-General, Railways, reporting to the useful work. Auditor-General. The Chef Accounts Officers on railways are now under the Agent but have Commissioner of Railways,

#### Management.

#### Clearing Accounts Office.

4 Clearing Accounts Office, relating to the cheek and apportionment of necessitated the organisation of a new branch traffic interchanged between State managed in the Railway Board's office and to the appoint. R cliways. The work of the different railways ment in 1999 of the different railways North Western Railway being taken over first on the 1st January 1927, the Eist Indian Railway following on the 1st April, the Eastern Bengal Railway on the 1st January 1928, and the Great Indian Pennisula Railway later.

> At the regnest of the Bombay, Baroda and Central India Railway an exhaustive experi-ment was conducted to check the accuracy of the results obtained by the revised procedure, and as the experiment was completely successagreed to the transfer of the check and apportionment of their loreign traffic to the Clearing Accounts Office

During 1927-28 demonstrations explaining the Clearing Accounts. Office procedure were given to the representatives of the Press as well as to the representatives of the various railways who visited the office to study the new procedure. An important demonstration was given to the representatives of the Southern Radways at Madras who were so impressed with the superiority of the new procedure that they unanimously recommended to their Home Boards the transfer of the work of check and apportionment of earnings from interchanged trathe to the Clearing Account Office, and it was hope I to open a branch Clearing Accounts Office at Madras at an early date to deal with such traffic but owing to certain later developments in connection with experiments now in operation of through rate registers and of decentralisation of Traffic Accounts Work, no definite decision has yet been arrived at.

#### The Railway Conference.

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 un ler the title of the Indian Railway Conference Association. It is under the direct contiol of the railways, it elects a President from amongst the members, and has done much

#### The Indian Gauges.

The standard gauge for India is five feet certain powers of direct reference to the Financial six mehes. When construction was started the broad-gauge school was strong, and it was thought advisable to have a broad-gauge in The Railways managed by Companies have coder to resist the influence of cyclones. But Boards of Directors in London and me in 1870, when the State system was adopted represented in India by an Agent. Some of it was decided to find a more economical gauge, represented in India by an Agent. Some of it was decided to find a more economical gauge, the Company-managed radways are still on a for the open lines had cost £17,090 a mile, departmental basis with a Trathe Manager. After much deliberation, the metre-gauge of Chief Engineer, Locomotave and Carriage and 3 tect 3% inches was adopted, because at Wagon Superint-indent. Controller of Stores and that time the idea of adopting the metric system Chief Auditor, while others have separated the for lindia was in the air. The original intention Transportation and Commercial dates of the was to make the metre-gauge incorporation of Locomotive running with Transportation as soon as the traffic instifled it; consequently they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power or the metre-gauge lines than to convert them to the broad-gauge. So, except in the Indus Valley, where the strategic situation demanded an unbroken gauge, the metre-gauge lines were improved and they became a permanent feature in the railway system. Now there is a great metre-gauge system north of the Ganges onnected with the Rapputana lines and Kuthiawar and another system in Southern India embracing the Southern Maratha and the South India Systems. These are not yet connected, but the necessary link from Khandwa by way of the Nizam's Hyderabad-Godaveri Railway, cannot be leng delayed. All the Barms lines are on the metre-gauge Certam feeder and inli railways have been constructed on the 2'-6" of the Barsi Light Railway which showed the possible expanty of the 2'-6" gauge, there has been a tendency to construct feeder lines on this rather than on the metre-gauge,

State versus Company Management -The relative advantages and disadvantages of State and Company management of the railways owned by Government which comprise the great bulk of the railway mileage in India have been the subject of discussion in official circles and the public press for many years. In India the question is (ii) iphrated by the fact that the more important companies have not in recent years been the owners of the railways which they manage and the headquarters of their Boards are in London. The subject was one, perhaps the most important, of the terms of reference of the Acworth Railway Committee. That Committee was unfortunately, mable to make a manimous recommendation on this point, their mem bers being equally divided in favour of State management and Company management. They were however, unammous in recommending that the present system of management by Boards of Directors in London should not be extended beyoud the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23, the question was again referred to certain Local Governments and public bodies and opinions collected and discussed. The approaching termination of the East Indian Railway contract on 31st December 1924 and or that of the Great Indian Peninsula Railway on 30th June 1925 rendered an early decision on this question imperative. When the question was debated in the Legislative Assembly in February 1923, the non-official Indian Members were almost manimously in favour of State management and indeed were able to carry a resolution recommending the placing of the East Indian Railway and the Great Indian Peninsula Railway under State management at the close of their present contracts. The Government of India, however, expressed themselves as being so convinced by the almost universal failure of this method in other countries that they proposed, while accepting the necessity for taking over the management of the East Indian Railway and the Great Indian Peninsula Railway to continue their efforts to devise a satisfactory form of Company domiciled in India to take these railways over eventually on a basis of real Company

management. There have been certain definite advantages during a transition period in having a central authority with necessary powers to co-ordinate the work on railways and that the results have been satisfactory are borne ont by the fact that Indian failways have contifbuted 44 million pounds to General Revenues during 1927-28 and nearly 4 million pounds during 1928-29 in addition to paying in 31 million and 13 million pounds respectively during these two years to the Railway Reserve Fund. The inture organisation will, however, need careful organisation Experience in other countries has shown that difficulties arise in a Government fully responsible to the Legislature or under any constitution which imposed on the Railway Department the necessary restrictions which must apply as between ordinary departments of the State. The solution found in other countries such as Germany, Canada, Belgium, Anstria and elsewhere, where State ownership has thrown on the State the obligation to manage its own railways, has been to ereate by a statute an anthority charged with the management of the State Railway property with statutory prescription of the objects to be aimed at in such management and statutory division of railway profits between the State and the Railway Authority. This authority may take the form of a company as in Canada and in Germany or follow the simpler lines of a statutory commission On 1st January 1925 the East Indian Railway was amalgamated with the Oudh and Rohilkhand Railway and brought under direct State Management while on 1st July 1925 the Great Indian Penmsular Railway followed suit The Nann-Jubbulpore Section of the Fast Indian Railway was transferred to the Great Indian Pennisula Railway on 1st October 1925

On January 1st, 1929 the contract with the Burma Railways Company was terminated and the management taken over by the state. The purchase of this railway has entailed the payment to the Burma Railways Company of the sum of three millions stelling being the share capital originally contributed by the Company. The financial effort of taking over the line is estimated to be an increase of about half a core of upces in the net annual revenue to Government.

The purchase of the Southern Pumpab Railway of an aggregate length of about 927 miles worked by the North Western Railway was effected on the 1st January 1930. It is estimated that the financial result of the purchase which cost approximately 185 763 lakhs will be a gain to Government of about Rs. 47 lakhs a year

At the end of 1929-30 the Nizam's Guaranteed State Railways system which was the property of the company, was acquired and its in inagement taken over by The Exalted Highness the Nizam's Government and is now known as His Exalted Highness the Nizam's State Railway.

Separation of the Railway from the General Finances.—The question of the separation of the railway from the general finances was under consideration for some time and as a result of the recommendations of the Acworth Committee in 1921, the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision for the present.

The question was examined afresh in connection with the recommendation of the Retrenchment Committee in 1923, that the railways in India should be so worked as to yield an average return of at least 54 per cent on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out. A resolution was accordingly introduced in the Assembly on the 3rd March 1924, recommending to the Governor-General in Council.—"that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimates and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways:—

- (1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from tailways which shall be the first charge on railway earnings.
- (2) The contribution shall be a sum equal to live-sixths of 1 per cent. on the capital at charge of the railways (excluding capital contributed by Companies and Indran States and Capital expenditure on strategic Railways) at the end of the penultimate financial year plus one-fifth of any surplus profits remaining after payment of this fixed return, subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent. on the capital at charges surplus profits in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working, and the interest on capital expenditure on strategic lines.
- (3) Any surplus profits that exist after payment of these charges shall be available for the Railway administration to be utilised in—

(a) forming reserves for,

(\*) equalising dividends, that is to say, of securing the payment of the percentage contribution to the general revenues in lean years,

(11) depreciation,

- (iv) writing down and writing off capital,
   (b) the improvement of services rendered to the public.
  - (c) the reduction of rates.
- (4) The railway administration shall be cutitled, subject to such conditions as may be described by the Government of India, to borrow temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years.
- (5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement. The proposed expenditure will as at present, be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts

and working. Any reductions in the demand for grants for raflways resulting from the votes of the Legislative Assembly will not ensure to general revenues, i.e., will not have the effect of increasing the fixed contribution for the year.

(6) The Railway Department will place the estimate of railway expenditure before the Central Advisory Council on some date prior to the date for roilways."

This resolution was examined by the Standing Finance Committee in September and was introduced with certain modifications. The final natiodiced with certain monineations. The main resolution agreed to by the Assembly on September 20th, 1924, and accepted by Government differed from the original resolution in that the yearly contribution had been placed at 1 per cent. instead of 5/6th per cent. on the capital at charge and if the surplus remaining after this payment to General Revenues should exceed 3 crores, only and of the excess over 3 crores were to be transferred to the Railway Reserve and the remaining Ird was to accrue to General Revenues. At the same time a Standing Finance Committee for Railways was to be constituted to examine the estimate of railways expenditure and the demand for grants, the programme revenue expenditure being shown under a depreciation fund. This committee was to consist of one nominated official member of the Legislative Assembly as Chairman and 11 members elected by the Legislative Assembly from that body. This would be in addition to the Central Advisory Council which will include the Members of the Standing Finance Committee and certain other official and non-official members from the Legislative Assembly and Council of State. These arrangements were to be subject to periodic revision but to be provisionally tried for at least 3 years. They would, however, only hold good as long as the E. I. Railway and the G. I. P. Railway and existing State Managed Railways remain under State-management and if any contract for the transfer of any of the above to Company management was concluded against the advice of the Assembly, the Assembly would be at liberty to terminate the arrangements in this resolution.

The Assembly in an addendum recommended that the railway services and the Railway Board should be rapidly Indiannsed and that the stores for the State Managed Railways should be purchased through the organisation of the Indian Stores Department.

The period has now arrived for this separation to be reconsidered and revised but due to the economic depression the matter has been held in abeyance.

Re-organisation problems.—The growing complexity of railway administration in India and the evolution of new methods of controlling traffic have given a stimulus to the efforts of various railways to revise their organisations. The general direction in which this re-organisation is being considered is that of consolidation into one department of the operating or transportation work of the railway, including the rovision of power. This system which is commonly known as the divisional system, was first adopted on the Great Indian Peninsula Railway during 1922-23.

#### The Pope Committee.

During 1932-33 a Committee under the Chairmanship of Mr Pope, General Executive Assistant to the President of the L M. S. Railway was formed to investigate and inaugmate. a detailed analysis of every important activity of inlway operation. In addition to the specific recommendation that "job analysis" should be mitiated on all railways, the following recommendations were made --

- (1) The better use of Locomotives.
- (ii) The better use of Radway land
- (iii) Additional research and experiments
- (iv) Improved Workshop practice
- (v) More careful listing of surplus track. ecomponent and accommodation
- (ii) Possibility of reducing hot axles.

During the year under review four cases were referred to the Rates Advisory Committee

- (a) Complaint alleging quotation of preferential rates for firewood from certain
- (b) Complaint of undue preference in rates for impressed cotton
- (c) Complaint of unreasonable rates being charged on coal from certain areas,
- (d) Complaint regarding rates for rice from certain stations.

During 1932-33 six cases were referred for investigation

As a result of Mr. Pope's report regarding the As a result of Mr. Pope's report regaining on possibility of further economies on railways and in particular with reference to the report on of track to be electrified in India. This formed on the leading railways to conduct detailed in estigations. Reports show that the lem of eliminating the Reversing Station. The problem of eliminating the Reversing Station several occasions.

Railway savings amounting to Rs 22,704.

Mr. Pope returned to India in 1933-34 and prepared a second report based upon the progress of the work and on further possibilities of economy.

#### Rates Advisory Committee

The Rates Advisory Committee was constituted in 1926 to investigate and make recommendations to Government on the following <sup>|</sup> subjects .--

- (1) Complaints of undue preference:
- Complaints that rates are unreasonable in themselves.
  - (3)Complaints or disputes in respect of terninals,
- (4) The reasonableness or otherwise of any conditions as to the packing of articles specially hable to damage in transit or hable to cause damage to other merchandise,
- (5) Complaints in respect of conditions as to packing attached to a rate,
- (6) Complaints that Railways do not fulfil their obligations to provide reasonable facilities under Section 42 (3) of the Indian Radways Act

1932-33 five cases were referred for investigation and report.

#### Inauguration of the Main Line Electric Service, G. I. P. Railway.

The inauguration of the electrified main line section of the G I. P. Railway from Kalyan to detailed investigations (reprinted Augustalian and entering for the state of the st upon, that final survey operations became

Up-to-date figures of the results of working of other countries are not available, but the following table compares the latest available figures of average receipts per ton unle of those countries which have published statistics of operating tattos of toreign countries brings working later than 1919:—

An examination of the latest available figures of operating tattos of toreign countries brings out results not unfavourable to Indian Rail-Ways.

		ton mile
United States of America 1929		5.70
United Kingdom 1929		15.15
Japan 1927-28		7 • 26
Switzerland 1928	• •	20 · 25
South Australia 1928-29 Canadian Railways 1929	• •	17.25
India 1929-20	• •	5.75

In the case of receipts per passenger mile the figures for United States of America and India are as follows :-

United States of America 1929, 11:78 pies India 1929-30 ... while in England the present standard fare charged per mile third class is 18 pics.

From the above it will be seen that railway transportation of freight in India is one of the cheapest in the world and still more so for passenger traffic.

East Indian.

The East Indian Railway is one of the three railways sanctioned for construction as experimental mes under the old form of guarantee, The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Ranganj. It gives the only direct access to the port of Calcutta from Northern inda and is consequently fed by all the large railway systems connected with it. In 1880 the Government purchased the line, paying the share-holder by annuities, but leased it again to the company to work under a contract which was terminable in 1919

The contract was not terminated until January 1st, 1925, when the State took over the management. From July 1st, 1925, the Oudh & Rohilkland railway was amalgamated with it. 4,394 75

#### Great Indian Peninsula.

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent. and the first section from Rombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line via Poons to Raichur, where it connects with the Madras Railway, and to Jubbulpore where it meets the East Indian Railway. The feature of the line is the passage of the Western Chats, these sections being 151 miles on the Bhore Ghat and 91 miles on the Thul Ghat which rise 1.131 and 972 feet. In 1900, the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

The contract was terminated on June 30th, 1925, when the State took over the management. 3,727 29 Mileage open

### Madras and Southern Mahratta Railway.:

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula Railway and in a south-westerly direction to Caheut. On the exprise of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company, a system on the metre-gauge built to meet the famine conditions in the Southern Mahratta Country and released to a large Company called the Madras and Southern Mahratta Railway Company.

#### Oudh and Rohilkhand.

Oudh and Rohilkhand Railway was another of the lines constructed under the original form of guarantee. It began from the north bank of the Ganges running through Rohllkhand as far as Sahaianpur where it joins the North-Western State Railway. It was not until 1887 that the bridge over the Ganges was completed and connected with the East Indian Railway. To effect a connection between the metre-gauge systems to the North and those to the South of the Ganges, a third rail was laid between Bhuriwal and Cawnpore. The Company's contract expired in 1889 when the Railway was purchased by the State and has since been worked as a State Railway.

The working of this railway was amalgamated with that of the East Indian Railway from 1st July 1925.

#### The South Indian.

The South Indian Railway was one railways. It the original guaranteed Was begun by the Great Southern India Railway Company as a broad-gauge line; but was converted after the seventies to the metre-gauge. This line has been extended and now serves the whole of the Southern India, south of the south-west line of the Madras Railway. Between Tuticorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon via Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the 1st of January 1908.

#### INDIA AND CEYLON.

The South Indian Railway having been extended to Dhanushkodi, the southernmost point of Rameswaram Island, and the Ceylon Government Railway to Talaimannar, on Mannai Island, two points distant from each other about 21 miles across a narrow and shallow strait, the possibility of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand bank known as "Adam's Bridge," to supersede the ferry steamer service which has been established between these two points, is one of the schemes that has been investigated.

In 1913, a detailed survey was made by the South Indian Railway Company, and the project contemplates the construction of a cause way from Dhanushkodi Point on the Indian side to 'Talaimannar Point on the Ceylon side, a length of 20.05 miles of which 7.19 will be upon the dry land of the various lands, and 12.86 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried en a causeway which it is proposed to construct in the following way double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces 14 fect apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete ties, strits and chains. Behind the piles slabs of reinforced concrete will be slipped into position, the bottom slabs being sunk well into the sand of the sca bottom. Lastly, the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level, and the rais will be laid at that level. The sinking of the piles and slabs will be done by means of water jets. This causeway, it is expected, will cause the suspended sand brought up by the currents, to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram island and Mannar island.

#### Indo-Burma Connection.

The raids of the Emden in the Bay of Bengal in 1914, and the temporary interruption of communications between India and Burma, stimulated the demand for a direct railway con-Burma, nection between India and Burma. Government accepted the position and appointed Mr. Richards, M. Inst. C.E., to be the engineer-in-charge of the surveys to determine the best is not a practical financial proposition and both route for a railway from India to Burma, The may be ruled out of consideration.

The possibility of connecting India and Cey- coast route appears to be the best one but In by a railway across the bank of sand extend- at present would not be remunerative. This In the whole way from Rameswaram to Mannar would start from Chittagong, which is the has been reported on from time to time, and since 1895 various schemes having been suggested.

The South Indian Railway having been extended to Dhanushkodi, the southern most rout. and it crosses the Indo-Burma frontier, 94 miles from the town of Chittagong. For about 160 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kalidan river which drains 4,700 nules of country and even at a distance of about 30 miles from its mouth is more than hali a mile wide. About 260 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kaukkphu stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arrakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma. This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late Mr. R. A. Way many years ago. The Manipur route was estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,650, 3,600 and 8,900 feet long. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Hukong valley route is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Mani-pur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel 5,000 feet long at a height of 2,500 feet. There are less than fifty

#### COAL.

Most of the coal raised in India comes from | Singareni in Hyderabad, and in Central Prothe Bengal and Bihar and Orissa—Gondwana vinces but there are a number of smaller coal-fields. Outside Bengal and Bihar and mines which have been worked at one time or Orissa the most important mines are those at another.

of the decrease in production of coal from the tons in the pulput from the Pench Valley, peak production of 23,803,048 fors in 1930, whilst the output from Korea State, which the decrease was only 304,224 fors or about showed an initial production of 3,517 fors in 1,8 per cent., as contrasted with decreases of 1930, using to 31,351 tons in 1934, 113,858 tons 8.8 per cent and 7.2 per cent, in 1931 and 1932 respectively. This decrease was due manily to Bhar and Orissa and Bengal with smaller falls in Hyderabad, Bauchistan, Assam, and Rajputana, partially balanced by a very large increase in the production of the Central Provinces, with smaller increases in the Pumpab and Central India. The substantial decrease in Bengal and Bihar and Orissa in 1933 is in confinuation of the heavy decreases of 1931 and 1932. In 1932 this fall was shared by all the fields except Talcher, which showed a substantial increase of 111,274 tons During 1933, however. During 1933, however, five fields showed increases of which Talcher was responsible for 62,953 tons and Guidih for 52.681 tons, the increases for Jainti, the Rajma-52,681 tons, the increases for Janint, the Rajma-hal Hills and Rampin being trivial. The decrease was shared by the remaining four fields as follows—Jharia, 536,3334 tons, Ramganj, 153,394 tons; Karanpina, 65,690 Bengal, Bilai and Orssa, the Central Provinces tons, and Bokaro, 44,109 tons. In Central Bengal, Bilai and Orssa, the Central Provinces and the Punjab, for which such figures are lindia there was, in contrast to the continuous

Although there was a continuance during 1933 | was another large increase amounting to 146,362 in 1932, amounted to 264,257 tons in 1933, representing the very large increase of 150,399 tons In addition, Ballarpin showed an increase of 38,923 tons In Hyderabad State, while the Singarent field was resposible for a decrease of some 74,000 tons, and Sasti for a decrease of over 11,000 tons, the Tindur coalfield showed an increase from the initial output of 126,471 tons from 1932 to 184,165 tons in 1933

A feature of the last 10 years has been the very large expansion of the output from the Central Provinces from 679,081 tons in 1924 to 1,500,911 tons m 1933 This has undoubtedly accentuated the fall in output of Bihar and Orissa from 14,105,529 tons in 1924 to 11,257,984 tons in 1933

In 1929 the statistical position at the end of decreases of the last 4 years, an increase in the tons. In 1930 the smaller increase in production output from Umaria of 6,085 tons; in addition, was not accompanied by another improvement there was an increase of 6,195 tons from the in the statistical position, but by a slight worsen-Soliagpin field. In the Central Provinces there mg, namely an increase of stock amounting to

141.766 tons. In 1931, in spate of a large full in (slight reduction of stocks may be symptomatic deteriorated still buther with an increase of production to demand stocks of 428 334 tons, and in 1932 this dest. The decreased output of 1.8 per cent, in 1933 terioration, continued, so that in spite of a was accompanied by a decrease of 10 1 per cent decreased output of over 12 bulbon tons stocks in the total value of the coal produced in India. mereased by 250 629, tons. During: 1933 the from: Rs. 6,80 96,604 (£5,120 045) in: 1932 to position showed no substantial change, but the Rs. 6,41 86 083 (£4,600,457) in 1933

production of over 2,000 000 tons the position of a tendency towards a better adjustment of

### IRON ORE.

Bengal and Bihar and Orissa are the only pro- including the surface lateritisation, are almost vinces in India in which iron ore is mined for exactly reproduced in the iron-ore deposits of smelting by European methods. Iron smelting, however, was at one time a widespread industry in India and there is hardly a district away from the great alluvial tracts of the Indus, Gauges and Brahmanutra in which slag heaps are not found. The primitive iron smelter finds on difficulty in obtaining sufficient supplies of ore from deposit that no European Tronmaster would regard as worth his serious consideration Early attempts to introduce European processes for the manufacture of pig-iron and steel were recorded in 1830 in the South Arest District Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal The site of the Barakar Iron-Works was originally chosen on account of the proximity of in 1932, there was no production of pig-non by both coal and ore supplies. The outcrop of the Bengal Iron Co., then output of products from stone shales between the coal-bearing Bury-made from pig-non in 1935 amounted to 12,011 kar and Ranigani stages stretches east and west from the works, and for many years the elay n justone nodules obtainable from this formation formed the only supply of ore used in the blast furnaces Recently magnetite and hematite have been obtained from the Munbhum and Singlibhum districts, and the production from the last named district has largely replaced the supplies of ore hitherto obtained near the fron works. The Bengal Iron and Steel Company, Limited, have now given up the use of ores obtained from the neighbourhood of Barakar and Rangan; and are now obtaining most was accompanied by a rise in the quantity of their ores from the Kolhan Estate, Singh-exported from 248 396 tons in 1932 to 372 015 blum. Some years ago the Bengal Iron and Steel tons in 1933. Japan is the principal consumer Co., Ltd., secured two deposits of iron-ore in of Indian pig-iron, the proportion taken rose from Saranda (Singhbhum) forming parts of two large | 41/5 per cent | in 1932 to 48/3 in 1933 whilst the hill masses known as Noth Barn and Buda Burn Jactual amount rose by 76 per cent. There was also respectively. Recent prospecting in this part of a large merease in exports to the United States of Singhbhum has led to the discovery of numerous additional deposits of iron-ore, the extension of an increase of 7,500 tons to China, with small which has been traced into Keonjhar and Bonal decreases to the Pinted Kingdom and Hongkong which has been traced into Keonjiar and Bona; the export value per fon of pig-non fellirom Rs sates in Crissa, a total distance of some 40 a portion of Notu Birri, the deposit has been copened up, and now feeds the Barakar ironwork. Pansira Birri rises to over 2,500 feet above sea Pansira Buru rises to over 2,500 feet above sea level, the low ground on the west side being at it. and is hiplates wholly manufactured in about 1,100 feet above sea-level. The upper-limitsh ludia from material wholly or mainly most 400 to 450 feet of this hill has now been produced from Indian from or and complying most 400 to 450 teet of this nill has now been photocolar from thath non-one and comprising opened up, and the workings indicate the exist.

with specifications approved by the Railway ence of a deposit about a quarter of a mile long, perhaps 400 feet thick and proved on the dip for substantial portion of the component parts of about 506 feet. The ore body appears to be which had been manufactured in British India interbedded with the Dharwar slates, from which and the was repealed by the vet No. III of 1927. interbedded with the Duarwar states, from which it is separated by banded homatice-jaspers. The land the payment of bounties consequently ore itself is high-grade micaceous homatic coased on the 31st March 1927, the industry is, often lateritised at the outcrop. Cross-cuts however, protected to a certain extent by varying into the interior of the deposit show that the tauths on different classes of imported steel. An hommatic becomes very friable not fair below the Act is now before the Legislative Assembly proouterop. In fact the characteristics of this ore, posing considerable modification of the tauths.

Goa and Ratnagiri. The Tata Iron and Steel Company at Sakchi possesses slightly richer and purer ore-bodies in the Raipur distriet, supplies of one are at present drawn from the deposits in Maymbhant The ore-deposits have all been found to take the form of roughly Inticular leads or bodies of hemitite, with small proportions of magnetite, in close assocrition with granite on the one hand and grandtic rocks on the other

The production of iron ore in India rose from 699,931 tons in 1932 to 793,953 tons in 1933, with increases in the production of steel (meluding steel rails from 430, 33 tons in 1932 to 505,429 tons in 1933, and of terro-manganese from 366 tons in 1932 to 7-725 tons in 1933 tons of sleepers and chars, and 23,263 tons of pipes and other eastings against 3,371 tons and 17,266 tons, respectively in 1932. The Indian from Steel Co increased their production of pignon from 195,700 tons in 1932 to 249,079 tons in 1933. The output of pig-non by the Mysore Iron. Works rose slightly from 14,683 tons in 1932 to 14.805 tons in 1933. The total production of pig-iron in India rose from 913,314 tons in 1932 to 1 057 537 tons in 1933

Exports of pig-iron The increase in the moduction of pig-iron in India recorded above America of about 166 per cent (44,973 tons) and

#### MANGANESE ORE.

Vizagapatam district, and from an output of disistions fall in 1932 to 212 601 tons with a to 92,008 tons in 1892, the production rose rapidly value of \$140.022 in 1933 the output rose to 92,008 tons in 1900 when the richer deposits sightly to 218 307 tons but the value to 12 to 12 the Central Provinces were also attacked, \$123,171. The scare the smallest quantities and and are now yielding a larger quantity of ore than the Vizagapatam mines. The most important deposits occur in the Central Provinces, Madras, Central India, and Mysor -the largest supply coming from the Central Provinces. The uses to which the ore is put are somewhat varied. The peroxide is used by glass manufacturers to destroy the green colour in glass making, and it is also used in porcelain painting and glazing for the brown colour which it yields. The ore is now used in the manufacture of ferro-manganese for use in steel manufacture. Since 1904, when the total output was 150,190 tons, the progress of the industry has been remarkable owing to the high prices prevailing.

Record Output in 1927.—Before the year 1926, the record production of manganese-ore 'in India took place in 1907, when 902,291, tons were raised. In 1926, the output rose to 1,014,928, tons - valued at \$2,463,191, 1,6,6 Indian ports, the rise in output was, however accompanied by a decrease in value. In 1927 the production tose to the lighest figure yet recorded, 1,129,353 tons accompanied by a rise in value to the peak figure of \$2,703,968 to b Indian ports. During the year 1928 the upward industry commenced in the Central Proxinces, tendency was not mainfained, the output when the output was 35 356 tons. During 1932 falling to 978,449 tons valued at \$2.198.895 Fo bound 1933 the majority of munes in the Central fudian ports. In 1929 the output ross again Provinces were closed including several names slighly to 994,279 tons, but the value fell heavily that has never been closed since the commenceto £1,571 030 In 1930 the output fell subment of work in 1900 and 1901. There was a stantially to \$29,949 tons with a heavy tall in total cossition of production in the Nagpur value to £1,200,236. In 1931 a still more district and almost total cossation in Bhandara.

This industry was started some thirty (serious fall took place to 537.844 tons with a years ago by quarrying the deposits of the value of \$726.95. This was followed by a values reported since 1900, when the output was 120 891 tons valued at \$122 831. In 1905 the output was 247 427 tons valued at \$223 482. since when the smallest production was 450 416 tons in 1915 valued at 4929 546, whilst the smallest value was in 1909 when a production of 644,660 tons was valued at £603,908. The full magnitude of this catastrophe to the Indian manganese industry is perhaps best realised from the fact that whilst the quantity of the production m 1933 was a little over one-fifth of that of the peak year of 1927, the value was less than one twenty-second part of the value of the 1927 production. In fact in none of the major hidian mineral nolastrics have the effects of the slump been so seriously felf as in the mangainese industry.

The slight mercase in 1933 is due to increases m San bir State (22/237 tons) (lyconghar State (15 499 tons) Vizagapatem (8 619 tons) and Singliblium (5 181 tons) with small outputs from Bonai State and Kinnool largely balanced by decreases in the Central Provinces. In the Central Provinces the production fell from 302 344 tons in 1931 to 77 186 tons in 1932 and 28,789 tons in 1933, which is less than the output of 1900, the year in which the manganese

#### GOLD.

The greater part of the total output of gold year and reached 8,145 ounces in 1909, but in India is derived from the Kolar gold field tell in subsequent years until in 1922 in Mysore. During the last decade the production of this mine reached its highest point in 1905 when 616,758 ounces were raised. In 1906 the quantity won was 565,208 ounces and this figure fell to 535,085 ounces in 1907. The figures for the latter years reveal a small improvement. The Nizam's mine at Hutti in Hyderabad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1903. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur | secular decline in the total Indian gold production district of Madras The Dharwar mines gave an output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910; the amount being 2,532 ounces, valued at Rs. 1,51,800. Gold mining was carried on in the North Arcot district of Madras from 1893 till 1900, the highest yield (2,854 ounces) being obtained in the year 1898. The Kyaukpazat mine the pay chute was lost and the mine closed to note that the output of 1921, which was down. In 1902 dredging operations were valued at £2.050.575 a hours a second which was started on the Irrawaldy wines. started on the Irrawaddy river near Myitkyina, and 216 ounces of gold were obtained in 1904;

tell in subsequent years until in 1922 it was no more than 24 oz. The small quantity of gold-produced in the Punjab, the Central Provinces, and the United Provinces is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way. There was a trivial fall in the total Indian gold production from 330,488 8 ozs. valued at Rs. 2,08,01,943 (£1,540,885) in 1931 to 229,681 7 ozs valued at Rs. 2,53,51,438 (Ul,906 123) m 1932 In 1931 the gradual was temporarily arrested with an output of 330,488 8 ozs valued at Rs 2,08,01,943 330,488 8 ozs valued at Rs 2,08,01,943 (VI.540,885), followed by a trivial fall again in 1932, when the output was 329,684 7 ozs valued at Rs 2 53,51,438 (VI.906,123). In 1933 there was an increase to 336,108 3 ozs, valued at Rs 2,76 40,071 (£2,078,201) This is a result of the stimulus of the high price of gold, the value of the 1933 output being the highest in

The average number of persons employed on the amount steadily increased from year to the Kolar Gold Field during 1933 was 20 263

## PETROLEUM.

Petroleum is found in India in two distinct areas—one on the east, which includes Assam, Burma, and the islands off the Arakan coast. Isirma, and the islands off the Arakan coast. This belt extends to the productive oil fields of Sumatra, Java and Borneo. The other area is on the west, and includes the Punjab and Baluchistan, the same belt of oil-bearing rocks being continued beyond the borders of British India to Persia. Of these two the eastern area is by far the most important, and the most successful oil-fields are found in the Irrawaddy Valloy. Venengraying is the oldest and most. Valley. Yenangyaung is the oldest and most developed of these fields. Native wells have been at work here for over 100 years, and to 1886, prior to annexation of Upper Burma, the output is estimated to have averaged over 2 million gallons a year. Drilling was begun in 1887. The Yenangyat field yielded a very small supply of petroleum before 1891, in which year drilling was started by the Burma Oil Company. Singu now holds the second place among the oil-fields of India. Petroleum was struck at the end of 1901, and in 1903, 5 million gallons were obtained. In 1907 and 1908 the production of this field was 43 million gallons, and after a fail to 31‡ millon gallons in 1910 it rose to 56‡ million gallons in 1912. Several of the islands off the Arakan coasts are known to contain oil deposits but their value known to contain oil deposits but their value is uncertain. About 20,000 gallons were obtained from the eastern Barongo Island near Akyab, and about 37,000 gallons from Ramri Island in the Kyaukpyu district during 1911. Oil was struck at Minbu in 1910, the production for that year being 18,320 gallons which increased to nearly 4 million gallons in 1912. The existence of oil in Assam has been known for many years and an oil suring was known for many years and an oil spring was struck near Makum in 1867. Nothing more, however, was done until 1888, and from that year up till 1902 progress was slow. Since that year the annual production has been between 2‡ and 4 million gallons.

On the west, oil springs have been known for many years to exist in the Rawalpindi and

some small oil springs have been discovered, attempts to develop them have not hitherto been successful.

The world's production of petroleum in 1926 amounted to nearly 150 million long tons, of which India contributed 0 72 per cent. In 1927, this figure jumped to some 172 million long tons, of which the Indian proportion, on a practically static ary production, fell to 0.64 per cent. In 1928 there was another substantial rise in the world's production, which reached the figure of over 181 million tons. In 1929, there was another jump to over 202 million tons, but in 1930 the world's production fell to about 1931 million tons, in 1931 to about 187 million tons, and in 1932 to about 179 million tons, whilst in 1933 the production rose again to about 198 million tons. Decreases were shown by Columbia, Trinidad, India, Germany, Egypt and Canada All other important producers showed an increase in production, by far the largest amount being due to the United States. The United States contributed 62 5 per cent. of the world's supply in 1933, Russia 10.6 per cent. and Venezuela 8 3 per cent. In 1928, India contributed 0 64 per cent, which fell to 0 60 per cent, in 1929 and rose to 0.62 in 1930 0.63 per cent. in 1929 and rose to 0.62 in 1930 0.63 per cent. in 1931 and 0.64 per cent in 1932, and fell again to 0.62 per cent in 1933; her position on the list of petroleum producing countries fell trom 11th in 1920 to 12th in 1930 to 1933, her place being taken by Trinidad.

The production of petroleum in India (including Burma) fell slightly from 308,606,031 gallons in 1932 to 306,009,022 gallons in 1933. The degree in 1932 represents a considerable

decrease in 1932 represents a considerable decrease in the output of Assam and the Puniab. and of a small proportionate decrease in the production of Burma. This decrease in output in 1933 was accompanied, however, by a large mercase in value amounting to Rs 1,18,24,818 (£889,084), or 28 3 per cent., an increase much in excess of the decrease of 1932 brought about

by the world depression.

The amount of petrol produced from natural for many years to exist in the Rawalpindi and gas during the year was 8,729,928 gallons, of other districts in the Punjab. In Baluchistan which 8,172,197 gallons were produced in geological conditions are adverse, and though Burma and 557,731 gallons in the Punjab.

Amber, Graphite and Mica.—Amber is found in very small quantities in Burma, Graphite from Mawchi, calculated to be the proportion is found in small quantities in various places of tin-ore in 3,050 tons of concentrates derived but little progress has been made in mining except in Travancore. The total output in 1929 was 39 tons. India has for many years been the leading producer of mica, turning out more than half of the world's supply. In 1914, owing to the war, the output was only 38, 189 cwts. compared with 43,650 cwts. in 1918. Owing to necessary restrictions with regard to the export of mica, the output fell off considerably in the year 1915, but subsequent demand in the United Kingdom for the best grade of ruby mica led to a considerable increase in production during the following years.

There was a marked rise in the declared production of mica from 32,713 cwts. valued at Rs. 14,35,401 (£107,925) in 1932 to 41,075 cwts valued at Rs. 16,82,045 (£126,470) in 1933. As has been frequently pointed out, the output figures are uncomplete, and a more accurate idea of the size of the industry is to be obtained from the export figures. In the years 1926 and 1927 the export figure was approximately double the reported production figure, whilst in the years 1928 and 1929 the quantity exported was more than double the reported production. In 1930 the recorded exports were, however, only some 57 per cent, in excess of the reported production, in 1931 38 per cent, in 1932 43 per cent., and in 1933 some 45 per cent., in excess.

The United States of America and the United Kingdom, which are the principal importers of Indian mica, absorded respectively 24.0 per cent and 47.6 per cent during 1932, and 34.3 per cent. and 40.8 per cent. during 1933. Germany tent. and 40.8 per cent. during 1933. Germany took 10 6 per cent. and 10.7 per cent. respectively, of the total quantities exported during the years 1932 and 1933. The average value of the exported mica decreased slightly from 18. 71.2 (£5.4) per cwt. in 1932 to Rs. 70.7 (£5.3) per cwt in 1933. The exports rose from 47,021 cwts. valued at Rs. 33,48,943 (£251,800) in 1932 to 57,717 cwts valued at Rs. 40,92,033 (£307,671) in 1933 The value for 1932 is the lowest total value recorded since 1915-16 when the value of the mica exports was £208,496.

Tin, Copper, Silver and Lead.—Following a series of years of practically continuous increase, a slight decrease in the production of tin-ore in Burma was reported for the year 1931, during which the output amounted to 4,255.2 tons valued at Rs. 35,07,380. In 1932, however, there was again an increase in production to 4,525 tons valued at Rs. 45,09,995, and in 1933 to 4,960 4 tons valued at Rs. 70,89,994 (£533,082) This is the highest quantity and total value yet recorded in any one year. The considerable increase in the total value is, of course, mainly due to the rise in the price of the metal resulting from the tin restriction scheme in operation in the five leading tin-producing countries Malaya, Netherlands East Indies, Bolivia, Nigeria and Siam, a scheme to which India is not an adherent. The increase in output of some 435 tons is the balance of an increase from Mergui and Mawchi in the Southern Shan States and a decrease from Milling operations were suspended at Mawchi in August 1927 pending the Installation of additional plant and turther development. Milling was resumed in February 1930 and this explains the large increases of 1930 to 1933.

from mixed wolfram-scheelite-cassiterite-ore; these concentrates are assumed to contain 43 per cent. of wolfram and 57 per cent. of cassiterite. There was no reported output of block tin.

Imports of unwrought tin fell from 49,279 cwts. valued at Rs. 47,50,341 (£357,168) in 1932 to 41,655 cwts. valued at Rs. 52,96,454 (£398,230) in 1933; over 97 per cent. of these imports came from the Straits Settlements.

In contrast with the increase in the production of silver from the Bawdwin mines of Upper Burma, amounting to 1,400,291 cos. recorded during the four years, 1925 to 1928, the following years 1929, 1930 and 1931 were marked by decreases amounting to 124,211 cos., 226,311 cos., and 1,153,806 cos. respectively. In 1939 and 1933 however there were small In 1932 and 1933, however, there were small in 1932 and 1933, nowever, there were sman increases again, amounting to 98,556 ozs and 53,504 ozs, respectively. These variations in quantity were accompanied by a small fall of value in 1929, marked falls in 1930 and 1931, and a marked rise in 1932, and a further rise in 1933. The output of silver obtained as a byeproduct from the Kolar gold mines of Mysore showed a fall of some 1,600 ozs The amount of silver bullion and coin exported during the year was 58,328,890 ozs. valued at Rs. 7,00,38,590 (£5,266,059) as compared with 34,364,148 ozs. valued at R4, 4,15,61,144(£3,124,898) during 1932.

The production of lead-ore at the Burma Corporation's bawdwin mines in Burma, in reversal of the downward trend since 1930, increased from 372,586 tons in 1932 to 454,791 tons in 1933, and the total amount of metal extracted from 71,202 tons of lead (including 642 tons of antimonial lead) valued at Rs. 1,09,95,587 (£826,736) in 1932 to 72,045 tons (including 1,485 tons of antimonial lead) valued at Rs 1,15,61,915 (£889,317) in 1933. The quantity of silver extracted from the Bawdwin ores rose slightly from 5,998,958 ozs. valued at ones rose singinaly from 5,997,990 cas. Valued at Rs. 62,32,915 (£468,640) in 1932 to 6,054,047 cas. valued at Rs. 55,74,695 (£494,338) in 1933. The value of the lead per ton rose from Rs. 154.5 (£11.6) to Rs. 160.5 (£12.07) whilst the value of the silver per ounce rose from Rs. 1-0-7 (18.75d.) to Rs. 1-1-5 (19.6d.) in the year under The ore reserves in the Bawdwin mine review. as calculated on the 1st of July, 1933, totalled 4,133,792 tons, aganst 4,126,179 tons at the end of June, 1932, with an average composition of 25.5 per cent. of lead, 15.5 per cent. of zine, 0.68 per cent. of copper, and 19.6 ozs. of silver per ton of lead. Included in this reserve are 37,000 tons of copper-ore. During the year development work in the Meingtha section, discovered in 1930, continued to yield satisfactory results

Magnesite. - The output of magnesite showed an increase of 1,342 tons, accompanied by an increase in value of Rs. 24,925 (£1,874). The increase was due to a large increase from Mysore State, partially balanced by a decrease in the output of the Salem district, Madras.

Zinc.—A monograph on zinc ores issued by the Imperial Institute in 1917 says that during the past fifty years zinc ores have received but little attention in India, and no production was recorded until 1913. The

production of zinc concentrates by the Burma Gem Stones.—The only precious and semi-corporation, Limited, in the Northern Shan states, fell from 51,455 tons valued at Rs the diamond, ruby, sapphire, spinel, tourmaline 17,22,528 in 1931 to 44,484 tons valued at garnet, rock-crystal, agate, cornellan, jadette Rs. 15,09,298 in 1932. The slight rise in the and amber The production of diamonds in value per ton is parallel with a similar rise in the price of spelter. The production of zince at Rs 72,189 (£5,428) in 1932. O 2,342 carats concentrates by the Burma Corporation, Limited, valued at Rs 63,695 (£4,789) in 1933. Of in the Northern Shan States, toes to 61,432 tons this latter production 2,271 carats were produced at Rs 72,189 (£5,428) in 1933. Of in the Northern Shan States, toes to 61,432 tons. production of zinc concentrates by the Burma; oncentrates by the Burma Corporation, Limited. In the Northern Shan States, 10se to 61,432 tons this latter production 2,271 carats were produced in the Northern Shan States, 10se to 61,432 tons this latter production 2,271 carats were produced walled at Rs. 30,82,944 (E231,800) recovering in Panna State and the remainder in Charkhari, thereby nearly all the ground lock since 1928 (output 64,122 tons), though the value is still greatly below the value in the peak year manely £559,412, in 1928. The slight rise in the value is the price for the production of the pro ing year.

Copper.—In 1931 the mine output was 153,636 long tons of copper-ore valued at Rs 22,71,940, 161,563 short tons of ore were treated for a production of 4,069 long tons of refined copper. 1,668 tons of this were sold in the Indian market at an average price of Rs. 673 per ton. In addition there was a production of 3,637 tons of yellow metal, the average selling price in India being Rs 719 per ton.

Operations commenced on a revenue basis on January 1-t, 1929. During that year the ore moduced amounted to 76,831 long tons valued at Rs. 14,8,746 (£108,862) Of this 75,174 short tons were treated in the mill and smelter, with the production of 1,635 long tons of refined copper ingots and slabs. The copper was sold entirely in India at an average price of Rs. 1,200 per long ton. In 1930 the output increased to 123,749 long tons of copper-ore valued at Rs. 24,35,571 (£180,413). Of this 134,162 short tons were treated in the mill and smelter and 1,625 short tons sent direct to the smelter with the production of 2,974 long tons of refined copper, of which 2,157 tons were sold In the Indian market and 540 tons were consumed in the new rolling mill, which was completed in July 1930, with the production of 712 tons of

lode parallel to that at Mosaboni is being opened up. During 1933 the mme output increased to 201,515 long tons of copper-ore from Mosaboni and 207 long tons from Dhobani, making a total of 201,722 long tons, valued at Rs 22,12,966 (£166,388), against 175,010 long tons of copper ore in 1932 valued at Rs. 25,09,080 (£188,652) 203,736 short tons of ore were treated in the unll and the production of refined copper amounted to 4,800 long tons against 5,443 tons in the previous year. 3,774 tons were consumed in the rolling mill and 1,317 tons were sold in the Indian market at an average price of Rs. 599 per ton Operations in the rolling mill resulted in the production of 6.143 long tons of yellow metal

1933 amounted to 686,402 short tons with an on account of their high altitude they are worked average assay value of 3.06 per cent. of copper. only occasionally.

Gem Stones .- The only precious and semi-

review amounted to 64,050 tons valued at Rs 32,02,500 (£240,789) against, 49,950 tons valued at Rs 24,97,500 (£187,782) in the pieced-ing year. organisation left in charge of the mines, however, made good use of its opportunities with the result that the value of the output in 1926 exceeded that of the previous year by over a lakh of rupees. This encouraging result was effected by a rigorous economy and an extension of a systen of co-operation with local miners, and was assisted by some good finds of sapphires in the Kyaungdwin mine—the only one still worked by European methods.

During 1927, however, production fell in value by over 1½ lakhs of rupees, due mainly to a decrease in the value of the sapphires and spinels produced, there having been a slight increase in the value of the rubies. During 1928, there was another very large decline in value. amounting to over a lakh of rupees, due to a severe drop in the value of the sapphires produced as before. There was a slight increase in the value of the rubies. The value of the 1929 production was slightly above that of 1928, due to a considerable increase in the value of the rubies found, largely balanced by another large fall in the value of sapplires produced. In 1930 there was a further substantial fall in production and in total value, though the value per carat of the sapphires produced is the highest recorded for many years. Judging from reports in the Rangon Times this is due to the opening up by the Burma market in Calcutta

market in Calcutta

Since then in spite of falling prices the production of both mine and surelter has continued to expand. In addition during 1933 there was an initial production of ore from Disaboration.

Since the liquidation of the Burma Ruby Mines, Limited, and the final cessation of the operations of this company in 1931, reliable statistics of production of gem stones in the Mogok Stone Tract have been unobtainable, Work is still continued by local miners but of this no statistics are available; in addition a certain amount of work is being done under extraordinary licenses. For 1932 no returns are available except that a fine ruby of 17 carats was found at Channggyi near Mogok, and a fine sapphire of about 90 carats and a good star sappling of 453 carats were mined at Kathe For 1933 the only return is of 1,103 carats of rubies from Kathe.

In addition the production was reported from Udhampur, Kashmir State of 25,100 tolas tribution of which was sold in India at an average (1.434.285 carats) of sapphire with corundum valued at Rs. 631 per ton.

The total ore reserves at the close of the year deposits of Kashmir have long been known, but

#### SALT.

There was a substantial increase in the total output of salt, amounting to some 102,000 tons, shared by Madras (43,954 tons), Northern India (19,860 tons), Aden (16,888 tons), Burma (10,705 tons), and Bombay and Sind (10,124 tons,) Imports of salt into India decreased largely by 155,923 tons, all the countries of origin showing decreases excepting Germany

#### Stock Exchanges.

There are about 475 Share and Stock Brokers in Bombay. They carry on business on the Brokers' Hall, bought in 1887 from the funds of the Share and Stock Brokers' Association formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Presidency of Bombay. Their powers are defined by rules and regulations framed by the Board of Directors The Poard has the power to stop, business in times of emergencies. The official address in Apollo Street known as the Bombay Stock

of the Secretary is Dalal Stree, Fort, Bombay.

At first the admittance fee for a broker was Rs. 5 which was gradually raised to Rs. 7.000. The fee for the Bioker's card has increased In 1921 a number of cards were sold at Rs. 40 000 each and the proceeds were employed to purchase an adjoining building for the extension of the business. The present value of the card is about Rs. 11,000.

production of zinc concentrates by the Burma; Corporation, Limited, in the Northern Shan states, fell from 51,455 tons valued at Rs the diamond, ruby, sapphire, spinel, tourmaline 17,23,528 in 1931 to 44,484 tons valued at Rs, 15,09,298 in 1932. The slight rise in the and amber The production of diamonds m value per ton is parallel with a similar rise in Central India rose trom 1,254.1 carats valued value per ton is parallel with a similar rise in Central India rose from 1,254.1 carats valued the price of speiter. The production of zince at 18, 72,189 (£5,428) in 1932, to 2,342 carats concentrates by the Burma Corporation, Limited, valued at 18, 63,695 (£4,789) in 1933. Of in the Northern Shan States, rose to 61,432 ton; this latter production 2,271 carats were produced. valued at Rs 30,82,944 (£231,800) recovering in Panna State and the remainder in Charkhari, thereby nearly all the ground lost since 1928 (output 64,122 tons), though the value is still greatly below the value in the peak year namely £559,412, in 1928. The slight rise in the value 2559,412, in 1928. The slight rise in the value per ton is parallel with a similar rise in the pire of spelter. The exports during the year under of spelter. The exports during the year under review amounted to 64,050 tons valued at Rs. 32,05.00 (£240,789) against, 49,950 tons valued at Rs. 24,97,500 (£187,782) in the preceding review and the mines were offered for sale in September, 1926. The skeleton valued at Rs. 24,97,500 (£187,782) in the preceding review. ing year.

Copper.—In 1931 the mine ontput was 153,636 long tons of copper-ore valued at Rs 22,71,940, 161,563 short tons of ore were treated for a production of 4,069 long tons of duction of 3,037 tons of yellow metal, the average selling price in India being Rs. 719 per ton.

Operations commenced on a revenue bisson January 1st, 1929. During that year the ore produced amounted to 76,831 long tons valued at Rs. 14,58,746 (£108,862) Of this 75,174 short tons were treated in the mill and smelter, with the production of 1,635 long tons of refined copper ingots and slabs. The copper was sold entirely in India at an average price of Rs. 1,200 per long ton. In 1930 the output increased to 123,749 long tons of copper-ore valued at Rs. 24,35,571 (£180,413) Of this 134,162 short tons were treated in the mill and smelter and 1,625 short tons sent direct to the smelter with the production of 2,974 long tons of reflued copper, if which 2,157 tons were sold in the Indian market and 540 tons were consumed in the new rolling mill, which was completed in July 1930, with the production of 712 tons of yellow metal (brass) sheets, which found a ready market in Culcutta.

Since then in spite of falling prices the production of both mine and smelter has continued to The find of a ruby of 100 carats was also reported. expand In addition during 1933 there was an initial production of ore from Dhobani where a lode parallel to that at Mosabom is being opened During 1933 the mine output increased to 201,515 long tons of copper-ore from Mosaboni and 207 long tons from Dhobani, making a total of 201,722 long tons, valued at Rs 22,12,966 (£166,388), against 175,010 long tons of copper ore in 1932 valued at Rs. 25,09,080 (£188,652) 203,736 short tons of ore were treated in the inili and the production of refined copper amounted to 4,800 long tons against 3,443 tons in the to 4,800 long tons against 3,445 tons in the sapphire of about 90 carats and a good star problem of the sapphire of about 90 carats and a good star rolling mill and 1,317 tons were sold in the Indian market at an average price of Rs. 599 per ton Operations in the rolling mill resulted in the production of 6.143 long tons of yellow metal the whole of which was sold in India at an average price of Rs. 631 per ton.

average assay value of 3.06 per cent. of copper.

Gem Stones.-The only precious and semi-Ajangarh, and Bijawar.

A severe decline in the output from the Mogok ruby mines of Upper Burma in 1924, followed made good use of its opportunities with the result that the value of the output in 1926 exceeded that of the previous year by over a lakh of rupees. This encouraging result was effected by a rigorous economy and an extension refined copper. 1,668 tons of this were sold of a system of co-operation with local miners, in the Indian market at an average price of and was assisted by some good finds of sapphires Rs. 673 per ton. In addition there was a pro-in the Kyaungdwin mine-the only one still

During 1927, however, production fell in value by over 1½ lakhs of rupees, due mainly to a decrease in the value of the sapphires and spinels produced, there having been a slight increase in the value of the rubles. During 1928, there was another very large decline in value, amounting to over a lakh of rupees, due to a severe drown the value of the samphires produced. severe drop in the value of the sapphires produced as before. There was a slight increase in the value of the rubies. The value of the 1929 production was slightly above that of 1928, due to a considerable increase in the value of the rubles found. largely balanced by another large fall in the value of sapphires produced. In 1930 there was a further substantial fall in production and in total value, though the value per carat of the sapphires produced is the highest recorded for many years. Judging from reports in the Rangom Times this is due to the opening up by the Burma Ruby Mines, Ltd., of the new Pagoda mine at Kathe leading to the find of a fine sapphire of 630 carats and a star sapphire of 293 carats.

Since the liquidation of the Burma Ruby Mmes, Limited, and the final cessation of the operations of this company in 1931, reliable statistics of production of gem stones in the Mogok Stone Tract have been unobtainable. Work is still continued by local miners but of this no statistics are available, in addition a certain amount of work is being done under extraordinary licenses For 1932 no returns are available except that a fine ruby of 17 carats sapplure of 453 carats were mined at Kathe. For 1933 the only return is of 1,103 carats of rabies from Kathe.

In addition the production was reported from Udhampur, Kashnur State of 25,100 tolas the of Rs. 631 per ton.

The total ore reserves at the close of the year deposits of Kashmir have long been known, but 1933 amounted to 686,402 short tons with an on account of their high altitude they are worked only occasionally

#### SALT.

There was a substantial increase in the total output of salt, amounting to some 102,000 tons, shared by Madras (43,954 tons), Northern India (19,860 tons), Aden (16,888 tons), Burina (10,705 tons), and Bombay and Sind (10,124 tons,) Imports of salt into India decreased largely by 155,923 tons, all the countries of origin showing decreases excepting Germany

#### Exchanges. Stock

There are about 475 Share and Stock Brokers in Bombay. They carry on business on the Brokers' Hall, bought in 1887 from the funds of the Share and Stock Brokers' Association formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Presidency of Bombay. Their powers are defined by rules and regulations framed by the Board of Directors and approved by the general body of Brokers. The Poard has the power to stop business in times of emergencies. The official address in Apollo Street known as the Bombay Stock

of the Secretary is Dalal Stree, Fort, Bombay.

At first the admittance fee for a broker was Rs. 5 which was gradually raised to Rs. 7,000. The fee for the Broker's card has increased. In 1921 a number of cards were sold at Rs. 40 000 each and the proceeds were employed to purchase an adjoining building for the extension of the business. The present value of the card is about Rs. 11,000.

In November 1917 a second Stock Exchange was opened in Bombay, with its headquarters

Exchange, Ltd. This separate Exchange no revise its decision, exception being made in the longer functions it was revived in 1922. It case of a partner dissociating from an existing has ceased to function again.

Committee of Enquiry.-In 1923 the Government of Bombay appointed a Committee to enquire into the constitution, practices, rules, regulations and methods of business of the Native Share and Stock Brokers' Association of Bombay and to investigate any such complaints of the public and to make any such enquiries with reference to any of the aforesaid matters or any other matter apportaining to the aforesaid Association as the Committee may deem proper and thereafter with a view to protect the investing public against the interested or irregular control of business to formulate such definite proposals for the future constitution, control, direction and regulation of the aforesaid Association as the Committee may deem proper.

The Committee issued a report early in 1924 signed by all the members save one who appended a minority report. The majority report made several important recommendations for reform notably one aimed at the prevention of corners and another for facilitating the handling of legitimate complaints against the brokers on the part of the public. The Association, how-ever, adopted the minority report which leaves the constitution and practice of the Exchange very little modified.

In the middle of the year 1925 there was heavy speculation in certain mill scrips. The market was tremendously oversold, the usual crisis ensured, leading to the temporary closing of the Exchange and the suspension of all dealings and a public agitation for thorough reform arose. The brokers were at first unwilling to arose. The brokers were at first unwilling to yield to this demand. But a threat of Government intervention and control altered their attitude. In the end, they submitted new draft rules under which wild speculation will be discouraged an i the recurrence of such crisis as that indicated above will be unlikely.

For many years the Calcutta Share Market met in the open air in business quarters and was under no control except that of market custom. In 1908 the Calcutta Stock Exchange Associ-ation was formed, a Representative Committee came into existence, and the existing customs were focussed into rules drawn up for the conduct of business. Public confidence grew rapidly and the rules regarding membership and business underwent drastic changes to suit advancing conditions. The Great War, having given an impetus to Indian industries, was responsible for an astoundingly large volume of business in the market which culminated in a boom.

In June, 1923, the Association was incorporated into a Limited Company under the Indian Companies' Acts 1913-1920 with an authorised

608. The Committee has restricted the further working members have deposited a security of sale of new shares until it deems it necessary to Rs. 3,000.

firm. Anyone to become a member is required to purchase a share from a member and the admission fee charged by the Association is Rs. 5,000. The conduct of members and of business is controlled by bye-laws, customs and usages being fully honoured. The market customs differ from those of most other Stock Exchanges, since there are no settlement days, delivery is due the second day after the contract is passed, and sales of securities are effected for most part under blank transfers. It has not got jobbers like the London Stock Exchange, but the brokers mostly combine the function of dealers. The principal business transacted is connected with the shares in Jute Mills, Coal Companies, Tea Companies registered in India, miscellaneous industrial concerns (such as paper, flour, etc.) Railway Companies and Debentures, the latter representing those of industrial concerns and Trustees investment Securities, namely, Municipal, Port Trust and Improvement Trust Debentures.

A general meeting of the sharcholders annually elects a Committee which elects several Sub-Committees and Hony. Office Bearers—the President, two Joint Hony. Treasurers and the Hony. Secretary. The Committee is empowered to do all work on behalf of the Association, which in its turn delegates powers to the Sub-Committees and the Hon. Office Bearers. The Committee also adjudicates in disputes between members thus enabling the members to avoid Law Courts in most cases.

Committee for 1935 — J. R. Coulthard, Esq., President, J. S. Haywood, Esq.; G. C. Mont-gomery, Esq. O. A. Cohen, Esq. Sarbotosh Sen, Esq.; Jitendra Mohan Dutt, Esq., M.Sc., Goralall Seal, Esq., Shambhu Nath Dutt, Esq., Gobind Lall Bangur, Esq., Mahahram Sonthalia, Esq., Basant Lall Chaturvedi, Esq.; Jagan-nath Jhunjhunwala, Esq., Bishanbhar Nath Chaturvedi, Esq., B.A., Lt B.; Mokandlall,

Joint Honorary Treasurers —Goralall Scal, Esq., Mahaliram Sonthalia, Esq.

Honorary Secretary -Satva Ranjan Mitra: Esq , B A., B L.

The Stock Exchange has its own building at 7, Lyons Range. This building-one of the finest specimen of its kind—was opened on 6th July, 1928, by Sir Stanley Jackson, the Governor of Bengal. The ground floor is utilised for the Association Hall where members meet between 12 noon and 5 p.m. This floor also contains the offices of the Association, a well equipped Library and several retiring places for the benefit of the members. The upper three floors are tenanted by members' offices.

The Madras Stock Exchange situated at No. 9 Companies' Acts 1913-1920 with an authorised capital of Rs. 3 lakhs divided into 300 fully pall up shares of 1,000 each. Accounts are made up annually up to 30th September. At the present moment, the number of shates the present moment, the number of shates subscribed is 223, each firm owning, and being entitled to own, only one share.

The total number of members, including a 100 members in the Directors. There is a Board of arbitracenties and assistants of member firms, is clearly the committee has restricted the further working members buy described as each time.

# Chambers of Commerce.

Modern commerce in India was built up by merchants from the west and was for a long time entirely in their hands. Chambers of Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years, taken a large and growing part in this commercial life. The extent of their participation varies greatly in different parts of India, according to the natural proclivities and genius of different races. Bombay, for instance, liss led the way in the industrial and commercial regeneration of the new India, while Bengal, very active in other fields of activity, lags behind in this one. Arising from these circumstances we find Chambers of Commerce in Bombay, Karachi, Calcutta, Madras and other important centres, with a membership both European and Indian; but alongside these have sprung up in recent years certain Associations, such as the Bombay Indian Merchants' Chamber and Bureau, of which the membership is exclusively Indian. These different classes of bodies are in no sense hostile to one arother and constantly work in association.

The London Chamber of Commerce in 1921 realizing the increasing attention demanded by the economic development of India, took steps to form an "East India Section" of their organization. The Indian Chambers work harmoniously with this body, but are in no sense affiliated to it, nor is there at present any inclination on their part to enter into such close relationship, because it is generally left that the Indian Chambers can themselves achieve their objects better and more effectively than a London body could do for them, and on various occasions the London Chamber, or the East India Section of it have shown themselves out of touch with what seemed locally to be immediate requirements in particular matters.

A new movement was started in 1913 by the Hon. Sir Fazulbioy Currimbhoy Ibrahim, a leading millowner and public citizen of Bombay, which aims at effecting great improvement in strengthening Indian commercial organization. Sir Fazulbhoy's original plan was for the formation of an Indian Commercial Congress. The proposal met with approval in all parts of India. The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas holiday season, in the Town Hall, Bombay. The list of members of the Reception Committee showed that all the important commercial associations of Bombay were prepared to cooperate actively.

The Congress was attended by several hundred delegates from all parts of India. Mr. (now Pombay. The Commercial Congress held in Hon. Sir) D. E. Wacha, President of the Bombay Indian Merchants' Chamber, presided 2nd January 1927, decided upon the formation as Chairman of the Reception Committee, at of a "Federation of Indian Chambers of

Modern commerce in India was built up by strenants from the west and was for a long mental in their hands. Chambers of dimerce and numerous kindred Associations were formed by them for its protection id assistance. But Indians have in recent hars, taken a large and growing part in this memerical life. The extent of their particition varies greatly in different parts of India, coording to the natural proclivities and genius

The following are the principal paragraphs of a Memorandum of Association and Statement of Objects of the new Associated Chamber as approved by the Congress.—

I. The name of the Chamber will be "THE ASSOCIATED INDIAN CHAMBER OF COMMERCE."

II. The Registered Office of the Chamber will be in Bombay.

III. The objects for which the Chamber is established are:—

- (1) To discuss and consider questions concerning and affecting trade, commerce, manufactures and the chipping interests, at meeting of delegates from Indian Chambers of Commerce and Commercial Associations or Bodies and to collect and disseminate information from time to time on matters affecting the common interests of such Chambers or Associations or Bodies and the commercial, manufacturing and shipping interests of the country.
- (2) To attain those advantages by united action which each Chamber or Association or body may not be able to accomplish in its separate capacity.
- (3) To organize Chambers of Commerce Commercial Associations or Bodies in different trade centres of the Country.
- (4) To convene when necessary the Indian Commercial Congress at such places and at such times as may be determined by a Resolution of the Chamber

The Articles of Association provided "There shall be an annual meeting of the Associated Indian Chamber held at Bombay on a date to be fixed by the Executive Council in the month of February," or at some other time, and "semi-annual or special meetings... may be convened by the Executive Council or on the requisition of one-third of the total number of members addressed to the Secretary ..."

The organization languished for lack of support for some years until a number of merchants specially interested in Curiency and Exchange questions revived it in 1926 at Delhi and 1927 at Calcutta, the initiative in the new activities halling, like the first movement, from Pombay. The Commercial Congress held in Calcutta on 31st December 1926 and 1st and 2nd January 1927, decided upon the formation of a "Federation of Indian Chambers of

Commerce" and agreed to the registered office of this body being "at the place where the President for the year has his headquarters or where he directs it to be located." Among the objects for which the Federation is established are the following :-

- (a) To promote Indian businesses in matters of inland and foreign trade, transport, industry and manufactures, finance and all other economic subjects.
- (b) To encourage friendly feeling and unanimity among business community and associations on all subjects connected with the common good of Indian business.
- (c) To enter into any arrangement with any Government or authority supreme, nunnerpal, local or otherwise that may seem conductve to the Federation's objects or any of them, and to obtain from any such Government or authority all rights, concessions, and privileges which the Federation may think it desirable to obtain and to carry out, exercise and comply with any such arrangements, rights, privileges and concessions.
- (d) To sell or dispose of the undertaking of the Federation or any part thereof for such consideration as the Federation may think fit and in particular for shares, debentures or securities of any other company having objects altogether or in part similar to those of this Federation.
- (c) To take or otherwise acquire and hold shares in any other company having objects altogether or in part similar to those of this Federation.
- (f) To undertake and execute any trusts the undertaking of which may seem to the Federation desirable either gratuitously or otherwise.
- (g) To draw, make, accept, discount, Office address Kamla Tower, Cawnpore. promissory notes, bills of lading Telegraphic address. Unicomind, Cawnpore.

warrants, debentures and other negotiable or transferable instruments or securities.

The Rules provide for two classes of members, viz., numbers consisting of Chambers of Commerce (Subscription Rs. 300) and others consisting of Commercial Associations (Subscription Rs. 150).

following are the Committee of the The Federation for 1935 :-

President .- Lala Padampat Singhania.

Vice-President .- Mr. D P. Khaitan.

### Special Work.

One of the most important functions performed by the Chamber is that of arbitration are issued by these officers with the authority in commercial disputes. Rules for this have of the Chamber to shippers and ship agents as

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of fourteen Indian clarks who, by the authority of Government, work in the Customs House and have every tacility placed at Customs authorities. at their disposal by the ities. They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. divisions, No other Chamber in India does similar work to the same extent.

The Bombay Chamber publishes a Daily Arrival Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Daily Trade Return, which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure, while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo car-ried by each steamer to and from Bombay.

Four statements are issued once a month. One shows the quantity of exports of cotton seeds and wheat from the principal ports of the whole of India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosene oil, coal, aniline dyes, sugar, matches, wines and other sundry goods. The third shows, classified, the number of packages of piece-goods and yarns imported by individual merchants. The fourth gives number of bales of cotton exported by each firm to each country during the month with a running total of the number of bales exported during the year.

Another "Monthly Return" issued by the Chamber shows clearances of a large number of important designations of merchandise. A return of "Current Quotations" is issued once a week, on the day of the departure of the English mail, and shows the rates of exchange for Bank and Mercantile Bills on England and Paris, and a large quantity of general banking and trade information.

The annual reports of the Chamber are substantial tones in which the whole of the affairs of the Chamber and the trade of the port during the past year are reviewed.

The Chamber has also a Measurement De-partment with a staff of 10, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates been in existence for many years and have to the measurement of cotton and other goods worked most satisfactorily. The decisions in bales or packages. From the measurements are in all cases given by competent arbitrators given in this certificates the freight payable by the appointed by the General Committee of the Shippers of goods is calculated. The measurers Chamber and the system avoids the great are in attendance on the quays whenever there expense of resort to the Law Courts. season are on duty early and late. The certificates granted show the following details:—

- (a) The date, hour and place of measurement.
- (b) the name of the shipper;
- (c) the name of the vessel:
- (d) the port of destination;
- (e) the number and description of packages:
- (f) the marks:
- (g) the measurement, and in the case of goods shipped by boats;
- (h) the registered number of the boat;
- (i) the name of the tindal.

Certificates of weight and of origin are also issued by the Chamber.

Members who are absent from Madras but pay their subscriptions may be represented in the Chamber by their powers-of-attorney, as honorary members, subject to ballot. Honorary members thus elected are entitled to the full privilege of ordinary members. Election for membership is by ballot at a general meeting, a majority of two-thirds of the recorded votes being necessary to secure election. Every member pays an entrance fee of Rs. 100, provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs. 100 once in ten years each. The subscriptions shall not exceed Rs. 300 per annum, payable quarterly in advance, subject to reduction from time to time in accordance with the state of the Chambers' finances. Absentees in Eu-rope pay no subscription and members temporarily absent from Madras pay one rupee per month. Honorary members are admissible to the Chamber on the usual conditions. Members becoming insolvent cease to be members but are eligible for re-election without repayment of the entrance donation.

The Chamber undertakes arbitrations and surveys, the granting of certificates of origin and the registration of trade marks. One of the rules for the last named is "that no trade mark or ticket shall be registered on behalf of an Indian firm trading under a European name,'

The following publications are issued by the Chamber :- Madras Price Current and Market Report, Tonnage Schedule and Madras Landing Charges and Harbour Dues Schedule.

There are 58 members and 8 Honorary Members of the Chamber in the current year and the Officers and Committee for the year are as follows: ---

Charman.—Sir William Wright, O.B E., Vice-Charman —Mr W. H. Ruddle Commuttee —Mr. G A Bambridge, Mr. H N. Colam, Mr G L. Orchard, Mr. D. M. Reid.

The Committee usually meets once a month on the penultimate Thursday and the general body meets on the last Thursday.

A Fortnightly Circular of current rates of the Committee.

#### DEPARTMENT OF COMMERCIAL INTELLIGENCE AND STATISTICS.

into the Department of Commercial Intelligence with effect from the 1st December 1922. The joint department has its office at No. 1, Council House Street, Calcutta. It embraces two distinct classes of work: (a) the collection and dissemination of information connected with overseas trade which may be of use to Indian firms and (b) the compilation and publication of All-India statistics.

For some time past the Government of India have felt the necessity for the creation of a Central Statistical Research Bureau for the continuous analysis and interpretation of economic and statistical facts and phenomena and they have recently established the nucleus of a Statistical Research Bureau under the Director-General of Commercial Intelligence and Statistics at their headquarters. The Director-General is now stationed at the headquarters of the Government of India with a Deputy Director of Commercial Intelligence and a Deputy Director of Statistics at Calcutta and a new Deputy Director of Statistical Research at the headquarters.

Among the important publications for which the Director-General is responsible are the following annual volumes Review of the Trade of India, Statement of the Foreign Sea-borne Trade and Navigation of British India, Trade and Navigation of British India, Agricutal Statistical Abstract for British India, Agricutal Statistica, Estimates of Area and Yield of Principal Crops and Indian Customs Tarlif. The department also publishes a weekly journal—The Indian Trade Journal—the principal features of which are (a) information as to tarlif change in foreign countries which affect Indian interests (b) various parts of the world. And the yearly notices of tenders called for and contracts nlaced by Government departments and public steadily being used more and more both by firms

The Department of Statistics was reabsorbed notifications affecting trade, (e) analysis of Into the Department of Commercial Intelligence dian trade statistics, (f) market reports, prices ith effect from the 1st December 1922. The imports, (g) trade enquiries for securing trade introductions, (h) summaries of the leading features of consular and other trade reports, and (i) abstracts of the proceedings of the various Chambers of Commerce in India.

> The Department also administers the Com-MERCIAL LIBRARY AND READING ROOM located at No. 1, Council House Street, Calcutta. This was at first a small departmental library used for the purpose of answering enquiries, but in 1919 the Government of India agreed to the formation of a combined technological library of reference in Calcutta in place of the separate libraries attached to the Departments of Commercial Intelligence, Statistics, and Patents and Designs, and the resultant Commercial Library and Reading Room was placed under the administrative control of the Director-General. It has now been expanded into a first-class technical library containing over 15,337 volumes on different subjects of commercial, economic and industrial interest as well as Indian and foreign statistical publications, and over 388 technical and commercial journals and market reports. Ordinarily books are consulted in the Library, but they are also available on loan upon deposit of value throughout India.

placed by Government departments and public steadily being used more and more both by firms bodies, (e) crop reports and forecasts, (d) in India and by overseas firms interested in Government orders, communiques and other Indian exports.

# THE BRITISH TRADE COMMISSIONER SERVICE IN INDIA.

part of the world-wide Commercial Intelligence Organisation of the Imperial Government. The Department of Overseas Trade, London, which is the headquarters of this organisation, is a joint department of the Board of Trade and the Foreign Office and was created in 1917 with the specific object of stimulating the overseas trade of the United Kingdom by securing commercial information from all parts of the world; by disseminating it to British manufacturers and exporters; by undertaking such special constructive activities as may be found possible; and by assisting traders in the removal of their difficulties. The Department has nothing to do with the regulation of trade. It passes no measures and makes no restrictive or regulative orders. Briefly, the policy on which it is based is the policy of assistance without interference.

The Department of Overseas Trade maintains a network of trained and experienced Commercial Intelligence Officers throughout the world; who forward a constant supply of commercial information to London and provide local assistance in the promotion of British economic interests. Those overseas officers who are stationed in the British Empire are members of the Trade Commissioner Service while Foreign countries are served by the Commercial Diplomatic Service forming part of the British Diplomatic Missions and by the Consular Service.

Sir (then Mr.) Thomas M. Ainscough, C.B.E., was appointed His Majesty's Senior Trade Commissioner in India in January 1918 and opened an office in Calcutta in March of that year. For five years, owing to the pressing need for economy in the Public Service, he was singlehanded in covering this vast territory. In 1923, however, H.M.'s Government sanctioned the opening of an office in Bombay and the creation of an additional Trade Commissioner's post in Calcutta. Mr. W. D. M. Clarke holds the appointment of H.M. S Trade Commissioner at Bombay and in 1935 Mr. A. Schofield was appointed as H.M. S Frade Commissioner at Calcutta. The territory is now divided between the Calcutta and Bombay posts and this development allows the Senior Officer to travel almost continuously to any part of India which may call for his attention and to devote his time to some of the broader politicoeconomic problems which are becoming so important in view of the changing political conditions in India.

Function of Commissioner.—The primary duty of the British Trade Commissioner comprises the collection of information in regard to opportunities that may arise within his territory for securing and developing trade by British manufacturers and merchants, both in the United Kingdom and other parts of the British Empire. He is, therefore, enjoined carefully to watch and report from time to time to the Board of Trade and the Governments of the Dominions concerned on all matters affecting the trade, industry and commerce of his area. His general

The British Trade Commissioners in India are into personal relations with the Chambers of Commerce, Trade Associations, and similar bodies, and with the principal representative importers and local manufacturers; to visit the principal commercial centres; to report upon foreign competition, on financial and trade conditions, and new legislation affecting trade; to make an annual general report on the conditions. tions and prospects of trade in his area; and to furnish special reports and monographs on particular questions which are likely to be of interest to British manufacturers and exporters. He is also expected to supply a regular flow of commercial information of all kinds to his department; to maintain an active correspondence with firms in the United Kingdom or the Dominions who wish to extend their trade with his area: and to give all possible assistance to the representatives of British firms who may visit his territory.

> Every effort is made by His Majesty's Trade Commissioners to keep in touch with British representatives and agents in India. The offices are equipped with a complete range of directories and reference books of all kinds and information is available with regard to such matters as tariff conditions, port dues and charges throughout the world, etc. A library consisting of over 1,000 catalogues of the leading British manufacturers is maintained in Calcutta and Bombay, and firms desiring information with regard to specific manufacturers of particular machinery or processes are invited either to call personally or to communicate their require-ments in writing. It is hoped that local im-porters and buyers will co-operate by making a more extended use of the information available in the offices and by bringing to the attention of the British Trade Commissioners any cases where the interests of exporters from the United Kingdom or the Dominions may be adversely affected by foreign competition or otherwise.

For many years British traders have deplored the fact that there have not been available officials with commercial experience who could help them in voicing their difficulties and in meeting foreign competition. As a rule these complaints eulogized the Consuls of other countries and invited the attention of Government tries and invited the attention of dovernment to their many virtues. In response to this agitation the greatest care has been taken by the British Government to select, as their trade officers Overseas, men of sound commercial training and experience who have acquired some reputation in their respective spheres, and a comprehensive and businesslike organization has been built up at the Department of Overseas Trade, London, to deal with the information sent home. It now rests with the British mercantile community, both at home and also Overseas, to co-operate freely and frankly with the Trade Commissioners and to recognize the work they are doing in the Imperial interest by assisting them with such information and particulars functions are to maintain cordial relations with the governing authorities of his area; to enter those of trade, etc., as they are able to afford.

H. M.'s TRADE COMMISSIONERS IN INDIA.

#### THE INDIAN CENTRAL COTTON COMMITTEE.

The Indian Cotton Committee of 1917-18, REPRESENTATIVES OF AGRICULTURAL a full summary of whose report appears on pages 291-294 of the Indian Year Book of 1922, reviewed the position of cotton growing Madras —Mr S V. Ramamurty, 1 C.S., Duecin India very thoroughly and made a series of recommendations for the improvement of cotton growing and marketing which have proved to be of the greatest value. One of their recommenda-tions was that a permanent Indian Central Cotton Committee should be established to promote the welfare of the cotton-growing industry generally to advise the Government of India and Local Governments in regard to matters of cotton policy, especially with reference to legislation for the prevention of malpractices and similar matters.

The Indian Central Cotton Committee was appointed by resolution of the Government of India in April 1921, and worked as an advisory body until 1923. Another recommendation of the original Committee was that a cotton cess should be levied to provide funds for the work of the Central Cotton Committee and for agricultural and technological research on cotton. The Cotton Cess Act was passed in 1923 and at the same time the Central Cotton Committee was incorporated and its membership enlarged in order to make it fully representative of all sections of the industry. Its constitution and present membership is as follows:—

President — Dewan Bahadui Sir T. Vijayaraghavacharya, K.B.E., Vice-Chairman, Imperial Council of Agricultural Research, ex-officio.

(a) The Expert Adviser to the Imperial Council of Agricultural Research in Agricultural matters, ex-officio.

Madras -Mr S V. Ramamurty, 1 C.S., Director of Agriculture

Bombay -The Director of Agriculture.

United Provinces -MI. R G. Allan, I.A.S., Director of Agriculture

Punjab .- - The Director of Agriculture.

Central Provinces -Mr J H, Ritchie, IA.S., Ducctor of Agriculture.

Burma --- Mr. F D. Odell, I.A S. Deputy Director of Agriculture, West Central Circle,

Director-General of Commercial Intelligence and Statistics, ex-officio,

REPRESENTATIVES OF CHAMBERS OF COMMERCE & ASSOCIATIONS.

The East India Cotton Association, Sir Purshotamdas Thakurdas, Kt , C I.E., M.B.E. (Vice-President)

The Bombay Millowners' Association, Mr. S. D. Saklatvala.

The Bombay Chamber of Commerce, Mr. H. B Moore,

The Indian Merchants' Chamber, Mr. Chunilal B. Mehta.

The Karachi Chamber of Commerce, Mr. F. G. Travers.

The Ahmedabad Millowners' Association, Seth Sakarlal Balabhai.

The Tuticorm Chamber of Commerce, Mr. J. Vonesch.

The Upper India Chamber of Commerce, Mr. E. J. W. Plummer.

The Empire Cotton Growing Corporation, M1. W. Roberts, C.I E.

COMMERCIAL REPRESENTATIVES NO-MINATED BY LOCAL GOVERNMENTS.

Central Provinces -Mi Y. G Deshpande, Rao Bahadur G. R. Kothaie, M.L C.

Madras,---Mr J. Nuttall.

Punjab.—Khan Bahadur Sudar Habibulla, State.

Bengal .-- Mr. Akhil Bandhu Guha.

# CO-OPERATIVE BANKING REPRESENTATIVE.

Rao Bahadur M. G. Deshpande, C.B.E.

# REPRESENTATIVES OF COTTON-GROW-ING INDUSTRY

Madras — M1. K. S. Ramaswami Gownder. M. R. Ry K. Sarabha Reddi Gaiu.

Bombay.--Sardar Rao Bahadur Bhimbhai Ranchodh Naik, M.L.O., Rao Bahadui Chenbasappa Shidramappa Shirahatti.

United Provinces — Khan Bahadur Shah Nazart Hussain, M.L.O. Rao Bahadur Lala Anand Salup, M.L.O.

Punjab.—Sardar Sampulan Singh, M.L.C.

Central Provinces and Berar.—Mr. N. M. Deshmukh, Mr J. B. Deshmukh.

REPRESENTATIVES OF INDIAN STATES.

Hyderabad State.—Mr. Nızam-ud-dın Hyder, Director of Agrıculture.

Baroda State.—Mr. C. V. Sane, Director of Agriculture,

Gwalior State -Mr. H. H. Pandya, Agricultural Adviser.

Rajputana and Central India States.—Mr. F. K. Jackson, Director, Institute of Plant Industry, Indore.

ADDITIONAL MEMBERS NOMINATED BY THE GOVERNOR-GENERAL-IN-COUNCIL.

Mr. D. N. Mahta, Economic Botanist for Cotton, Central Provinces.

Mr. S. S Salmath, Deputy Director of Agriculture, Southern Division, Dharwar.

M. R. Ry. V. Ramanatha Iyer, Avl., Cotton Specialist, Combatore.

Musahib-i-khas Bahadur S V. Kanungo, Finance Minister, Representative of the Indore State.

Mr. W. J. Jenkins, I.A.S., Chief Agricultural Officer in Sind.

Seth Isserdas Varindmal, Representative of the Karachi Indian Merchants' Association.

MI P. B. Richards, IAS,, Entomologist to Government, United Provinces, Cawnpore.

Khan Bahadur Nawab Fazl-i-Ah Khan, Chairman, District Board and President, Central Co-operative Bank, Ltd., Gujrat (Punjab).

Khan Saheb Farrukhbeg Sadikalibeg Mirza. Nawabshah, Sind.

Lala Shri Ram, Representative of the Cotton Millowners' of Delhi.

A. K Yegna Narayan Iyer, Director of Agriculture, Mysore State, Bangalore.

Mr. Chellaram Shewaram, Representative of the Karachi Cotton Association Ltd.

Secretary .-- Mr P. H. Rama Reddi, I.A.S.

Deputy Secretary .- Vacant.

Publicity Officer .- Mr. R. D. Mihra.

Director, Technological Laboratory.—Dr. Nazir Ahmad.

Estate, Bombay.

From the commencement the Central Cotton Committee took steps to deal with the various malpractices reported by the original Committee which by spoiling the reputation of the Indian cottons and rendering them less valuable for spinning purposes, were reducing the returns of the grower and causing great economic loss to the country at large.

for purposes of adulteration, and the reputation of several valuable cottons had been ruined by this abuse. The Act has now been applied to the most important staple cotton areas of the Bombay and Madras Presidencies and the Central Provinces and of the Baroda, Rajpipla, Chhota Udepur, Hyderabad, Indore, and Sangii States and with excellent results.

The Cotton Ginning and Pressing Factories Act (XII of 1925) subsequently passed provides for a certain measure of control of ginning and pressing factories and especially for the marking of all hales of cotton pressed with a press mark and serial number which enables them to be traced to their origin. This Act, with the minimum of official interference, places the cotton trade in a position itself to deal with abuses, and should lead to a very to deal with abuses, and should lead to a very approaches the subject primarily from the stand-narked improvement in the quality of Indian point of the grower. cottons.

The Central Cotton Committee has devoted considerable attention to constructive of cottons and to bringing to the notice of the fundamental importance are being studied. varieties which have now reached a commercial scale and has carried out some important en-quiries into the financing of the cotton crop un-country and primary cotton marketing, special investigations on problems of general and the effect of "pools" of cotton ginning and applicability which would otherwise have been pressing factories on the price paid to the left untouched through lack of staff and funds, growers for their produce. As an instance of the Such schemes are in operation in all major progress in cotton growing which has been made of the cotton-growing provinces and now number since 1917 it may be stated that since that date | twenty-eight. since 1917 it may be stated that since that date approximately half a million bales of cotton of medium staple have been added to the Indian crop by the work of the Agricultural Departments. In general it may be said that the Committee affords a common meeting ground for representatives of all sections of the Cotton in the wider distribution of seed of improved trade and of the cottongrowing industry, thus a pareling a number of problems to be tackled in operation at present enabling a number of problems to be tackled in operation at present. from every point of view and definite progress made towards their solution.

Research Studentships.—The Committee has also instituted a scheme of research student-Research Studentships.—The Committee formally opened the Committee's Spinning La-asso instituted a scheme of research student boratory laid great stress on the importance ships to enable distinguished graduates of Indian and value of the Committee's work.

Office, -Vulcan House, Nicol Road, Ballard | Universities to undertake research on cotton problems under the direction of experienced research workers in India. Scholarships for training abroad are also sometimes granted.

Statistics:- By the efforts of the Committee great improvement has been effected in cotton statistics. The compilation of statistics relating to (1) Indian raw cotton consumed in spinning mills in India, (2) exports by sea and receipts at mills of Indian cotton classified by varieties, (3) stocks of cotton held on the last day of the 1923 enables any Local Government with the consent of its Legislative Council to notify definite areas of cotton for protection and to prevent the importation of cotton from outside the area except under license. Prior to the passing of the Actinerior cottons were imported in large quantities into the stable cotton tracts. for cotton are some of the results already achieved by the Committer in this direction,

> Research .- By means of the Cotton Cess the Committee is provided with funds for the promotion of research. It maintains in Bombay a fully equipped Technological Laboratory which includes a complete experimental, spinning plant and a scientific laboratory for research on the cotton fibre. This laboratory provides Agricultural Departments with complete and authoritative reports on the spinning value of new cottons, thus providing a much needed facility. In addition it is now possible to undertake research work on a number of questions connected with the spinning qualities of cotton which have not been touched in the past. The Laboratory is unique in that it is probably the only institution of its kind which

The Committee contributes the greater part of also the funds for the Indore Institute of Plant Industry which is a Central Agricultural Research

In addition by means of grants-in-aid to Agricultural Departments it has provided for cotton-growing provinces and now number

His Excellency the Viceroy (Lord Reading) when he visited Bombay in December 1924 and

# THE EAST INDIA COTTON ASSOCIATION, LIMITED.

Bombay.—The Association is the outcome of the findings of the Indian Cotton Committee which was appointed by the Governor-General in Council under a resolution dated September 27th, 1917. Until the end of 1917 the Cotton 27th, 1917. Until the end of 1917 the Cotton Trade of Bombay was in the hands of seven distinct bodies, viz., The Bombay Cotton Trade Association, I.td., The Bombay Cotton Exchange, Ltd., The Bombay Millowners' Association, The Hombay Cotton Brokers' Association, Ltd., The Marwari Chamber of Commerce, The Bombay Cotton Merchants' and Muccadums' Association Ltd., and The Japanese Cotton Shippers' Association. None of these Cotton Shippers' Association. None of these bodies were representative of the trade as a whole and their interests often came into conflict with each other. The necessity of a system of periodical settlements, such as existed in Liverpool, was badly felt, especially when speculation was rife in futures which was so excessive in 1918 that the Trade had to invoke the aid of Government to prevent a financial crisis.

The Cotton Contracts Committee was created under the Defence of India Act in June 1918 as a under the Defence of India Act in June 1918 as a temporary measure under the Chairmanship of Mr. G. Wiles, I.C.S. This body was replaced by the Cotton Contracts Board in 1919, which continued to function until May 1922, when the Act, under which the Board worked, was repealed, and its functions were carried on by the Exert Value Cetter Accelette under which East India Cotton Association under Bombay Act No. XIV of 1922.

The Association continued to function under the above Act until 31st October 1932. effect from 1st November 1932 the Association has been regulating transactions in cotton under Bombay Act No. IV of 1932 under which it has been declared to be a recognised Cotton Associa-

The present constitution of the Board is as follows

follows — Sir Phrishotanidas Thakurdas, Kt., C.I.E., M.B.E., (President), Sellers' Panel, Handas Madhavdas Esq. (Vice President), Sellers' Panel, Ramnivas Ramnaran, Esq. Buyers' Panel, J. O. G. Barnes, Esq., Buyers' Panel; J. Vonesh, Esq., Buyers' Panel, Ahmed Habib-Esq., Buyers' Panel, Chimanlal B. Parkh, Esq., Sellers' Panel; Hansraj Jeewandas, Esq., Sellers' Panel; Fathechand Jhunihunwal, Esq. Esq., Sellers' Panel; ramsray occumanae, 1891, Sellers' Panel; Fathechand Jhunjhunwala Esq., Selleri' Panel, Begray Gupta, Esq., Brokers' Panel, Chumlal B Mehta, Esq., Brokers' Panel, Jaguwandas Dossabhar, Esq., Brokers Panel, Jagjiwandas Dosabhai, Esq., Brokers' Panel, Ramdeo Anandilal Podar, Esq., Brokers' Panel, Hargovindas Jeewandas, Esq. Brokers' Panel, Chiranjial R. Loyalka, Esq., Brokers' Panel, N. M. Deshmukh, Esq., M.A. (Cantab.) Brokers' Panel; Bar-at-Law, Brokers' Panel; Mian Nurullah, Esq., M.L.C., Brokers' Panel, Sardar Rao Bahadur Bhmbhai R. Naik, M.L.C. Growers' Representatives nominated by the Indian Central Cotton Committee! Rao Bahadur C. S. Shirahatti; Behrumshah K. Bharucha, Esa Growers' Representatives nominated by Esq., Growers' Representatives nominated by the Government of Bombay.

Officers D. Mehta, Esq., B.A., Secretary, C. M. Parikh, Esq., B. Com., Assistant Secretary, A. R. Manually in December and statistics are issued twice weekly.

Some of the objects for which the Association is established are:-To provide and maintain suitable buildings or rooms for a Cotton Exchange in the City of Bombay and elsewhere in India and to regulate admission to and prohibition of the use thereof and the nature and times of such user whether in the case of the general body or particular classes or any individual or firm or company using the Exchange; to provide forms of contracts compulsory or permissive and regulate the making. carrying out and enforcement or cancella-tion of contracts; to adjust by arbitration or otherwise controversies between persons engaged in the Cotton Trade; to establish just and equitable principles in the said Trade; establish to maintain uniformity of control of the said trade; to fix or adopt standards of classi-fication of cotton, to acquire, preserve and disseminate useful information connected with the Cotton interest throughout all markets; to decrease or insure the local risk attendant upon business; and generally to control, promote and regulate the Cotton Trade in the Presidency of Bombay and elsewhere in India, improve its stability and augment the facilities with which it may be conducted. To establish and maintain a Clearing House for the purpose of dealing with cotton transactions, and to regulate admission to and prohibition of the user thereof and the nature and times of such use whether in the case of the general body or particular classes or any individual or firm or company using the Clearing House. To regulate the handling and exportation of Cotton into India in so far as it may be imported. To bring, prosecute, or defend, or aid in bringing, prosecuting, or defending any suits, actions, proceedings, applications, or arbitrations on behalf of Members or Associate Members or Special Associate Members or otherwise as the Directors of the Association may think proper use whether in the case of the general body or Directors of the Association may think proper or conductive to the objects of the Association, and to prescribe the principle of framing of contracts with a view to eliminate the temptation and possibility of speculative manipulation.

The Association has a fine Exchange Building at Sewri Cotton Depot, containing 121 Buyers' Rooms and 84 Sellers' Rooms, and a large Trading Hall on the lines of Liverpool and New York Exchanges.

The inaugural ceremony of the opening of the Exchange Building was performed by His Excellency Sir Leslae Wilson, Governor of Bombay on the 1st December 1925 in the presence of a large gather.ng which included most of the prominent business men of the City and many leading citizens.

There is a membership of 391 members.

The Bombay Cotton Annual containing

# The Textile Industry.

from the earliest times. Its cotton, known as white wool, was well known to the ancients and its cloth was familiar to the West in the days of the overland route. The name Calico comes from the fine woven goods of Calicut, and the products of the Dacca handlooms are still remarkable as the finest muslins human skill can produce.

#### Indian Cotton.

The exports of Indian cotton began to assume importance with the opening of the sea route. They received an immense stimulus during the They received an immense summing during the American Civil War, when the close blockade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 528,000 bales but during the last year of the war they averaged 973,000 bales. Most of this cotton was sold at an enormously inflated price, and but they indicate the distribution of the crop:

India has been the home of the cotton trade induced a flow of wealth into Bombay, the induced a now or weath into hombay, the great centre of the trade, for which there was no outlet. The consequence was an unprecedented outburst of speculation known as the "Share Mania," and when the surrender of Lee re-opened the Southern Ports widespread rule followed. It is estimated that the surplus would be becaute the the country by the Americalth here in the country by the Americalth here is the country by the Americalth here is the country by the Americalth here is the country by the Americalth in the country by the Americalth in the country by the Americalth in the country by the Americalth in the country by the Americalth in the country by the Americalth in the country by the Americalth in the country by the Americal in the country by the Americal in the country by the Americal in the country by the Americal in the country by the Americal in the country by the Americal in the country by the Americal in the country by the American in the wealth brought into the country by the American ('ivil War aggregated £92 millions. Since then the cultivation of Indian cotton, although interrupted by famine, has steadily increased. For the last season for which returns are available, 1933-34 the total area in all territories reported on was computed at 23,739,000 acres and the total estimated outturn was 4,970,000 bales of 400 lbs. as compared with 22,588,000 acres and 4,516,000 bales in 1932-33.

> Bombay, the Central Provinces and Hyderabad are the chief producing centres. The following table gives the rough distribution of the outturn. The figures are the estimated figures for the past season, and are not exact.

Bombay is the great centre of the cotton Bombay is the great centre of the cotton trade. The principal varieties are Dholleras, Broach, Oomras (from the Berars), Dharwar and Coomptas. Broach is the best cotton grown in Western India. Hinganghat cotton, from the Central Provinces, has a good reputation. Bengals is the name given to the cotton of the Gangetic valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Coconadas, Colmbatores and Tinnevellys. The best of these is Tinnevelly. Cambodia cotton has been grown with success in Southern India. been grown with success in Southern India, but it shows a tendency to revert. The high prices of cotton realised of recent years have given a great impetus to cultivation. Government have also been active in improving the class of cotton produced, by seed selection, hybridization and the importation of exotic hybridization and the importation of exotic were really laid by the opening of the first mill cottons. Although these measures have met in Bombay in 1856. Thereafter, with occawith a considerable measure of success, they sional set backs from famine, plague and other have not proceeded far enough to leaven the causes, its progress was rapid.

whole outturn, which still consists for the most part of a short-staple early maturing variety suitable to soils where the rainy season is brief.

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England, and it was killed by a series of enactments, commencing in 1701, prohibiting the use or sale of Indian calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piece-goods. The first attempt to establish a cotton mill in India was in 1838, but the foundations of the industry

The following statement shows the quantity (in pounds) of yarn of all counts spun in all India for the twelve mouths April to March, in each of the past 4 years:—

In the early days of the textile industry the energies of the millowners were largely concentrated on the production of yarn, both for the China market, and for the handlooms of produce more dyed and bleached goods. This reaction in the China market, the growth of an indigenous industry in China and the uncertainties industry in China and the uncertainties introduced by the fluctuations in the China exchanges consequent on variations in the China price of silver compelled the millowners to cultivate the Home market. The general tendency of recent years has been to spin

#### ANALYSIS OF WOVEN GOODS.

The following brief extract is taken from the statement of the quantity (in pounds and their equivalent in yards) and description of woven goods produced in all India, including Native States:-

<sup>\*</sup> Year ending 31st August.

# The Jute Industry.

Considering its present dimensions, the jute Company. On the working of their first half industry of Bengal is of very recent origin. The first jute mill in Bengal was started at tishra in 1855, and the first power-loom was taken over introduced in 1859. The original outturn was 8 tons per day. In 1909 it had grown to 68 per cent, premium. The dividend for the was 8 tons per day. In 1909 it had grown to to be result present. In addition for the 2,500 tons per day, it is now 4,000 tons first year, ending August 1873, was 25 per per day, and it shows every indication of growing and expanding year by year. However, the continuous thing about the jute input of Bengal is that, although it is practice.

Then came a change. The investment of the protection of the prot cally a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an uturn than coal or tea, both of which had just en-Englishman. The founder of the industry was George Acland, an Englishman, who began prospectus of a jute mill to have all the shares infe as a midshipman in the navy, and was snapped up in the course of an afternoon.

In 1872-73 three new companies were floated vice. He quitted this service while still a young locally—the Fort Gloster, Budge and man, and engaged in commercial pursuits Sibpore, and two Home companies, the Champon he turned his attention to Boxes! on he turned his attention to Bengal, and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Scrampore, where experiments being tried with country grasses and Mrc being tried with country grasses and of the Belliaghatta-Barnagore branch mill), plants to improve the quality or cheapen the Rustomice (now the Central), Ganges (regismanufacture of paper. This seems to have the grant of the suggested to Acland the manufacture of thea, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. 1,250 up to 3,500. This was too much of a During this trip he visited Dundee, and while strain for the new industry, and for the next there Mr. John Kerr, of Douglas Foundry, ten years all the mills had a severe struggle. Suggested to him the importing of machinery The older ones all survived the ordeal, but into Bengal "where the jute comes thom and spin it there." This suggestion bofe fruit, Assatic, the Bengal Pressing and Manufacturing Co. (now were belling that and the survived the content of the new companies, coming on all the total looms from the mean that the proceeded to the new concerns—the Oriental, the spin it there." This suggestion bofe fruit, Assatic, the Bengal Pressing and Manufacturing Co. (now the central), the survived the order of the new concerns—the Oriental, the spin it there." This suggestion bofe fruit, Assatic, the Bengal Pressing and Manufacturing Co. works, then at Scrampore, where experiments spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first by Messrs. Jardine, Skinner & Co., which came jute mill in Bengal. This, as has been stated, into being in 1877, as the result of Dr. Barry's was at Rishra, the site of the present Welling visit to Calcutta in 1878, when he transferred ton mills, near Seramoore, and here in 1978. the first machine spun jute yarns were made. As not infrequently happens the pioneer got very httle out of his venture. After several ups and downs the Acland interest in the Rishra mill reased in 1867, and the company which Acland had formed in 1854 was wound up in 1868.

had formed in 1854 was wound up in 1888.

Power-looms.—The pioneer's example was followed by Mr. George Henderson of that silk firm, and in 1859 the Borneo Jute Co. was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhampered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co. made rapid pogress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present Barnagore Jute Factory Co., Ld." Four other mills followed in succession—Gouripore, Seraigunge, and India Jute sion-Gouripore, Serajgunge, and India Jute Mills.

"From 1868 to 1873," writes Mr. David Wallace in "The Romance of Jute," "the five mills excepting the Rishra mile simply "the

Canning bubble, and the condition of the jute industry in 1872-73 seeming to offer a better re-

dany and Samnugger, all of which commenced operations in 1874. In 1874-5 eight other mills were launched—the Howrah, Oriental (now Union), Asiatic (now Sociah), Clive, Bengal Pressing and Manufacturing Co. (now management. Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill the agency of the Gouripole Co. from Messrs. Jardine, Skinner & Co. to his own firm. This mill, together with additions made by some of the other mills, brought the total looms up to 5,150 in 1882. By the end of 1885 the total was further augmented by the Hooghly, Thtaghur, Victoria and Kanknarrah mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill, with 2,460 spindles, since merged into the Wellington branch of the Champdany o. Between 1896 and 1900 the following new mils were started:—The Gordon Twist Mill with 1,800 spindles (now acquired by Anglo-India), Khardah, Gondolpara (French owned), Alliance, Arathoon, Anglo-India, Standard, National, Delta (which absorbed the Serajgungel, and the Kinnison. A luli of four years witnessed large extensions to the existing mills after which came the following series of new mills, besides further heavy extensions—Dalhousie, Alexandra, Naihati, Lawrence, Reliance, Belvedere, Auckland, Kelvin and Northbrook. The last decade has seen the construction of coined; money and brought the total of their Hukumchand, Birla, Shree Hanuman, Gagalbhai, 100ms up to 1.250". To illustrate the pros-Premehand and Agarpara Mills, which—with perity of the industry at this period we may the exception of the last-named—are under take the dividends paid by the Barnagore Indian ownership.

### Progress of the Industry.

THE record of the jute industry may well be said to be one of uninterrupted progress. The following statement shews quinquennial averages from the earliest year for which complete information is available with actuals for each year from 1917-18 up to 1931-32 and the figures in brackets represent the variations for each period, taking the average of the quinquennium from 1879-80 to 1883-84 as 100:—

			1		Number (in thousands) of					
	n	mber of ills at work.	Authorised Capital (in lakhs of Rs.)		Persons employed daily (average.)		Loc	oms.	Spindles.	
Average-	,		í <del></del> -		`		1		1

The production of the mills has increased to a still greater extent. The following figures show the exports of jute manufactures and the declared values for the same periods. The value of jute manufactures exported by sea in 1924-25 was over thirty-three times as great as the average value of the export in the period 1879-80 to 1883-84:—

The Indian Jule Mills Association now members of Committee — one of the most important, if not the most important, of the bodies affiliated to the Bengal Mr. B. M. Bula, Mr. C. C. C. C. Chamber of Commerce, was started under the tollowing circumstances:—In 1886 the existing mills, finding that, to epite of the constant opening up of new warks, working results were not favourable, came to an agreement, with the late S. E. J. Clarke, Secretary to the Chamber of Commerce as trustee to work chamber of Commerce, as trustee, to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajgunge. The first agreement, for six months dating from 15th February 1886, was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewals dictated the extent of the short time, which varied throughout the five years between 4 days a week. Besides short time, 10 per cent. of the sacking looms were shut down for a short period in 1890. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

The present officials of the Association are: Chairman.—Mr. H. Burn.

Mr B. M. Bula, Mr. G. M. Garrie, Mr S K. Scott, Mr. C. G. Cooper, M.L.C., Mr. A. Wilson, Mr. John Scott.

Working days.—With the introduction of the electric light into the mills in 1896, the working day was increased to 15 hours, Saturdays included, which involved an additional amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday, an agita-tion was got up in 1897 by the Mill European assistants to have the engines stopped at 2 assistants we have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up, but their action went no further than applying moral Suasion, backed by a somewhat half-hearted threat The Mill Association held meetings to consider the guestion and the movement was the The MIM ASSOCIATION neighbor were practically agreed as to the utility of early closing on Saturdays, but, more suo, could not trust themselves to carry it out without legislation. Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. Only a year or two ago the Jute Mills Association in despair brought out an American business expert, Mr. J. H. Parks, to advise them on the possibility of forming a jute trust with a view to about by the war, the quantity exported was exercising some control over the production 10 per cent, below that of the previous year, and price of jute. Mr. Parks came, and wrote Of the consumers the United Kingdom and

The working agreements referred to above have been followed by others, differing in points of detail, but with the same object in view namely the restriction of production. During the past 10 years a policy of curtailment of output has been continuously in force. By an agreement operating from October 1931 the mills in the membership of the Association, comprising some 95 per cent of the trade, have worked 40 hours per week, with 15 per cent of the total complement of looms sealed, and the agreement incorporates a clause which provides that the mills will not instal any extra productive machinery or relative buildings during the currency of the agreement, which will remain in force until three months notice of intention to alter the present working arrangements, or to terminate the agreement, has expired. Since the 1st November 1934 this agreement has been modified to the extent that the mills have worked with only 121 per cent. of the total complement of their looms sealed, and as from 1st May 1935 only 10 per cent will remain scaled Working hours, however, have continued to be restricted to 40 per week. In addition to this working arrangement, which as has been stated above applies only to the membership of the Association, there came into force with effect from 1st year with 41.292 looms a August 1932 an agreement with the five prindupin this outside the Association, namely Adamjee, Agarpara, Gagalbhat, Ludlow and Shree Hanuman, whereby these mills undertook to restrict their working hours to 54 per week up to 30th June 1933. With certain modifications this agreement has since been extended and is now a continuing agreement, subject to six months notice of termination being given by either party, but this notice could not be given before the 1st July 1934. Five of the Association mills-Premchand, Craig, Waverley, Megna and Nuddea-have also been granted the privilege of working 54 hours per week with a full complement of machinery.

An Association, styled the Calcutta Jute Dealers Association, has been formed in Calcutta to promote and to guard the common interests of its members as dealers in jute for local consumption. The members are balers and brokers of jute for sale to the jute mills in and around Calcutta. The present Committee is—Mr. H. A. Luke, Chairman. Members—Mr D. King, Mr. H. F. Mytton, Mr. I. D. C. Buist, Mr. A. C. Robertson and Mr. Muniay Flening.

exercising some control over the production and price of inte. Mr. Parks came, and wrote of the consumers the United Kinguom and a report which the Association promptly Italy took less, while the United States, France pigeon-holed because the slump was over and the demand was so predigious that there was the demand was so predigious that there was an Brazil took greater quantities. There was were, of course, no exports to enemy countries were, of course, no exports to enemy countries. which took more than 27 per cent, in the five years ending 1913-14, the pre-war year. The increase in the value accompanied by a decrease in the volume of exports was due to the very high range of prices during the months of September, October, November and December. Towards the close of the year under review prices steadily declined, and have since gone still lower.

> Jute Manufactures.—The value of the exports now approximates to Rs. 42 crores. In spite of the war with its attendant difficulties of freight and finance, the exports of gunny cloth showed an increase of Rs. 241 lakhs of which Rs. 163 lakhs were due to higher prices and Rs. 78 lakhs to an increase in the volume of exports. There were also an increase of Rs. 118 lakhs in the value of gunny bags exported. The number of bags shipped increased while the weight decreased, sand bags for war purposes being lighter than the ordinary bags for transporting grain. Exports to Australia in 1916-17 were a record. The United Kingdom with Australia took more than half of the number of bags exported while the United States took more than half of the

There were 74 mills at work throughout the year with 41,292 looms and 863,339 spindles. The number of persons employed was 285,881. There were no difficulties as regards the supply of labour.

The number of gunny bags shipped from Calcutta during 1922-23 declined from 386 million bags to 342 million bags, but the value increased from Rs. 13,87 lakhs to Rs. 15,82 lakhs. Shipments of gunny cloth rose from 1,120 million yards to 1,251 million yards valued at Rs. 15,92 lakhs and Rs. 24,24 lakhs respectively.

### Hemp and Jute Substitutes.

Experiments have been made during the last few years by the Agricultural Department of the Government of India with the Deccan hemp plant (Hibiscus cannabinus), which yields a fibre very similar to jute. As a result, a new variety of the plant, known as Type 3, has been obtained, which it is now proposed to introduce into several parts of India, and, as a beginning, the variety is to be grown on a number of estates in Bihar. A sample of the fibre prepared from this variety by the usual methods of ret-Effects of the War.—The official review light colour, well cleaned, and of good strength, of the Trade of India in 1916-17 says:—The light colour, well cleaned, and of good strength, of the exports of raw jute increased in the strength of the exports of raw jute increased in the strength of the exports of raw jute increased in the strength of the exports of raw jute in the preceding year. The estimated provinces, and Madras, where it is used for ropes yield of the crop was 12 per cent. above that of the previous year, viz., 1,490,000 tons of the previous year, viz., 1,490,000 tons of the strength of the crop was 12 per cent. Above that contains the previous year, viz., 1,490,000 tons of the strength of the strength of the crop was 12 per cent. Above that contains the previous year, viz., 1,490,000 tons of the strength of the crop was 12 per cent. Above that contains the previous year, viz., 1,490,000 tons of the strength of the crop was 12 ft. Iong, of an exceptionally light colour, well cleaned, and of good strength. It was valued at £18 per ton with Bimlipatam jute at £12 los., and Bengal first mark jute at £17 per ton. Deccan hemp has been grown laking. The provinces, and Madras, where it is used for ropes yield of the crop was 12 per cent. Above that colour, well cleaned, and of good strength. It was valued at £18 per ton with Bimlipatam jute at £12 los., and Bengal first mark jute at £17 per ton. Deccan hemp has been grown laking. Prior to the war, the United Kingdom's re-that one of the early effects of the war was quirements of hemp were mainly supplied by to firm up hemp prices. As far as Indian hemp the following countries in order of importance: the Philippine Islands, New Zealand, India, Russia, Italy and Germany. The opinion appears to be held that the effect of the war will be to cause Very considerable changes in the character of the fibre market. There will probably be labour difficulties, it is thought, in the preparation of the hemp crops of Russia and Hungary and it is not unlikely that the world will look to countries such as India for the supply of fibres which may be used as substitutes for the Euro-197,412 cwts. to 269,487 cwts. and the value pean varieties of hemp. There can be no doubt from Rs. 26.93 lakhs to Rs. 36.68 lakhs.

is concerned, values were persistently depreciated during the first six months of 1914 owing to large stocks held; but the closure of the Russian hemp market on the outbreak of war resulted in a marked improvement in values, and there was a keen demand and a considerable rise in price. Exports from Calcutta during 1922-23 made a great recovery from the previous year. The quantity advanced by 37 per cent, from

### THE WOOL INDUSTRY.

Wool exported from India consists not only details are available, was 12 of which five were of wool grown in India itself, but of imports in the United Provinces. The paid up capital from foreign sources, these latter coming into of these mills was Rs. 68,28,576 and the number note foreign sources, these fatter coming into India both by land and by sea. Imports by sea come chiefly from Persia, but a certain quantity from Persia she comes by land, while the main imports are from Afghanistan, Central Asia, Tibet and Nepal. Quetta, Shikariana Asia, Tibet and Nepal. pur, Amritsar and Multan are the main col-lecting centres for wool received by land from Afghanistan and Persia, whence it is almost invariably railed to Karachi for subsequent export overseas.

Imports and Exports.—A considerable amount of wool is imported annually from Tibet, and in normal years, from Atghanistan. Imports of raw wool in 1933-34 decreased from 7.2 million ibs. valued at Rs. 42 iakhs to 5.1 million lbs. valued at Rs. 34 lakhs. Australia with her contribution of 2.8 million lbs. valued at Rs. 18 lakhs still remained the largest supplier, although this quantity was less by 0 2 million ibs. as compared with imports from that country in 1932-33.

Production in India.—The production of wool in India is estimated at 60 million lbs. the estimate being arrived at from the available figures of the number of sheep in the country and their estimated yield per fleece, the average quantity of wool yielded per sheep per annum being taken at only 2 lbs.

All Indian wools are classed in the grade of carpet wools, and it is correct to say of perhaps fully haif the breeds of sheep found on the plains of India that they yield a kind of hair rather than of wool. They are reared chiefly on account of the mutton, and the fleece has been generally regarded as of subsidiary interest. In many respects, in actual fact, the Indian plains sheep approximate more nearly to the Indian cattle and sheep, particularly with rein manual of yarns, but more generally by the manufacture
Indian cattle and sheep, particularly with reof carpets of a fine quality which find a ready
spect to the Madras type, that they "resemble a greyhound with tucked up belly, having
some coarseness of form, the feet light, the
a high price.

of looms and spindles was 1,447 and 69,293 respectively. The average number of persons respectively. The average number of persons employed daily in these mills was 4,240. There are no complete figures of production, the last year for which they are available being 1921 when the quantity of woollen goods produced was 3,820,879 lbs. valued at Rs. 1,17,99,396. As regards Indian States there are four woollen mills in Mysore which produced woollen goods of 2,700,201 lbs, in weight in 1930, the value being Rs. 17,83,256. The bulk of the wool used by the Indian mills is Indian wool, although it is supplemented to some extent by the importation of merinos and cross-breds from Australia for the manufacture of the finer classes of goods. Their market for manufactured goods is almost entirely in India itself. Imports of woollen piecegoods in 1932-33 increased by over 8 million yards as compared with the accordance of the control of the co with the preceding year, and even exceeded the imports of 1929-30 by about a million yards. Imports came chiefly from France, Italy, Japan and the United Kingdom. There was a considerable increase in the number of woollen shawls imported in 1932-33, Germany being the largest single source of supply. Imports of carpets and floor-rugs declined to 188,000 lbs. in 1932-33 from 267,000 lbs. in 1931-32. The share of Persia in this trade receded considerably, but imports from the United Kingdom rose.

Blanket weaving and carpet manufacture are carried on in various parts of the country, notably in the Punjab and the United Provin-ces. Woollen pile carpets are made in many of the jalls. Amritsur had a considerable trade at one time in weaving shawls from pashm, the fine under fleece of the Tibetan goat, but its plains sheep approximate more nearly to the place has been taken to some degree by the ma-accepted type of the goat rather than of the nufacture of shawls from imported worsted sheep. Short remarks in his manual on yarns, but more generally by the manufacture

## Silk.

In the early days of the East India Company the Indian Silk trade prospered greatly, and various sub-tropical races of the Silkworm were introduced. But the trade gradually declined for the following reasons:—

In the seventeenth and eighteenth centuries India's chief competitor in the silk trade was the Levant Company. Successful efforts, how-ever, were made to acclimatise in Europe one ever, were made to accumatise in hardye one or two races of a temperate worm, procured from China and Japan. When sericulture became part of the agriculture of France and Italy, a quality of silk was produced entirely different from that of India and Turkey, and its appearance created a new demand and organized new markets.

All subsequent experience seems to have established the belief that the plains of India, or at all events of Bengal, are never likely to or at all events of Bengal, are never likely to produce silk that could compete with this new industry. On the lower hills of Northern India, on the other hand, a fair amount of success has been attained with this (to India) new worm, as, for example, in Dehra Dun and Kashmir. In Manipur, it would appear probable that Bombyx mori, possibly obtained from China, has been reared for centuries. The caprice of fashlon has, from time to time, powerfully modified the Indian silk trade. The special properties of the korah silk were formerly much appreciated but the demand for them has now appreciated but the demand for them has now declined. This circumstance, together with defective systems of rearing and of handreeling and weaving, accounts largely for the present depression in the mulberry silk trade of India.

Mulberry-feeding worms.—Sir George Watt states that in no other country does the necessity exist so pressingly as in India to treat the subject of silk and the silk industries under the subject of silk and the silk industries under two sections, viz., Bombyoddae, the domesticated or mulberry-feeding silkworms; and Saturnijdae, the wild or non-mulberry-feeding worms. In India the mulberry worm (Bombyz Mori) has been systematically reared for many centuries, there being six chief forms of it. In the temperate tracts of India various forms of Morus alba. (the mulberry of the European silk-preperate tracts of India various forms of Morus alba, (the mulberry of the European slik-producing countries), are grown specially as food for the slikworm. This is the case in many parts of the plains of Northern India, Baluchistan, Afghanistan, Kashmir, and along the Himalays at altitudes up to 11,000 feet. The other species area more lawally grown for the other species even more largely grown for the Indian silkworm is M. Indica of which there are many distinctive varieties or races. This is the most common mulberry of Bengal and Assam as also of the Nilgiri hills.

India has three well-known purely indigenous The first is widely distributed on the lower hills, more especially these of the great central table land, and feeds on several jungle trees. The second is confined to Assam and Eastern Bengal, and feeds on a laurel. The third exists in a state of semi-domestication, being reared on the eastor-oil plant. From an art point of view the mugs silk is the most interesting and attractive, and the cocoon can be reeled readily. The carried out at Pusa to improve the Mulberry

eri Silk, on the other hand, is so extremely difficult to reel that it is nearly always carded and spun—an art which was practised in the Khasi Hills of Assam iong before it was thought of in Europe.

Experiments and results.—Numerous experiments have been made with a view to improving sericulture in India. French and other experts are agreed that one of the causes of the decline of the silk industry in India has of the decline of the silk industry in India has been the prevalence of diseases and parasites among the worms, the most prevalent disease being pebrine. M. Lafont, who has conducted experiments in cross breeding, believes that improvement in the crops will be obtained as soon as the fight against pebrine and other diseases of the worms is taken up vigorously by the producers of seed and the rearers of worms while improvement in the quality of worms, while improvement in the quality of the cocoons will be obtained by rearing various races, pure and cross breeds.

In Kashmir and Mysore satisfactory results have been obtained. In the former State sericulture has been fostered on approved European principles with Italian recling machinery, seed being imported annually on a large scale. In 1897 in Mysore Mr. Tata, after selecting a plantation and site for rearing houses, sent to Japan for a Superintendent and trained operatives. The Mysore authorities have made a grant of Rs. 3,000 a year to the Tata farm in return for instruction given to the people of Mysore in Japanese methods of growing the nulberry and rearing the insects. The products of the Mysore State are exported to foreign countries from Madras. The work of the Salvation Army is also noteworthy in various parts of India. They have furnished experts, encouraged the planting of mulberry trees, and subsidised several silk schools. The draft prospectus has been issued of a silk farm and institute to be started at Simla under the auspices of the Salvation Army. The Lieut.-Governor of the Punjab has permitted the school to be called after his name, and the Punjab Government made a grant of Rs. 2,000 towards the expenses. Sir Dorabii Tata has also made a donation of Rs. 1,000. The Bengal Silk Committee under the guidance of some French experts have conducted cross-breeding experiments with a view to establish a multi-voltine hybrid of European quality. There is a Government sericultural farm at Berhampore, where, it is said, a pure white multi-voltine of silk worm is reared. The results of the Bengal Committee's labours may be summed up as follows: the only really effective method of dealing with the problem is to work up gradually to a point at which the whole of the seed cocoon necessary for the province will be supplied to rearers under Government supervision, and to establish gradually a sufficient number of large nurseries throughout the silk districts of the province.

In 1915 there was issued by the Agricultural Research Institute, Pusa, a Bulletin (No. 48 of 1915) entitled " First Report on the Experiments

Silk Industry." In a short Prefatory note largely on the willingness of the rearers to pay Mr. Bainbrigge Fletcher (Imperial Entomo- an adequate price for pure seed. logist) explains that the object of the Bulletin A pamphlet was published in 1915, by Mr. M. is to place on record some of the more important N. De, Sericultural Assistant at Pusa, which

Central Nurseries.—The report of the workers is maintained. By attention to such Agricultural Department, Bengal, for the year simple points as the stifling and storage of ending June 30, 1913, gives an account of a cocoons and the temperature and quality of the scheme which has been devised with the object water used in the recling pans, great improve-of reclaiming the silk industry. The aim of ments can be effected in most silk centres in the scheme is gradually to establish throughout Bengal and other districts.

Exports of Silk.—As a result of the war purseries with reserving houses and thus enable the scheme is gradually to establish throughout the silk districts a sufficient number of central the scheme is gradually to establish throughout the scheme workers is maintained. Exports of Silk.—As a result of the war nurseries with rearing houses and thus enable the trade has shown in some degree signs the whole of the seed cocoons required in the of revival from its decadent condition, both as

experiments which were commenced at Pusa, contains practical hints on improved methods in the year 1910 and have since been carried which are recommended to be used for reeling on in the endeavour to fix a superior multivoltine; mulberry silk in Bengal and other silk productace of the Mulberry Silkworm which would not ing districts. It has been found that, by the degenerate and which would yield silk better provision of two small pulleys to the ordinary both in quality and outturn than that supplied. Bengal type of reeling machine, superior thread by the multivoltine races which are reared at can be obtained, the cost of the extra apparatus is merely nominal (five or six annas per machine) whiist the suitability of the machine for cottage

province to be supplied under Government regards its volume and value. The value of supervision, it is believed that this is the exports during 1915-16 improved by Rs. 12 only really effective method of dealing with lakis to Rs. 27½ lakis, of which raw silk active problem. A number of the existing smaller counted for Rs. 24 lakis. In 1916-17 the total nurseries were closed during 1913 and others exports rose to Rs. 54½ lakis. In 1932-33 are being converted into enlarged and improved exports of raw silk and silk manufactures central nurseries with rearing houses complete, amounted to Rs. 318 lakhs in value, compared The ultimate success of the scheme depends with Rs. 334 lakhs in the previous year.

# Indigo.

a genus of Leguminosae which comprises some 300 species, distributed throughout the troplcal and warm temperate regions of the globe, India having about 40. Western India may be described as the headquarters of the species, so far as India is concerned, 25 being peculiar to that Presidency. On the eastern side of India, in Bihar, Bengal, Assam and Burma, there is a marked decrease in the number of species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India, it was procured from the Western Presidency and shipped from Surat. It was carried by the Portuguese to Lisbon and sold by them to the

Indigo dyes are btained from the Indigofera, been given up—partly on account of the high genus of Leguminosae which comprises some duties imposed upon it and partly because sugar and coffee were found to be more profitablethe industry was revived in India, and, as one of the many surprises of the industry, the province of Bengal was selected for this revival. It had no sooner been organised, however, than troubles next arose in Bengal itself through misunderstandings between the planters, their cultivators and the Government, which may be said to have culminated in Lord Macaulay's famous Memorandum of 1837. This led to another migration of the industry from Lower and Eastern Bengal to Tirhut and the United Provinces. Here the troubles of the industry did not end, for the researches of the chemical laboratories of Germany threatened the very Portuguese to Lisbon and sold by them to the desire to dyes of Holland, and it was the desire to obtain a more ample supply of dye stuff that 13d to the formation of the Dutch East India are now advancing rapidly with synthetic Company and so to the overthrow of the Portuguese supremacy in the East. Opposition to indigo in 17th century Europe was keen owing to its interference with the wood industry, but it was competition to obtain indigo from other sources than India that led on the first decline of the Indian indigo industry.

In the middle of the eighteenth century, when the cultivation of indigo in the West Indies had existence of any natural vegetable dye. They

mnertainty. The issue is not the advantage of Bill was passed in the Imperial Legislative new regulations of land tenure, but one exclu-Council in 1918. It provides for a cess on sively of natural versus synthetic indigo. (See indigo exported from India for the scientific Watt's "Commercial Products of India.") In investigation of the methods of sultivation this connection it may be noted that increases in the price of coal in England, due to labour in the price of coal in England, due to labour difficulties, have greatly strengthened the position of natural indigo. In February 1915 a conference was held at Delhi when the possibility of assisting the natural indigo industry was considered from three points of view—agricultural, research and commercial. The agricultural research and commercial. The agricultural or botanical side of the question is fully discussed by Mr. and Mrs Howard of Pusa in Bulletins Nos. 51 and 54 of the Agricultural Research Institute. Other aspects of the question have been fully examined in the Agricultural Journal of India by Mr. W. A. Davis, Indigo Research Chemist 1933-34 and amounted to 500 cwts. as against by Mr. W. A. Davis, Indigo Research Chemist 1933-1933.

can scarcely help being described as of great to the Government of India. An Indigo Cess and manufacture of indigo, the proceeds of the cess being received and expended by Govern-

### OILS AND OIL CAKES.

Oilseeds .- The total exports of Indian Oilseeds of all kinds improved in quantity from 7,33,000 tons in 1932-33 to 11,24,000 tons in 1933-34 and from Rs. 11,31 lakhs to Rs 13,66 lakhs in value The exports of oil cakes showed a very slight increase from 2,86,700 tons to 2.87,000 tons in 1933 34 but the value recorded fell away from 197 lakhs to 165 lakhs.

A pamphlet on the subject which was publish ed by the Commercial Intelligence Department points out that it is both economically and industrially unsound for India to export her oil seeds instead of manufacturing the oils and oil cakes in India. It allows other countries to reap the manufacturers' profits and at the same time deprives Indian agriculture of the great potendeprives indian agriculture of the great potential wealth, as cattle-food and manure, contained in the oil cakes. An immense quantity of oil is, as a matter of fact, already manufactured in this country by more or less crude processes. Village oil mills worked by bullocks and presses worked by hand exist in all parts of the country and supply most of the local demand for oil. There has also been a great increase in recent years in the number of oil mills worked by steam or other mechanical power. These crush all the commoner oil seeds and development has been especially marked in the case of mustard oil, castor oil and ground-nut oil. In spite of all this there has been a perceptible diminution in the export of oil from India, particularly of cocoanut oil and linseed oil, and an increase in the export of oil secds, which is particularly marked in the case of copra and groundnuts. The situation created by the War has naturally led to too much discus-

There are three difficulties with which any proposal to develop in India an oil-milling industry on a great scale is faced. In the first place, there exist high protective tariffs in European countries which encourage the export from India of the raw material rather than the manufactured product. Secondly, there is a better market for the oil cake in Europe than in India and the freight on oil seeds is less than the freight on cake. Thirdly, it is much easier and less expensive to transport oil seeds by sea than it is to transport oil. While this has been the position in the European markets, Indian made oils, other than cocoanut oil, have made enough headway in Eastern markets to suggest the possibility of a development of those markets.

The problem of finding a market for oil cakes is equally important. The value of oil cakes is much better appreciated in Europe than in India. The Indian cultivator is prejudiced against the use of machine-made cake as a cattle food or as manure because he considers that it contains less oil and therefore less nourishment than the village-made cake. He is therefore unwilling to buy it except at a reduced price. His prejudices on this point have no justification in fact since experts are agreed that mill cake is a better food for cattle than village-made cake. Even when the mil cake contains less oil than the village cake, there is still more oil in the cake than cattle can digest. The excess of oil in the village cake. where it exists, is a drawback and not an advantage to the use of the cake as food. A considerable amount of demonstration work has been done by the Agricultural Departments of Government in order to remove the culti-vator's prejudices and there is said now to be sion of the possibility of developing on a large vator's prejudices and there is said now to be scale the existing oil-milling industry in an increasing demand for most classes of india. mill cake.

## Tea.

Among plantation crops in India tea is the said, however, that the foundations of the most important. The indigenous tea plant, present tea industry were laid between 1856 growing in a wild condition, was first discovered in Assam about 1820. It soon drew the attention of the East India Company, which after some enquiries started an experimental garden in 1835. After working for five years it was handed over to the Assam Company. It may be

The following table shows the growth of the industry since 1875:---

Progress of the Industry.

Year.	Area under tea in 000 acres.	Production in 000,000 lbs.		Year.		Area under tea in 000 acres.	Production in 000,000 lbs.
1875-79 (average). 1880-84 , 1885-89 , 1900-1904 , 1915 , 1920 ,	173 241 307 500 533 594 654	34 57 90 195 249 352 322 335	1926 1927 1928 1929 1930 1931 1932 1933	average) ,, ,, ,, ,, ,, ,, ,, ,,	: : ::	679 690 702 712 802 807 809 816	364 361 372 401 391 394 433 383

It will be seen from the above table that during the last sixty years, while the area under tea has risen by over 400 per cent., the production has increased more than ten times.

Assam and Bengal are the two most important centres of the tea industry in India, Assam alone accounting for more than half the total production.

Assam and Bengal are the two most important

<sup>·</sup> Less than 500 acres.

Although India produces such large quantities of tea its consumption of tea is comparatively very little, about 57 million lbs. as compared with 421 million lbs. in the United Kingdom and the consumption per head is only .18 lb. as compared with 9.20 lbs. in the United Kingdom. The low domestic consumption, however, enables India to export large quantities to other countries the principal among which is the United Kingdom. It is estimated that India supplies about 40 per cent. of the world demand of this commodity. In 1933-34, 87 per cent, of the total quantity of tea produced in India was exported abroad.

the world were faced with declining prices and accumulation of stocks. The preference granted to Empire teas did not prove sufficiently effective to check the consumption of cheap Java teas. Besides this there was only a small difference in the price of medium and common teas and there was thus no inducement to grow the former.

To check over-production a scheme was therefore introduced to restrict production and to limit exports. A Bill giving legislative effect to the scheme was passed at the autumn session of the Legislative Assembly in 1933. The beneficial effects of this measure are already being seen. During the first year of its operation the hopes engendered by the regulation scheme have, to a The year 1932-33 was one of the worst for engendered by the regulation scheme have, to a the tea industry. In addition to the world-wide considerable extent, been justified, and the depression, there was considerable over-production industry has been enabled to meet, what have with the result that producers of tea all over undoubtedly been, very disturbing conditions.

The following table explains briefly the position as regards the export of tea from India:—

	Ye	ar.		Amount exported (million of lbs.)	Value in lakhs of rupees.	Col. 3 as percentage of value of total exports.
	1			2	8	4

To America	5.7	7.5
To Australia	1.6	1.4
To Africa	1.9	0.9
	100	100

A considerable quantity of Indian tea imported into the United Kingdom is normally re-exported

to other foreign countries.

From 1923 to 1927 the prices obtained for tea were good; but in 1928 a decline set in, and in 1929 and 1930 prices fell further still. The price of Indian common tea particularly fell more than that of others. While as compared to 1923, 'all tea' fluctuated in the London market

within a range of 25 per cent. Indian common tea fell by about 50 per cent.

In 1932-33 the fall in tea prices was almost catastrophic. The average price of tea per lb. realised at the Calcutta auction sales during 10000 and 10000 are for in the catastrophic. 1932-33 was 5 as. 2 p. as against 6 as. 5 p. in 1931-32 and 9 as. 4 p. in 1930-31. The position, however, improved considerably during 1933-34, when the prices realized averaged 8 as. 1 p.

The following table gives the average wholesale prices of tea in Mincing Lane from 1922-30, in pence per lb. :-

	Yea	r.	North India.	South India.	
1922	•••			15.46	14.00
1923				18.76	18.14
1924				19.92	19.02

1933-34			9 7(a)	160(a)
		1	4 10(b)	81(b)

For teas sold with export rights. " for internal consumption.

The fall in tea prices greatly affected the profits of tea companies. The following table which shows the profit per acre of 65 tea companies gives an idea of the effect on profits of the fall. in prices .--

Profit per	Acre	of 65	Indian	T'ea	Companies.
------------	------	-------	--------	------	------------

	1913.	1924.	1928.	1929.
Average profit per mature acre	£ 6–10–7	£ 15-2-0	£ 10-0-0	£ 6-9-0
Average profit in pence per lb.	2.6	6.4	3.84	2.26
Average crop per mature acre	599 lbs.	560 lbs.	625 lbs.	684 lbs.
<u></u>		1		l

It is quite clear from the above table that, should be set up to prevent free movement of although the yield per acre has considerably labour from one part of India to another. increased, the profits per acre are actually lower than in 1913.

The main reasons of the slump in the tea its place. industry are over-production and intense competition, particularly from Java and Sumatra. In order to counteract the adverse influence of the former, an agreement to restrict output, was reached early in 1930 by associations of teagrowers. For India and Ceylon the degree of restriction to be undertaken varied according to the quality of the tea produced, being greater for the lower qualities than for the finer.

Indian, Ceylon and Netherlands East Indies employers' expense. produces, for five years from 1933 onwards exports are to be restricted and extension of

During the year 1932-33 there was a considerable fall in the wages of workers on toa piantations. The average wages of men, women and children in the Assam Valley were Rs. 10-10-4, 7-14-6 and 5-11-6, respectively, as compared with Rs. 12-8-5, 9-8-7 and 6-15-8, respectively, in 1931-32.

Under the Ottawa agreement Indian Tea has been granted preference by Great Britain

The following are the important recommendations made by the Royal Commission on Indian Labour in regard to the Tea Industry. The recommendations contained therein are for by legislation. very vital to the future welfare of the industry and the principal amongst them have therefore been reproduced below .-

- No further legislation making a breach of contract of service a criminal offence should be countenanced.

- The Assam Labour and Emigration Act should be repealed and a new measure set up in
- (4) The Assam Labour Board should be abolished.
- (5) The Government of India should appoint a Protector of Immigrants in Assam to look after the interests of emigrants from other Provinces who have not yet settled in Assam.
- (6) Every future assisted emigrant to an Assam tea garden should have right after the According to the latest agreement between the first three years to be repatriated at the
- A worker dismissed before the expiry of cent. of the present planted area. him, unless it is established that the dismissal was due to wilful misconduct.
  - (8) The establishment of statutory wage-fixing machinery, if practicable, is desirable, and there are reasons for believing that, if proper methods are adopted, a practicable scheme can be devised.
  - (9) Before egislation is undertaken, one enquiry should be undertaken as to the most suitable form of machinery, the actual rates paid and the variation in these rates between district and district and garden and garden.
  - (10) Maternity benefits should be provided
  - (11) The employment, either directly or with their parents, of children before the age of 10 years should be prohibited by law.
  - Boards of Health and Welfare should be established under statute for convenient planting areas.

(2) The power conferred by section 3 of the Assam Labour and Emigration Act to prohibit implemented by the Tea Districts Emigration recruitment in Assam in particular localities Labour Act (XXII of 1932) which came into should be withdrawn immediately and no barrier force on 1st October 1933.

### Coffee.

Such historical evidence as is available on the rose and amounted to 1,73,000 cwts subject shows that coffee was first introduced into India from Mccca as early as the 16th century. The first coffee garden was planted by a European about 1840 but the industry thus started did not flourish till 1860.

The production of coffee in India is mostly confined to the South The area under coffee in 1932-33 (including plantations of less than 10 acres) was 1,77,000 acres, an increase of 19 per cent. over the figures for 1925-26.

The total exports of coffee increased from 1,50,000 cwts, in 1926-27 to 2,77,000 cwts, in 1927-28. In 1928-29 and 1929-30 the shipments declined and amounted to 1,98,000 cwts and 1,84,000 cwts. respectively, but exports again rose in 1930-31 and amounted to 2.93,000 cwts. In 1931-32 the shipments declined to 1 56,000 cwts, but in 1932-33 exports again Bahrein Islands.

principal destinations of Indian coffee are the United Lingdom and France. Shipments to the United Kingdom rose from 44,000 cwts in 1931-32 to 52,000 cwts in 1932-33 and those to France from 43,000 cwts, to 54,000 cwts, while there was a slight increase of 900 cwts in the exports to Norway. Other European countries, namely, Germany and Italy reduced their demands from 16,000 and 6,000 cwts, to 13,000 and 5,000 cwts., respectively. Shipments to Iraq and Australia (including New Zealand), showed an increase, while there was a decicase in the shipments to Bahrein Islands.

Not only does India export coffee in large quantities but it also imports it chiefly from Java, Ceylon and the Straits Settlements which it re-exports to Mascat Territory, Iraq and the

The following table gives the figures of the production and exports of Indian coffee :-Production and Export of Indian Coffee in thousands cwts.

times the amount consumed in 1925.

The total production of cured coffee in India during the season 1932-33 was nearly 32½ million lbs. as compared with 34 million lbs. during the previous season Exports declined from 293,000 cwts. in 1930-31 to 156,000 cwts in 1931-32. The pre-war and post-war averages were 255,000 cwts. 216,000 cwts. 226,000 cwts. restectively. Local consumption of Indian coffee which has been expanding expanded still further owing to the restrictions on imported coffee. As regards exports, the United Kingdom and France which constitute the principal markets, both increased their respective off-takes very considerably and required 52,000 cwts. and 54,000 cwts. as against 44,000 cwts. and 43,000 cwts. respectively in 1931-32. The total value

Making allowance for the re-exports from at 1.01,174 of whom 64,336 were permanently India of imported coffee, the consumption of coffee in India in 1933 was approaching six outside labour 21,210) and 36,838 temporarily employed (outside labour), as compared with 96,706 persons (39,157 garden and 17,153 outside labour permanently employed and 40,396 temporary outside labour) in 1931-32.

> The general trade depression did not fail to affect the coffee industry but in addition to the general slump in trade there was an additional factor which depressed coffee prices and this was the exceptionally heavy crops of Brazilian coffee. Since the year 1925 there has been a general downward trend in coffee prices. Until the end of 1929 the fall was comparatively slow, but since then it has been very rapid. This will be clearly seen from the fact that while the average wholesale price of Indian coffee in London was 140s in 1923 and 127s, in 1929 it fell to 86s, in 1930.

of the exports of coffee was 1,01 lakhs in 1932-33.

The daily average number of persons employed in the plantations during 1932-33 was returned

The declared value per cwt of coffee was against Rs. 65-8-1 in 1931-32 as against Rs. 65-8-1 in 1930-31. It rose to Rs, 63-6-7 in 1932-33. The wholesale price in India per cwt. in April in the plantations during 1932-33 was returned

## Sugar.

Indian sugar industry has made phenomenal progress in spite of the economic depression. Besides the duty, various other special advantages - consequences of the depression—have helped the rapid growth of the industry. Low prices of land and material, low price of machinery low price of cane all these factors have contributed to the remarkable development of the industry As a result. India is now the largest signar producing country in the world. And, the capital invested in the industry is vationally estimated at between Rs. 15 and Rs. 20 crores

An important landmark in the history of the sugar industry was the year 1930-31, when the question of protection was referred to the Tariff Board by Government, Pending consideration of the Tauff Board's report, the revenue duty was of the Taili Board's report, the revenue duty was abstricted among the provinces "for the cultaried to its, 7-4 per cwt in March, 1931 and operation of co-operative societies among the cane-cut (amounting to Re 1-13 per cwt.) was proven so as to help them in securing 'fair' imposed in September, 1931. In accordance with the Taili Board's recommendations, try now enjoys a protection of Rs 7-12 per cwt.

Sheltered behind an adequate tauff wall, the Government issued a communique on January 30, 1932, fixing the protective duty at the rate of Rs. 7-4 per cwt. on all classes of sugar until March 31, 1938 A further enquiry before the end of that period into the question of continuing protection to the industry was also provided for. At present, therefore, the total import duty on foreign sugar amounts to Rs. 9-1 per cwt.

> With a view to check a too rapid growth of the industry under artificial stimuli and in order to replace losses of revenue from this source, an excise duty of Re. 1-5 per cwt. on factory produced sugar was imposed during the financial year 1934-35. Besides, it was proposed to set aside from the proceeds of the excise duty an amount equivalent to one anna per cwt. to be distributed among the provinces "for the purpose of assisting the organisation and opera-

Statistics given below, show the progress of the industry in recent years :-

		_				
		No of Fac-	Quantity of	Quantity Refind from	Khandsari

1929-30	~~. ı	27	89,768	21,150	200,000	310.918
1930-31	- 1	29	119,859	31.791	200,000	351,650
1931-32		31	158,581	69,539	250,000	478,120
1932-33		58	290,177	80,000	275,000	645,177
1933-34		123	459,600	95,000	225,000	779,600

The area under cultivation of sugar-cane has help pace with increased moduction, from 2,677,000 acres in 1929-30, it has increased to 3,349,000 acres in 1933-34. Frior to 1932-33, there were only 21 cane factories, 27 new factories were added in 1932-33 alone while another 65 new incrories were started in the tollowing year-an increase of 400 per cent. in two years in two years Production of sugar in India may be classified under three main heads—by modern factories working with cane, by modern refineries working with raw sugar (qur) and by Indigenous open pan concerns Sugar production in India a few years ago amounted approximately to hall the estimated total consumption within the country. Since 1931-32, the volume of factory produced sugar has increased by approximately 300 per cent.

Along with a rapid increase in internal production, there has been a sharp decline in imports. For instance from an average of approximately one million tons in the years uptill 1930-31, imports fell by about 45 per cent in the following vear and dropped to about 250,000 tons in 1933-34. As a result of dwindling imports, Government are loosing revenue from this source, Despite, or may be because of, the heavy duty, the yield from this source diminished from over Rs 10 crores in 1930-31, to about Rs. 3 81 crores for the financial year ended March 31,1935.

In view of the astounding growth of the industry within such a short time, the following table of forecast of annual consumption and Imports of sugar into India up to 1936-37, is of interest .-

	1932-33 (Actual) Tons.	1933-34 (Est.) Tons.	1934-35. (Est.) Tons.	1935-36. (Est.) Tons.	1936-37. (Est.) Tons.

of Agricultural Research, India, it appears that home production in 1936-37 should outstrip consumption unless internal demand materially consumption unless intering using a consumption in India has appreciably gone down by about 19 per cent. per year. Stimulating consumption is, therefore, one of the pressing problems areing the industry at present. Another problem before the industry is the need for a thorough overhauling of the existing machinery of distribution Some believe that the

From the forecast above, prepared by Mr. R. C., areas like the U.P. and Bihar, the sugar belt Srivastava, Sugar Technologist, Imperial Council of India, has yet to be tackled by the industry.

During the latter part of 1934, a conference of Indian sugar-mull-owners was held at Calcutta to discuss the question of a marketing organisation. In order to eliminate as far as possible imports of foreign sugar, the problem of disposing of the surplus production of the sugar belt at various port towns at competitive pieces was discussed. The proposal to form a central marketing board was mooted in the conference and though tentative agreements were annived nely of distribution some beneve that the tank the land though constants agreements were arrived an equitable distribution between the various facing the industry, the proposed board was not parts of the country. Excess production in set up by the end of the year 1934.

### INDIAN TOBACCO.

The tobacco plant was introduced into India erop, but the latter gives better quality. There by the Portuguese about the year 1605. As is always a great demand on the market for in other parts of the world, it passed through both the Havana and the Burma tobacco. The smooth leaves of the Havana plant are used button over India is one of the numerous expenses. The smooth leaves of the Havana plant are used for the wrappers and the coarser liurmese leaf amples of the avidity with wind apples of the avidity with a substitution of the avidity with a substitution of the avidity with a substitution of a substitution of the substitution of t amples of the avidity with which advantageous fecting the native methods of curing and manufacturing tobacco. These were often repeated, and gradually the industry became identified with three great centres: namely, (1) Eastern and Northern Bengal (more especially the District of Rangpur); (2) Madras, Trichinopoly, Dindigul, Coconada and Calicut in Southern India; and (3) Rangoon and Moulmeln in Burma. Bengal is the chief tobacco growing Province, but little or no tobacco is manufactured there. The chief factories are near Dindigul in the Madras Presidency, though, owing to the imposition of heavy

are near Dindigul in the Madras Presidency, though, owing to the imposition of heavy import duties on the foreign leaf used as a cigar wrapper, some cigar factories bave been moved to the French territory of Pondicherry. The question of improving the quality of Indian tobaccos has received the attention of the Botanical section of the Agricultural Research Institute, Pusa, and three Memoirs nave been published recording the results of 29,000,00 imposting times in that direction. The immediate labels are the contractions in that direction. research Institute, Pusa, and three Memoirs nave been published recording the results of livestigations in that direction. The immediate problem at Pusa is the production of a good cigarette tobacco. Many attempts have been made in the past to introduce into India the best varieties of cigarette tobacco from In America, but the results have been disappointing. It is now hoped to bulld up by hybridization new kinds of tobacco, suited to Indian conditions of growth, which possess in addition the qualities necessary to obtain a better price.

Area under Cultivation.—The cultivation of tobacco is very widespread in Burma. The two main varieties are called "Burmese tobacco" and "Havana tobacco." Of the bacco" and "Havana tobacco." of the to the Federated Malay States and Hongkong, Burmess tobacco there are two main varieties Except for Hongkong, China practically withdrew from the market, her offtake amounting "Seywet-gyun," a smaller-leaved variety with to only 2,000 lbs. as against 72,000 lbs. in pointed leaves. The former yields a heavier 1932-33 and 2,16,000 lbs. in 1931-32.

for the filling.

localities ranging from December to June, but the bulk of the crop is harvested during the months of February, March and April. The leaves when quite dry, are assorted and placed in heaps in stacks to ferment. They are then tied into bundles of 25 or 30, a uscless leaf being employed for tying each bundle. The leaves are laid perfectly flat, the bundles being fan-shaped. In this condition they are baled, the brom-like and projecting outwards. By the broom-like ends projecting outwards. By varying the degree of fermentation of the leaves, different qualities of tobacco are obtained. A black variety is used in India for cake tobacco, and this is the most common product, but a certain amount of yellow leaf is grown for cigar

against 4 4 million lbs., Japan 3 3 million lbs. as against 3.1 million lbs and the Netherlands 3.5 million lbs. as against 1 7 million lbs in 1932-33. Shipments to the Straits Settlements amounting to 1 2 million lbs showed an increase of 0.4 million lbs. or of 50 per cent. There were also concurrent increases in the shipments

# The Cocaine Traffic.

The form of cocaine chiefly used in India is newspapers, books, toys and piece-goods and Cocaine Hydrochloride. This salt forms light in trunks which have secret compartments, shining crystals, with a bitterish taste, and is The retail trade in the towns is very cominingly soluble in half its weight of water. The alkaloid organized and controlled. In addition to the cocaine—of which this is a salt—is obtained and controlled and controlled and controlled and controlled and controlled and controlled and controlled. cordine—of which this is a sait—is obtained actual retailers, since is a whole army of watching from the dried leaves of the Erythroxylon Cocaine men and patrols whose duty is to shadow the which grows in Bohvia, Peru, Java, Brazil and other parts of South America. The leaves are when a raid is contemplated. During the War most active when freshly dried and are much several cases of importation of Japanese cocaine used by the Natives as a stimulant. Tea made were detected, the importers being Japanese. and Chinese sailors. The original marks on is said to be very effectual in keeping people the packets and phials are usually destroyed awake. In India the Coca plant seems never so that the name of the manufacturing firm to have been cultivated on a commercial scale may not be found out. It has been grown experimentally in the tea districts of Ceylon, Bengal and Southern India and has been found to produce a good quality in India for 1930-31 states that during the and quantity of cocaine. As the plant has not year a total of 17,345 grains of cocaine were been seriously cultivated and as there is no seized by the Customs authorities, of which possibility for the present of the drug being 1,792 onnees were valued at approximately manufactured in India, no restrictions have as Rs. 1,80,000. yet been placed on its cultivation.

Spread of the habit.—The cocainc traffic in India which seems to be reaching in alarming proportion in spite of legislation and strict preventive measures is of comparatively recent growth; though it is impossible to estimate how widespread it was in 1903 when the Bombay High Court for the first time decided that cocaine was a drug included within the definition of an intoxiceting drug in the Bombay Abkari in different provinces. A summary of the law Act. Since that date the illegal sale of cocaine in Bombay is as follows: No cocaine can be in India has largely increased and the various

The amount seized is either given to Hospitals in India or destroyed. It is no longer possible to buy cocaine from any betchut seller as it was ten years ago, but scores of cases in the Police Courts show that the retail trade thrives, though to a diminished extent, in Bombay. High profits ensure the continuance of the trade.

The Law in regard to Cocaine. - This varies Act. Since that date the illegal sale of cocaine in India has largely increased and the various provincial Excise Reports bear witness to the spread of the "Cocaine habit." The consumers of the drug, which is notoriously harmful, are of the drug, which is notoriously harmful, are oven school children are reported to be its victims; but in India as in Paris the drug is mostly used by prostitutes or by men as any phrodisiac; The habit has spread chiefly to those classes which are prohibited by religion or caste rules from partaking of liquor and the well-known Indian intoxicating drugs.

Smuggling.—So far as the cases already well-known Indian intoxicating drugs.

Smuggling.—So far as the cases already etc., under Act V of 1878 as amended by Act detected show, the persons who smuggle the India, into India, are chiefly sallors, stewards, firemen and sometimes engineers and officers of foreign ships. The ports through which cocaine for a term which may extend to Rs. 2,000 or both and firemen and sometimes engineers are Delhi, Madras, Marmagoa and Pondicherry. The main inland distributing centres are Delhi, Lucknow, Meerut, Lahore, Mooltan, Surat and Ahmedabad. Delhi especially is notorious offences. The new Act also contains a for the cocaine trade. Great ingenuity is employed in smuggling cocaine through the customs houses. It is packed in parcels of sellers. imported except by a licensed dealer and im-

# The Opium Trade.

noxious drug on earth. Refer to the League of non-China exports down to it in 1911. In Nations' proceedings in regard to opium and subsequent years, she progressively reduced the again, mainly under the leadership of American permissible export limit and in 1913 she stopped representatives, one finds India and the Governet exports to China altogether. ment of India held up to humanity as traffickers in opium and as thereby obstacles to making the world a better place to live in. In fact, neither India nor the Government of India has anything to be ashamed of in its opium history Whatever may be the case in other countries, centuries of inherited experience have taught the people of India discretion in the use of the drug and its misuse is a negligible feature in Indian life. Abuse of its properties is rarer in India than the abuse of alcohol in Western countries. So much for the internal position.

The record as regards exports is equally clean. India has never driven hard bargains to secure the sale of the product overseas. it has been bought the reason is its superiority over other supplies, because of the stringent regulations by which its manufacture has always. under the British authorities, been regulated in India, in order to secure the purity and cleanliness of the finished product. Directly any importing country has expressed a desire to have the trade reduced, the Government of India have responded by stiffening their restrictions on export. There have, in recent years, mainly at the instance of America, been numerous International conferences with a view to making opium and drugs derived from it more difficult to obtain and in every case it has been found that India had already given the lead in the special regulations which it was proposed to

The China Trade.—The classic case of Indian restriction of her export opium trade is provided by China. There is a long history of Indo-Chinese negotiations on the subject, but it is unnecessary to go further back into these than 1911. On 8th May of that year, there was drawn up between India and China an agreement under which the Government of India assented to · (1) the payment of an import duty three times the existing amount in return for the promised abolition of provincial taxes; (2) the partial closure of China to Indian opium by provinces, including not only stoppage of transit passes, but also treaty port closure. Shanghai and Canton excepted; (3) the total extinction of trade before 1917 on proof of total cessation of opium production in China; and (4) revision of the agreement on due notice by either party. This agreement, as its terms indicate, was on the side of China the outcome of a professed desire consumption in her midst. And on her side China, in the agreement, undertook, among other things, to reduce production in China pari passu with the reduction of exports from India. to stamp out the opium trade and opium

In addition to the limit to the China trade imposed by the agreement, the Government of India undertook in order to lessen the danger

Mention opium and half the Western world to the legitimate demands of the non-China directs its thought to India, as though India markets. A figure was elaborately calculated were a most unscrupulous producer of the most for these markets and India drastically cut her

exports to China altogether.

The financial sacrifice thereby undertaken by India in order to help the Chinese in their professed desire for reform amounted to many millions sterling a year. China never carried out her side of the bargain She is still demonstrably the greatest opium producing country in the world and the only effect of the reduction, and eventual abolition, of imports from India is better trade for Chinese opium producers and merchants and largely increased imports of opium into China from Persia and Turkey.

Agreements observed by India.—The Government of India have carried out to the letter their side of the 1911 agreement. They have gone further. Not only were exports to China stopped and exports to non-China countries in the East limited in accordance with the agreement with China, but exports to non-China countries have, on the voluntary initia-tive of India, been subjected to successive restraining agreements with the countries concerned. The Government of India introduced, with effect from 1st January 1923, a certificate system recommended by the League of Nations, whereby all exports of opium must be covered by certificates from the Government of the importing country that its consignment is approved and is required for legitimate purposes. The pressure exerted by the League of Nations in this regard was not pressure upon the Government of India but upon the Governments of the importing countries and, so far as India was concerned, the new system was welcomed because it removed from the shoulders of the Government of India all responsibility in regard to opium consumption in the importing countries and laid it upon their own respective Governments. In 1926, in order to fulfil the spirit of her international agreements, India decided, though she was in no way bound by then letter to do so, to reduce her exports to Far Eastern countries for other than inedical and scientific purposes by 10 per cent vearly, so as to extinguish them altogether by December 1935, and effect has been given to that policy at considerable financial sacrifice. India is the only country that has made any considerable sacrifices of the kind.

International Aspect of the Problem .-It was only during the processes and negotiations by which the Indian opium export trade to China was being suppressed that the Opium question began to assume a widely international aspect. This happened on the initiative of the U.S.A., at whose instance an International Opium Commission met at Shanghai in 1909 and formulated a series of recommendations for the suppression of opium sinoking and the regulation of the use of opium and morphia. The United States thereafter advanced a further of India undertook in order to lessen the danger proposal for an International Conference at of snuggling into China, and as an earnest of the Hague. This met on 1st December 1911, their desire to assist that country, strictly to and finally drew up a convention on the subject, confine the remainder of Indian opium export) the terms of this document presented no new

ideas to the Government of India. Their provisions India had long observed. As regards morphia and cocaine, with which the Hague Conference concerned itself, the uses of these drugs in India had long been subject to exceedingly strict regulations. But these two drugs, the use of which for other than medical purposes the use of which for other than medical purposes invariably takes the form of dangerous vice, were becoming a menace to the world. They were not included within the scope of the proposals submitted by the U.S.A. for the consideration of the Conference. It was mainly owing to pressure by the Government of India that they were included within the terms finally signed and the rigid and universal application signed and the rigid and universal application of the articles of the Convention which apply to them would rid the world of the drug evil.

As regards prepared oplum, that is to say smoking oplum, India does not and never has exported it and the sale of it in India is prohibited. No oplum is exported from India to the United States of United States of America. None has been exported to Great Britain by private merchants since 1916. Exports to Great Britain are strictly limited to medicinal requirements and go officially from the Government of India to the British Government. Nor is Indian opium exported

to any other country in Europe.

Indian Uses of Opium.—There is a fundamental difference between the problem in India and that in foreign countries, particularly in America and Europe, America and Europe are principally concerned with the problem of the vicious consumption of cocaine and morphia and it is on the experience of the abuse of these drugs in those countries that much of the condemnation of Indian policy is based. It is accepted that the consumption of opium in America and Europe is in effect hardly less disastrous than that of morphia and cocaine. And the reason is that to Americans and Europeans opium is an unaccustomed drug. habit of its use being both new and strange to them, it is never used to moderation but always abused, and the results have no relation to the result of moderate column eating in India. The fact appears to be that peoples acquire a tolerance to drugs to the use of which they are long habituated. Opum has been used in India since the 16th century at least. The method of use is eating and in India, generally speaking, eating seems to do little, if any, harm. Smoking, which is the habit of the Far Eastern races, rather than of the Indian races, seems to do much more harm in India than eating, while on the other hand where smoking is in ordinary use competent authorities (e. g., the Royal Commission on opium in Malaya) think eating to be more harmful than smoking.

The Government of India have fully partici-

pated in the different International Conferences on the drug question and responded to the obligations which her assent to their conclusions has placed upon her in regard to home consumntion. But the principal effect upon India of these International discussions has been to draw the fresh attention of her Government and people to the opium situation in her midst, to cause consultations on the subject between the Government of India and the Indian Legislature and to produce what may be described as considerable intelligent progress in the development of those regulations upon the use of opium which are time-honoured.

The Commission of 1893.—Despite all this, the principles of Indian internal opium policy essentially remain, subject to certain changes of scientific opinion in regard to medicinal uses, those laid down by a Royal Commission which was appointed by His Majesty's Government, mainly as a result of the activities of the Society for the Suppression of the Opium Trade, in 1893, to inquire into all the circumstances connected with the production and sale of Indian opium. The Society which was largely instrumental in bringing about the institution of the inquiry, recorded its opinion that the appointment of the Commission constituted "the ment of the Commission constituted "the greatest and most solid forward step that the movement for the suppression of the opium trade has yet made" and considered that the Royal Commission was "as fair-minded and impartial a tribunal as the Society could have desired to hear its case." The results of the appuir were publicated to 1855 and enquiry were published in 1895 in seven volumes.

The Royal Commissioners examined with the greatest care the problem of opium consumption in India and in brief they found that it was not only subject to careful regulation but was governed by longstanding and admirable disci-plinary habits among the people. Excessive use, they found, was exceptional, and condemned by public opinion. As regards the legal restriction of its use to medical needs, they advised that Government could do no more than limit the extent of cultivation and hold a monopoly of manufacture and wholesale supply and that to draw a line in popular opinion between medical uses and those not strictly so describable would be impracticable. They agreed that the mass of Indian opinion was opposed to prohibition as an unnecessary restriction on individual liberty and interference with established customs and habits. Apart from the religious question they found Indians generally to consider the use of alcohol to be more objectionable, more injurious and more disgraceful.

The Government of Lord Hardinge, in a Despatch to His Majesty's Government in 1911, and that of Lord Reading, in a despatch dated 24th March, 1921, both in the same words took their stand on the conclusion of the Royal Commission "that the opium habit as a vice scarcely exists in India, that opium is exten-sively used for non-medical and quasi-medical purposes, in some cases with benefit and for the most part without injurious consequences, that the non-medical uses are so interwoven with the medical uses that it would not be practicable to draw a distinction between them in the distribution and sale of the drug and that it is not necessary that the growth of the poppy and the manufacture and sale of oplum in British India should be prohibited except for medical pur-poses." The despatch of Lord Hardinge's Govern-ment was approvingly quoted by Lord Reading's Government a few years ago. It has long been recognised that any attempt to eradicate by law the use of oplum would be open to all the objections involved in bureaucratic interference with popular custom. Eating it is largely quasi-medical; it is used for the prevention, cure and alleviation of disease, as a prophylactic as an anodyne and as the commonest and most treasured household medicine of the people, to whom qualified medical assistance is inaccessible. It is also taken as a solace, as a tonic and as a

Present Policy.-The current attitude and policy of the Government of India were lately explained in their behalf to the League of Nations at Geneva. Their representative declared that any genuine measure of reform initiated by a Provincial Minister in connection with it would receive encouragement and support from the Central Government and showed that the policy of that Government is. and has been, one of non-interference with the and has been one of holding therefore with the moderate use of raw opium, whether the object of the consumer be some real or supposed physi-cal benefit or merely the indulgence of the almost universal desire of human beingr, particularly those whose occupations involve exposure or severe bodily exertion, for a stimulant or narcotic. Excessive indulgence it is and always has been the desire of Government to express.

Opium is under the current Indian constitution a Provincial Transferred Subject. Nevertheless, owing to the jealous watching and criticism by observers in every continent, the Government of India called an official All-India Conference, which was opened at Simla by Lord Irwin, on 5th May 1930, to consider the question of certain areas where opium consumption was alleged to be unduly high. This follow tion was alleged to be unduly high. This followed on the prosecution of special provincial inquiries by committees set up by the Local Governments at the special instance of His Majesty's Government. The Conference, after an exhaustive discussion of the phenomena presented by the various areas selected for investigation, and in the light of the personal knowledge of the representatives of the different Provinces and of the representatives of the different Rhowledge of the representatives of the local commit-tees, concluded that it appeared that certain parts of Assam and Calcutta might correctly be regarded as having excessive consumption and that Orissa and the Ferozepore District and that Orises and the rerozepore District of the Punjab might be held to provide cases for further inquiry. In other cases the Confer-ence considered that there was no evidence of prevalent excess. But they gave a series of examples to show that there were simple explanations showing harmless causes for what appear-

ed to be excessive consumption in many places.
While speaking at the Second Geneva Opium
Conference on 19th January 1925, Lord Cecil taken from a report made by the United States
Treasury, to the effect that consumption was greater in America than in India. The estimate framed by the Advisory Committee of the League of the annual requirements of opium League of the annual requirements of optim for strictly medicinal and scientific purposes is 600 milligrammes or 9.25 grains per capital which is roughly equivalent to 6 Indian seers per 10,000. The Health Committee of the League opined that this could be reduced to League opined that this could be reduced to 450 milligrammes, or 6.94 grains in countries possessing a well developed medical service. The consumption per capita in British India during 1924-25 worked out at 17.2 grains per head. The rate of consumption has certainly fallen since the compilation of this published figure. The amount includes veterinary uses and these are extensive, though to secure statistics of the quantity of opium given to animals is impossible. Allowance also has to be made for the poor morphine con- chistan, Ajmer-Merwara and Delhi.

restorative to lessen or avert fatigue and in other tent of Indian opium, which is about 9 per cent, ways in which, when moderately used, it is at 90 deg. consistence, and the limited number relatively innocuous. to administer strictly measured doses. Lord Cecil's statement at the League of Nations was received with extreme criticism by Mr. Porter of the American delegation. Mr. Porter said the American statistics cited had been disavowed une american statistics cited had been disavowed and that Lord Cecil's observations were a "vile slander upon the people of the United States." Lord Cecil apologised and withdrew his statement. But Mr. Frederick Wallis, Commissioner of Correction, New York, writing in the Current History Magazine for February, 1925, showed the annual per capita consumption in Italy to be one grain, in Germany 2 grains, in England 3 grains, in France 4 grains and in the United be one grain, in Germany 2 grains, in England 3 grains, in France 4 grains and in the United States 36 grains. In "Current History" for March, 1925, Mr. Wallis defended this last figure and said that in view of the smuggling into the United States "it would appear to me that the consumption would be much larger than the Government officially gave as 36 grains."
It appears now to be recognised by all sane opinion throughout the world that India has the cleanest sheet if any in regard to opium control and export. Even the former ill informed sentimental attacks upon the Government in these respects have almost stopped.

Opium policy has on several occasions during the past few years come under discussion in the Central Indian Legislature and in regard to Central Indian Legislature and in regard to it the Government of India and the non-official members of the Legislature have been in accord. Cultivation of the poppy in British India is confined, except for a few wild and inaccessible regions, to the area that supplies the Government of India Factory at Ghazipur in the United Provinces where it can only be cultivated under Heense. Importation into British from the Indian States is controlled by British from the Indian States is controlled by prohibition of imports except on Government account and by agreement with the States concerned that they will not allow exports to British India except by arrangement. Cultivation in British India is progressively and rapidly being reduced. The sown area in British India which produced the crop of 1931-32 was 37,012 acres i.e. 26.3 per cent of the area in 1922-23 acres, i.e., 26.3 per cent of the area in 1922-23, and 20 per cent of that in 1912-13. The process of reduction was stayed in 1931-1932 because it was found that the rate before 1931 had been too rapid so that stocks were brought to a dangerously low level. Progressive and rapid reduction was resumed in 1933. The con-sumption of optim in the different provinces in India in 1932 is approximately as follows:-

						lbs.

### GLASS AND GLASSWARE.

The total value of the imports of glass and present. The existing Factories mostly stop at Almost all the important descriptions under this head recorded decreases Japan still retained the foremost position although the value of her exports shrank to Rs. 57 lakhs from Rs. 65 lakhs in 1932-33.

Manufacture of Glass in India.—Glass was manufactured in India centuries before was manuactured in India centuries before Christ and Pinny makes mention of "Indian Glass" as being of superior quality. As a result of recent archaeological explorations, a number of small crude glass vessels have been discovered indicative of the very primitive stage of the Industry. But no further traces of aminus Ladian (1987). of ancient Indian Glass Industry as such survive; yet, it is certain that by the sixteenth century it was an established Industry producing mainly bangles and small bottles. The quality of the material was inferior and the articles turned out were rough. Beyond this stage the industry had not progressed until the nineties of the last century. Manufacture of glass in India on modern European lines dates from the nineties of the last century, when some pioneer efforts were made in this line. Since then a number of concerns have been They started, a number of them have failed, mainly devote themselves to the manufacture of bangles and lampware side by side with bottle-making on a small scale. This, therefore, is the criterion which determines the two welldefined classes of the industry in its present stage, (i) indigenous Cottage Industry and (ii) the modern Factory Industry.

(i) The indigenous Cottage Industry which is represented in all parts of the country, but has its chief centres in Firozabad District of U. P., and Belgaum District, in the South, is mainly concerned with the manufacture of cheap bangles made from "glass cakes or blocks" made in larger Factories. The industry is at present in a flourishing state and supplies nearly one-third of the Indian demand for bangles The quality has been improved by the discovery of new glazing processes and for the present the turnover in this line has gone up to 20 lakhs of rupees a year. But these bangles have now to face a very hard competition from Japan whose "silky" bangles are ousting the old type Indian ones.

glassware amounted to Rs. 122 lakhs in 1933-34 producing glass cakes for bangles as in Prozabad as compared with Rs. 1,42 lakhs in 1932-33 or simple kind of lampwares and bottles. or simple kind of lampwares and bottles. There is one factory in the United Provinces which since 1929 has been manufacturing which since 1929 has been manufacturing sheet glass. Artistic glassware is out of the question and the private capitalists who have to run their concerns mostly with commercial ends do not think it worth their while to spend money and labour on it. War caused a great decrease in volume—though not so much in value which was much increased-of the imports of the lampware, etc., and in order to meet the Indian demand for them, new Factories were started and old revived, which produced only cheap and simple kind of lampware and bottles on small scale. The total production of these Indian Glass Works has not been exactly estimated, but it is generally supposed that they were able to meet in these war years nearly half the Indian demand for this kind of glassware. There are a number of Factories engaged in the production of lampware, of which two or three only produce bottle and carboys also. The chief centres for the former kind are Bombay, Jubbulpore, Allahabad, and Bijhoi and Ambala; while bottles are only manufactured at Naini and Lahore, and recently at Calcutta.

During the later years of the war period, a number of Glass Works were opened in the Bombay Presidency and adjoining districts, local manufacture having been stimulated by the cessation of imports of German, Austrian and Belgian glass.

Causes of failure .- Records of the earlier ventures have shown that the failures in some cases were due in part at least to preventible causes, prominent among which were (1) Lack of enlightened management. (2) Lack of proper commercial basis, as in some cases the proprietors had a number of other more larger concerns to look to. (3) Bad selection of site. An ideal site for a Glass Factory would be determined by the (a) nearness of quartz and fire-clay, (b) nearness of fuel, and (c) by the nearness of market. At least two must be present. In some concerns, two were absent. (4) Specialisation was lacking, some factories in their initial stages trying to manufacture three or four different kinds of glassware simultaneously like lamp-ware, bottles, and bangles, etc. (5) Paucity of sufficient fluid capital for initial expenses for Indian ones.

(ii) The modern Factory type of organization some cases for running the concern in the of this Industry is just in its infancy at beginning.

But beyond these there are certain real and special causes that contributed to the failure of some of these and hinder the progress of the rest. Chief among them are (1) The Industry is in its infant stage and hence such fallures are but incidental. (2) No expert guidance in this line, there is a lack of nen and good literature.
(3) Paucity of skilled labour of higher type.

(3) Paucity of skilled labour or migner type.

The present Indian workmen in this line and blowers are few in number and illiterate. They, therefore, master the situation and are unamendable to management. (4) Heavy cost of good fuel, the works usually being situated where good sand and quartz can be obtained, and consequently, in most cases, at slon Report (Appendix); Indian Munitions a great distance from the coal-fields. (5) To Board, Industrial Handbook, etc. "Notes on a certain extent, competition from Japan and Glass Manufacture." By C. S. Fox. (Bulletin No. European countries.

The Indian Industrial Commission say in their Report (Appendix E)., viz.: "The Giass Industry, even in its simplest form is highly technical and can be efficiently carried on only by scientifically trained managers and expert workmen. The present stage has been reached by importing men, only partially equipped with the necessary qualifications, from Europe and Japan, and by sending Indian students abroad to pick up what knowledge they can. The glass industry is a closed trade and its secrets are carefully guarded, so that the latter method has not proved conspicuously successful.

Bibliography-Indian Industries Commis-29 of Indian Industries and Labour, 1922.)

### HIDES, SKINS AND LEATHER.

India's local manufactures of skins and leather have steadily increased in recent years. Previous to the outbreak of war, the trade in raw hides in this country was good; there was a large demand for hides, and prices ruled high On the declaration of war, the trade which had up till then been brisk was seriously dislocated. Exports to enemy countries especially to the great emporium of Indian hides, Hamburg, were stopped, and exporters had to find new markets for the raw material. The raw hide business of India had up to that time hide business of india had up to that time been largely, if not quite entirely, in the hands of German firms or firms of German origin and Germany had the largest share of India's raw hides. In the four months before the outbreak of war she took 39 per cent. of the total exports. In 1912-13 she took 32 per cent. and in 1913-14, 35 per cent. Germany still takes the major share of India's raw hides while America takes the bulk India's raw hides while America takes the bulk of goat skin exports. Shipments of tanned hides go mostly to Great Britain.

The exports of hides and skins, tanned of

dressed, amounted to 19,700 tons valued at Rs. 565 lakhs as compared with 14,500 tons valued at Rs. 466 lakhs in 1932-33.

Conditions of the Trade.—The trade in hides and skins and the craft in leather manufacture are in the hands either of Mahomedans or of low caste Hindus, and are on that account participated in by a comparatively small community. The traffic is subject to considerable fluctuations concomitant with the vicissitudes of the seasons. In famine years for instance the exports of untanned hides rise to an abnormal figure. The traffic is also peculiarly affected by the difficulty of obtaining capital and by the religious objection which assigns it to a position of degradation and neglect : it has thus become a monopoly within a restricted community and suffers from the loss of competition and popular interest and favour.
Uses of Indian Hides.—The fifteenth report

of the Imperial Economic Committee states that Indian hides, both raw and partially tanned, are largely used for the upper leather of boots; partially tanned skins are used for fancy leather articles, bookbinding and for covering the small rollers used in cotton mills for drawing the thread. Raw sheepskins are used for similar

articles and also for gloves. They are exported mostly to Germany, France and Italy. Raw goatskins are used almost entirely in the manufacture of glace kid, of which commodity the United States is the chief producer.

The chief markets for Indian raw hides are in Central and Southern Europe, Hamburg being an important distributing centre. Directly after the war an effort was made to direct more of this trade to the United Kingdom, but it has drifted back to Germany. The assortment and grading of raw hides exported from Calcutta before the war, largely the result of the work of German firms established there, had reached a high standard. After the war the trade became somewhat disorganised from a variety of causes, among which may be cited fiscal changes, the entry into the trade of new and at first inex-perienced firms, the increased cost of arranging for supervision at up-country points. It has, however, been recovering its reputation.

Protecting the Industry.—The report of the Industrial Commission pointed out that the principal difficulty at present in the hides and leather industry was the lack of organisa-tion and expert skill. Government action to foster the industry was first taken in September 1919, when a Bill was introduced in the Imperial Legislative Council further to amend the Indian Tariff Act, 1894. The effect of this Bill was officially described as follows: "It is to impose an export duty of 15 per cent, on hides and skins with a rebate of 10 per cent. on hides and skins exported to other parts of the Empire, and there tanned. Its object is to ensure that our hides and skins shall be converted into fully tanned leather or articles of leather so far as possible in India and failing this in other parts of the Empire, instead of being exported in a raw state for manufacture in foreign countries. Sir George Barnes who was in charge of the Bill and described the tanning industry as one of the most promising Indian industries ex-plained that " the present position is that we have in India at the present time some hundreds of tanneries for the tanning of hides, a large number of which have come into existence in order to satisfy military requirements during the war. We have in fact the foundations of a flourishing tanning industry, but there is reason to fear that it may tend to dwindle and disappear

with the diminution of military requirements, if some other support is not given. We want to keep this industry alive, and we believe that in this case protection in the shape of a 15 per cent. export duty is justifiable and ought to be effective. It is clearly just also that the same measure of protection should be extended same measure of protection should be extended to the tanners of skins whose business, as I have already stated, was injured by the necestities of the war. Though Indian tanneries have enormously increased in number during the past three years, they can only deal with a comparatively small proportion of the raw hides and skins which India produces, and it is hides and skins which India produces, and it is to the advantage of India and the security of the Empire generally that this large surplus and skins are extensively cured and tanned should, so far as possible, be tanned within the latter worked up in response to an Empire, and with this end in view the Billing in the protection of excellent tanning materials such as Acacia pods and bark, Indian sumach, the Tanner's cassia, Mangroves, and Myrathus and skins are extensively cured and tanned and the leather worked up in response to an Empire, and with this end in view the Billing in the past three products.—India possesses a large selection of excellent tanning materials such as Acacia pods and bark, Indian sumach, the Tanner's cassia, Mangroves, and Myrathus and skins are extensively cured and tanned and the leather worked up in response to an Empire, and with this end in view the Billing in the past three years, they can only deal with a comparatively small proportion of the raw below the Tanner's cassia, Mangroves, and Myrathus the Tanner's cassia, Mangroves, and the Tanner's cassia, Mangroves, and the Tanner's cassia, Mangroves, and the Tanner's cassia, Mangroves, and the Tanner's cassia, Mangroves, and the Tanner's cassia, Mangroves, and the Tanner's cassia, Mangroves, and the Tanner's cassia, Mangroves, and the Tanner's cassia, Mangroves, and the Tanner's cassia, Mangroves, and the Tanner's cassia, Mangroves, and the Tanner's cassia, Mangroves, and the Tanner's cassia, Mangroves, and the Tanner's cassia, Mangroves, and the Tanner's cassia, Mangroves, and the Tanner's cassia, Mangroves, and the Tanner's cassia, Mangroves, and the Tanner's cassia, Mangroves

proposes a 10 per cent. rebate in respect of hides and skins exported to any place within the Empire. I should add that it is proposed to limit by notification the benefit of this rebate to hides and skins actually tanned within the Empire, and Indian hides and skins re-exported from an Empire port for the purpose of being tanned abroad will not be entitled to any rebate."

### INDIAN INVENTIONS AND DESIGNS.

While India will have to depend for some time to come on foreign manufacturers for her closely follow that in the United Kingdom for supply of textile machinery, power plants of the industrial requirements, Indian engineers and chemical experts will have ample of major interest. One main difference exists, the protection of inventions and the registration of designs, as they always have done in matters opportunity to exercise their inventive skill in various other directions. These may include agricultural implements, domestic appliances, trying and moistening apparatus, laboursaving devices, small manufactures in hardware, pumps, water lifts, furniture and motal wares, construction of small manufactures and motal wares, construction of small manufactures and motal wares, construction of small manufactures in hardwares, construction of small manufactures and motal wares, construction of small manufactures and motal wares, construction of small manufactures in hardwares, construction of small manufactures and motal wares, construction of small manufactures and motal wares. wares, construction of roads and permanent ways, railway signalling and controlling, railway vehicles, buildings and structures, valves and cocks, lattines, closets and sanitary appliances. cocks, latrines, closets and sanitary appliances. There will also be new chemical processes an apparatus including the manufacture of vegetable products, foodstuffs, treatment of oil seeds, the use of by-products and waste materials, use of starchy raw materials for the sizing of yarn and cloth, tallow substitutes, manufacture of caustic soda, soda ash, bleaching powder and chlorire and other chemical products for use in the various industries which the country will be engaged in developing in the country will be engaged in developing in the near future.

the near future.

A handbook to the Patent Office in India which is published by the Government Press, Delhi, gives the various Acts, rules, and instructions bearing on the subject together with hints for the preparation of specifications and drawings, hints for searchers and other valuable information that has not hitherto been readily accessible to the general public in so convenient a form. In the preface the Controller of Patents and Designs explains the scope of the Patent laws in India and Indicates wherein they differ from English law indicates wherein they differ from English law and procedure.

The existing Indian Patent Law is contained in the Indian Patents and Designs Act, 1911 as amended in 1930 and the Rules of

The first Indian Act for granting exclusive privileges to inventors was passed in 1856, after an agitation that had been carried on fitfully an agration that had been carried on strilly for some twenty years. Difficulties arising from an uncertainty as to the effect of the Royal Percogative prevented earlier action. and, owing to some informalities, the Act itself was repealed in the following year. In 1859 it was re-enacted with modifications, and in 1872 the Patterns and Designs Protection Act was passed. The protection of Inventions Act of 1883, dealing with exhibitions, followed, and then the Inventions and Designs Act of 1888. All these are now replaced by the present Act

The existing Acts extend to the whole of British India, including British Baluchistan and the Santhal Parganas. This of course includes Burma, but it does not embrace the Native States. Of the latter Hyderabad (Decoan), Mysore, Gwalior, Baroda, Travancore, Marwar, Cochin, Kashmir and Jamu have ordinances of their ewn, for which particulars must be obtained from the Government of the States in question as they are not administered by the Indian Patent Office in Calcutta. A patent granted in British India does not extend to the United Kingdom or to any other British Possession, but under the reciprocal arrangement an applicant for an Indian patent has 12 months priority in the United Kingdom, Australia, Canada, New Zealand, the Irish Free State, the Union of South Africa and Ceylon and vice versa. The object of the Act of 1911 was to provide a simpler more direct, and more effective. Act, 1911 as amended in 1930 and the Rules of an applicant for an Indian patent has 12 months 1933. The Patent Office does not deal with priority in the United Kingdom, Australia, trade marks or with copyright generally in Canada. New Zealand, the Irish Free State, books, pictures, music and other matters which fail under the Indian Copyright Act III of 1914. There is, in fact, no provision of law in British India for the registration of Trade Marks High are protected under the Merchandise which are protected under the Merchandise Marks Act, (IV of 1889) which forms Chapter XVIII of the Indian Penal Code, gave further protection both to the inventor by providing that his application should be kept secret until acceptance, and to the public, by increasing the facilities for opposition at an effective period. At the same time a Controller of Patents and Designs was established, with power to dispose of many matters previously referred to the Governor-General in Council, and provision was made for the grant of a sealed "patent" instead of for the mere recognition of an "exclusive privilege." The provisions of the Act follow with the necessary modifications those of the British inventions and Designs Act of 1907.

New Legislation.—Part I (Patents) of the Act of 1911 has been further amended by Act VII of 1930 and includes the following:—

- If an Application comprises more than one invention the additional inventions may be made the subject matter of additional applications bearing the same date as the original application.
- The term of the Patent will be 16 years instead of 14 years.
- Patent of Addition will be granted on the original patent without the payment of additional ronewal fees but the additional patent will expire with the date of the original patent.
  - Fresh provisions are made for the use of an invention by Government.
  - Government will grant licences to the public on application if the Patentee refuses to do so on reasonable terms.
  - Several other facilities are given under the Indian Amended Act of 1930 on the lines of the present British Patent Act.

The period of opposition to the grant of a patent has been extended to 4 months from the date of the notification of the "Acceptance" of the application, instead of 3 months. The provisions contained in the Indian Patents and Designs Rules, as regarded divisional applications in respect of inventions covered by the original application and divided therefrom, have been amplified and embodied in the Act tself. Section 10 has been amended to empower the Controller to decide disputes about proceeding with the applications for patents, that may occur between the applicants and third parties, or between joint applicants among themselves.

The time for appeal to the Governor-General in Council has been extended to 3 months, instead of 2 months from the date of the decision appealed against. A new Section 21A has been provided relating to secret patents. A new Section 35A has been provided for giving relief in suits for infringement of patents in respect of valid claim, despite the existence of invalid claims in the specification.

The definition has been altered as to the person entered on the Register as the grantee or proprietor of the patent. Section 78A (4) has been amended to enable British India to enter into reciprocal arrangement with the Indian States.

The definition of the term "Design" has been altered, and the time for applying to secure for the registration in India, the priority date of the application in the United Kingdom or other parts of the British Empire, has been extended to 6 months.

Printed Specification of applications for patents, which have been accepted (One Rupee per copy), may be seen free of charge, together with other publications of the Patent Office at the following places:—

# Insurance in India.

According to the report by Mr N. Mukauj Actuary to the Government of India, contained in the Indian Insurance Year Book, 1932, the number of companies subject to the provision of the Indian Iafe Assurance Companies Act of 1912 and the Indian Insurance Companies Act of 1928 at 282 of which 136 companies are constituted in India and 146 companies are constituted outside India. Of the 136 Indian companies, 60 are established in the Bombay Presidency, 25 in Bengal, 21 in the Madrias Presidency, 14 in the Punjab, 8 in Delit, 2 cach in the Central Provinces, Ajmei and Buima and 1 cach in Burma and the U P Of the 146 non-Indian companies 71 are constituted in the United Kingdom, 31 in the British Dominions and Colonics, 18 in the Continent of Burope, 12 in the United States of America, 9 in Japan and 5 in Jaya.

Most of the Indian companies carry on in number and of the remaining 33 Indian companies, 20 carry on life business along with other insurance business and 13 carry on insutance business other than life.

Besides the Indian life offices, there are some pension tinds, mostly connected with Government offices, which are exempt from the operation of the Act and the Indian Post Office Insurance Find is also exempt. As regards non-Indian companies, most of them early on neurance business other than life. Out of the total number of 146 non-Indian companies, 122 carry on misurance business other than life, 10 carry on life business along with other insurance business. Of the latter 24 companies, 16 are constituted in the United Kingdom, 6 in the British Dominions and Colonics and 1 each in Germany and Switzerland.

The total new life assurance business effected in India during 1931 amounted to 125,000 policies assuring a sum of nearly 266 cores and yielding a premium income of 13 crore, of which the new business done by Indian companies amounted to 97,000 policies assuring a sum of 17 crores and having a premium income of 5 crore. The share of the British companies in respect of new sums assured is 3½ crores, of the Dommion and Colomal companies about 6 crores and of the single German company 4 crore.

The average sum assured under the new policies issued by Indian companies is Rs 1.764 and under those issued by non-Indian companies Rs 3.400

The total life assurance business effected in India and remaining in force at the end of 1931 amounted to 714,000 policies assuring a total

sum of 168 crotes including reversionary bonus additions and having a premium income of very nearly 81 crotes Of this the share of Indian companies is represented by 502,000 policies assuming a sum of 94 crotes and having a premium income of 44 crotes.

Most of the Indian companies now transact life assurance business on the scientific principle but there are still some which carry on business on the **dividing plan** under which the sum assured is not fixed but depends on the division of a portion of each year's premium income amongst the claims arising in that year Government of India Actuary says in his latest annual report that the main defect of dividing insurance business is that policy-holders in each class are charged the same rate of premium of subscription mespective of their age on admission ranging even in some cases from 18 to 60 years. "Business of this nature is 18 to 60 years. "Business of this nature is not only unsound but is apt to lend itself to the practice of fraud on the part of policy-holders and agents and later on by the company. It has been declared to be the curse of insurance entripies in Judia." Before the Act of 1912 was passed there were nuncions companies which transacted lite assurance business on the dividing plan and most of them came to grief. Of such companies which were in existence at the time of the passing of the Act the majority have disappeared and some have stopped issuing policies on the dividing plan A few new companies have taken up this dividing insurance business and it will not be long before they realise their mistake.

Some Indian life offices have extended their operations outside India, mostly in British East Africa and in the Near East. The total new sums assured by these offices outside India in 1931 amounted to 66 lakin yielding a premium mecome of 4 lakin and the total sum assured inclinding reversionary bonus additions inforce at the end of 1931 amounted to 4 crores, having a premium; income of 214 lakins

The total new animity business effected during 1931 was for the animit of about 1 lakh per animin, which was equally shared by Indian and non-Indian companies. The total animity, business temaning in force at the end of the year was for the amount of 34 lakhs per anium, of which the amount payable by Indian companies was a little over 14 lakhs per animin.

The life asstraince business of Indian companies which steadily increased during 11 years up to 1929 received a setback in 1930 owing to the general inancial depression. The following table shows the new business effected since 1921 in each year and the total business remaining in force at the end of the year.

•	Yea	 r.		New business written during the year.	Total business remaining in force at the end of the year.
1921				5,47 lakhs.	34 croics.
1922				5,64 ,,	37 ,,
1923				5,85 ,,	39 ,,
1924	• •			6 20	40
1925				Q 15	42 "
1926	• • • • • • • • • • • • • • • • • • • •		::	10.95	47 ,, 53 ,,
1927	::		- 1	19 77	ev.
1928		••		15.41	71
1929	• •	••		17 90	00
1930	• •	• •		16.50	
1931	• •	• •		1770 ,,	89 98
1001	• •	• •		17,76 ,,	, 96

A large portion of the new business transacted by the younger and less firmly established companies lapsed within a short time and the growth of total business in their case is not commensurate with the volume of new business transacted in each year. The total business which lapsed during 1931 was 74 crores and was over 40 per cent. of the total new business.

The net income of the Indian companies under their life assurance business from premiums and interest amounted to 5½ crores in 1931 and was in excess of 4 crore over the corresponding income of the previous year.

Claims amounted to 1½ crore and exceeded the previous year's figure by 12 lakhs. Claims to business of the previous year's figure by 12 lakhs. Claims to business of the previous year's figure by 12 lakhs. Claims to business of the previous year's figure by 12 lakhs. Claims to business of the previous year's figure by 12 lakhs. Claims to business of the previous year's figure by 12 lakhs. Claims to business of the previous year's figure by 12 lakhs. Claims to business of the previous year's figure by 12 lakhs. Claims to business of the previous year's figure by 12 lakhs. Claims to business of the previous year's figure by 12 lakhs. Claims to business of the previous year.

claims by survivance an increase of 7 lakhs, respectively.

The life assurance funds increased by nearly 2 crores during 1931 and amounted to 22½ crores at the end of that year. The average rate of interest earned on the life funds during the year was a little less than 5 per cent.

The Post Office Insurance Fund was instituted by the Government of India in 1883 for the benefit of the postal employees but gradually admission to it has been thrown open to almost all classes of Government servants who are employed on civil duties. The following are some of the important particulars relating to the business of the Fund during the four years 1929 to 1932:—

		New busine during yes		in force	ess remaining at the end ne year.		Life
Ye endi 31: Marc	ng st	Number of policies.	Total sums assured.	Number of policies.	Total sums assured and bonuses.	Total income.	Assurance fund at the end of the year.

Fire, Marine and Miscellaneous Insurance Business.—The net Indian premium income of all companies under insurance business other than life assurance during 1931 was 2½ crores of which the Indian companies' share was 3 crore and that of the non-Indian companies 1½ crore. The total amount is composed of—

- 1,28 lakhs from fire.
  - 43 lakhs from marine, and
  - 77 lakhs from miscellaneous insurance business.

The Indian companies received-

28 lakhs from fire,

- 7 lakhs from marine, and
- 24 lakhs from miscellaneous insurance business.

The total assets of Indian companies amount to 29 erores of which stock exchange securities form the bulk. These securities are shown in the account at a net value of 20½ erores. Mortgage loans on policies and on stocks and shares are shown at 4 erores; land and house property are valued at 1½ erore; deposits, cash and stamps, are shown at ½ erore, accrued interest at ½ erore; agents balances and other outstanding items at 1½ erore; and loans on personal security and other miscellaneous assets at ½ erore. Investments of Indian companies outside India consist mainly of stock exchange securities and amount to ½ erore.

# Customs Tariff.

purposes and not for the protection of Indian Customs Officer on sufficient cause being shown in any case determines, provided further that purposes are on the recommendations of the Tariff Board, as accepted or amended by Government. Under the terms of the Ottawa Government. Under the terms of the Ottawa When any goods having been charged with Agreement a large range of British and Colonial goods received a preferential rate of duty from January 1, 1933. But the tariff has been modified with a view to admitting free or at favourable rates articles, the cheap import of which was considered necessary in the interests of the country. Thus certain raw materials, manures, agricultural implements and dairy appliances are admitted free. Machinery, printing materials, etc., are assessed at 10 per cent. and iron and steel railway material and ships at 15% Der Cent.

Re-Imports.—Articles of foreign produc-tion on which import duty has been once paid, if subsequently exported, are on re-import exempted from duty on the following conditions:

The Collector of Customs must be satisfied-

(1) of the identity of the articles;

(2) that no drawback of duty was paid on their export :

(3) that the ownership has not changed between the time of re-export and subsequent re-import;

(4) that they are private personal property re-imported for personal use, not mer-

an export certificate giving the necessary par-ticulars should be obtained from the Customs Department at the time of shipment of the articles which should be tendered for examin-

This concession of free entry on re-importation is not extended for the benefit of Companies or Corporate Bodies.

Drawbacks.—When any goods, capable of being easily identified which have been imported by sea into any Customs port from any foreign port, and upon which duties of Customs have been paid on importation, are re-exported by sea from such Customs port to any foreign port, or as provisions or stores for use on board a ship proceeding to a foreign port, seven-eighths of such duties shall, except as otherwise hereinafter provided, be repaid as drawback:

Provided that, in every such case, the goods be identified to the satisfaction of the Customs Collector at such Customs port and that the re-export be made within two years from the date of importation, as shown by the records of the Custom House, or within such extended

General import duties are levied for fiscal term as the Chief Customs Authority, or Chief

When any goods, having been charged with Import duty at one Customs port and thence exported to another, are re-exported by sea as aforesaid, drawback shall be allowed on such goods as if they had been so re-exported from the former port :

Provided that, in every such case, the goods be identified to the satisfaction of the Officerin-Charge of the Custom House at the port of final exportation, and that such final exportation be made within three years from the date on which they were first imported into British

No drawback shall be allowed unless the claim to receive such drawback be made and established at the time of re-export.

No such payment of drawback shall be made until the vessel carrying the goods has put out to sea, or unless payment be demanded within six months from the date of entry for ship-

Every person, or his duly authorised agent, claiming drawback on any goods duly exported, shall make and subscribe a declaration that passed since they were re-exported.

Duty is, however, charged on the cost of alterations, additions, renovations and repairs, involving the substitution of new parts, done to the articles while abroad, which should be declared by the person re-importing the articles in a form which will be supplied to him at the time of re-importation.

To facilitate identification or a substitution of respective forms of the articles in a form which will be supplied to him at the time of re-importation.

To facilitate identification or a substitution of respective forms of the articles of the articles in a form which will be supplied to him at the time of re-importation.

To facilitate identification or a substitution of the articles of th

Kingdom, would do well to make themselves acquainted with the law and regulations relat-ing to merchandise marks. In Appendix II will be found the principal provisions of the Indian Merchandise Marks Act, 1889, and connected Acts and the notifications issued there-under. The following summary of the regulations in force does not claim to be exhaustive. For those seeking more complete information a reference is suggested to the Merchandise Marks Manual which is published under the authority of the Government of India and obtainable of all agents for the sale of Indian Government publications.

Infringements or offences may be classified conveniently under four heads :-

- 1. Counterfeit trade marks:
- 2. Trade descriptions that are false in respect of the country of origin;
- Trade descriptions that are false in other respects; and
- Lengths not properly stamped on piecegoods,

764 NOTE 1.—In the expression "advatoron" used in these schedules the reference us to "real value" as defined in Section 30 of the Sea (ustoms Act 15.7% (VIII of 1878) unless an atticle has a fariff value assigned to ut.

NOTE 2.—Taiff-valued heads are based on the ordinary trade description of each article and cover all reduced grades and maxtures unless they are separately provided for spression. Standard rate of duty "means in the case of article-lable to preferential rates of duty the standard rate of duty as opposed to the preferential rate of duty when articles the ordinary rate of duty the standard rate and in the case of ordinary rate of duty.

### Finance.

The gradual evolution of the present financial organisation of India is in many respects a reflection of her constitutional development. Those who take a broad view of the history of Federal States-and by whatever name it may be called India must in its political struc-ture be a Federal State—nothing is more impressive than the cbb and flow in what may be called the adjustment of Federal and State rights. There is a constant mutation in the powers of the central government and the federal components, though in India we use the terms "Government of India" and "Provincial Governments" to describe them. In the earliest days of British rule, the Provinces, and especially the older Presidencies, were for all practical purposes independent of the central government and responsible only to the authority sitting in London. After the middle of the nuncteenth century the process was reversed, and the Government of India was allpowerful, controlling the Provinces down to the smallest items of their expenditure. This centralisation reached its highest point during the long Vicerovalty of Lord Curzon, who was so lealons of his supreme authority that he sought to deprive the Presidency Governors of their right to correspond direct with the Secretary of State for India. This system was found top-heavy in the days of his successors, and a continuous process of devolution set in In the matter of finance the measures took the form of long-term "contracts" with the Provincial Governments, and later in the assignment of definite heads of revenue to the Provincial Governments, thus removing the dual authority and responsibility which had elogged progress A much clearer cut was made when the great reform scheme embodied in the Government of India Act of 1919 was passed Here, for all practical reasons, Provincial finance was entirely separated from the finances of the Government of India, and with one reservation the Local Governments were made masters in their own financial houses
The reservation mose from the circumstance
that the funds of the Government of India did not then permit them to do entirely without contributions from the Provinces. These contributions were fixed in the shape of definite sums, which the Provincial Governments had to find from their own resources and pay to the Government of India in cash. They varied between Province and Province, on a scale which at first sight seemed inequitable, but which had a definite logical basis. The total of these contributions was a little less than ten or these controllions was a little less than ten-crores of rupees. This was admittedly a tem-porary expedient, to last only so long as was necessary for the Government of India to reduce its post-war expenditure and develop its revenues to the point when they would balance without drawing from the Provinces. They were was no possibility of adjusting these differences,

But this did not end the discussion indeed it was only the first phase. A large issue remains, and despite the extinction of the Provincial contributions the finances of some of the Provinces are in an unsatisfactory state. Broadly the issue may be put in this way. The Government of India has taken the growing heads of revenue those which issue from taxes on income and customs. The Provinces are left with resources which are either almost static, like land revenue, or which are actually declining, as with excise where steps are being taken to reduce the consumption of alcoholic liquor in response to the strong Indian sentiment towards prohibition. At the same time the Provinces are confronted with the great growing sources of expenditure, like those on education and sanitation which bulk largely in Provincial budgets. The burden is heaviest in the industrial provinces, such as Bombay and Bengal. The standard of living is high; wages and costs are a good deal above those of the agricultural provinces. This means an expensive administration. On the other hand the industrial progress which induces this costlier administration pours all its taxable product into the coffers of the Government of India. Rules made to give Bombay and Bengal some share in the Income Tax receipts have been inoperative in practice. Whilst therefore relief is felt at the abolition of the Provincial Contributions under the 1919 settlement, it is felt that thus does not go far enough, and there is still this pressure for some share in the revenues from the taxes on income which, it is believed, alone can put the industrial Provinces on a satisfactory basis.

### A Review.

The financial organisation was, of course, reviewed as part of the work of the Round Table Conference. A sub-committee of the Federal Structure Committee was appointed under the chairmanship of Lord Peel to examine the question of federal finance and the principles embodied in the sub-committee's report were endorsed by the parent Committee as a suitable basis. A Federal Finance Committee with Lord Eustace Percy as Chairman was appointed at the end of 1931 to subject to the test of figures, the suggested classification of revenues by the Peel Committee and to estimate the probable financial position of the Federal and of the Provincial Governments under the proposed scheme. In the course of their report the Federal Finance Committee said that the transfer to the Provinces of taxes on income though defensible in principle would leave the Centre in deficit. Therefore the Peel Committee suggested a method of transferring to each Province a percentage of the share of income tax estimated to be attributable to it. But in view of the incomplete data on which the estimates were made a special review is said an open sore, each Province claiming that it paid to be necessary at the line federation is estab-an undue proportion of the total contribution, lished in order to fix the initial percentages, and that it was starved in consequence. There A strict allocation on a percentage basis would still leave some Provinces in deficit and so as the contributions were reduced as fast as to right their finances the committee suggested the finances of the Government of India spreading the charge over the other Provinces permitted. They finally disappeared from the by giving them back less in income tax than budget in 1928-29. Regarding possible new sources of revenue, Federal or Provincial, the Federal Finance Committee reported as follows:—

### Federal.

Excise on Tobacco.—The present position regard to this tax appears to be that a substantial revenue may be expected from a system of vend licenses and fees, but that an excise duty imposed in the near future could not be relied on to yield a substantial revenue. There is general agreement that such a duty could not be imposed on the cultivator, and it is doubtful whether a duty on the manufactured product could be successful while manufactured containes to be so largely carried on in small establishments and even as a domestic industry. Vend heenses and fees can obviously be imposed only by the Governments of the Units, and their imposition by the Provincial Governments is now being encouraged by the Government of India The difficulties in the way of a iederal excise may be overcome in course of time, but it would be unsafe for us to rely on this in the near future.

Excise on Matches—The imposition of an excise duty on matches is already under active consideration, and we feel justified in contemplating the existence of such a duty from the outset of federation. We are advised that the probable net yield of the tax for all-india at a reasonable rate, with due allowance for reduced consumption, would be about 3 crores, of which at least 2 50 crores would be raised in British India.

Other Excises—It is possible that other excise duties may occupy an important place in the fiscal Policy of India in the future, but we do not feel warranted in felying upon the introduction of such measures in the early years of federation.

Monopolies -We have examined the suggestion, made at the Round Table Conference, that federal revenues should be augmented by a few selected monopoles From the fiscal point of view it is only in very special circumstances that a monopoly, whether of production, manufacture or sale, is to be preferred to an excise duty as a means of raising revenue. Except in so far as the proposals aiready noticed in regard to tobacco may be regarded as a monopoly, we can suggest no new commodity to which the monopoly method could be applied with advantage. The manufacture of arms and explosives, which has been suggested as a possible monopoly, is already subject to heense. Public utility monopolies stand on rather a different footing, but the only new federal monopoly of this kind that has been suggested to us is broadcasting, the revenue from which must be entirely problematical.

Commercial Stamps—In the Peel Report it was observed that "There is much to be said for federalising Commercial Stamps on the lines of various proposals made in the past," but no definite recommendation was made. We have examined this suggestion, but on the whole we cannot recommend it, at least as an immediate measure.

The yield of certain stamp duties which the States on the same basis as the might be placed in this category was, in 1930-31, super-tax on companies in British slightly more than one crore. This was a yield at present would be negligible.

sub-normal year, and the normal yield snould be somewhat higher. In 1930-31 about 40 per cent. of the yield was received by Bombay (one-eighth of this being attributable to Sind), 27 per cent. by Bengal and 12 per cent. by Madras. The loss of revenue resulting from the federalisation of these duties would therefore be unevenly distributed, and their federalisation would not ease the problem of distributing income-tax.

Further, there are obvious difficulties in the way of separating stamp dinties into two classes, commercial and non-commercial. It could only be done by means of a schedule, and a large element of purely arbitrary selection would be involved. The simple constitutional solution would be to class all stamp duties as provincial sources of revenue.

We have given some attention to the question considered by the Federal Structure Committee whether the Provincial Governments should be given power also to fix the rates of duty on all stamps, or whether legislation on this subject should be reserved, wholly or partially, to the Federal Government We suggest that the Federal Government should retain the power to legislate on behalt of the Provinces in regard to those stamp duties which are the subject of legislation by the Central Government at the date of tederation. The duties which are now the subject of central legislation are those on acknowledgments, bills of exchange, share certificates, cheques (not now dutiable), delivery orders in respect of goods, letters of allotment of shares, letters of credit, insurance policies, promissory notes, proxies, receipts and shipping orders. We understand that proposals have been under consideration for adding other duties to this list, and would suggest that, if any such additions are contemplated, that should be made before the establishment of the Federation.

We ought to add, in this connection, that difficulties already arise in estimating the share of each Province in the proceeds from the sale of postage stamps for use on taxed documents, and these difficulties may be expected to lead to considerable friction with the Provincial Governments unless a more satisfactory system can be devised.

Finally, in proposing that the proceeds of commercial stamps should be assigned to the Units, we have to some extent been influenced by a doubt whether the problems arising from the imposition of federal stamp duties in the States might not be disproportionate to the revenue involved. We do not, however, wish to prejudge the possibility that, as part of the general federation settlement with the States, it might be found desirable to in lude these duties among the sources of federal revenue. This consideration might well outweigh the reasons which have led us to recommend that commercial stamps should not be made a source of federal revenue.

Corporation Tax — From the financial point of view, it seems clear that, if a corporation tax were imposed on companies registered in the States on the same basis as the present super-tax on companies in British India, the yield at present would be negligible.

### Provincial.

Taxation of Tobacco.—We have already dealt briefly with this question and have suggested that the taxation of tobacco, otherwise than by excise on production or manufacture, should rest with the Units, but that the Federal Government should be given the right to impose a general federal excise. This distinction is, to regard we think, justified by the fact that er hypothesis revenue. the introduction of excise duties on manufacture will be difficult, if not impossible, until manufacture becomes more highly industrialised; and as that development takes place an excise levied at the factory by one Unit of the Federation would be a tax on consumers in other Units It will be seen from our later proposals in regard to powers of taxation that the federalisation of tobacco excise would not preclude the Federal Government from assigning the proceeds to the Units, it it so desired

There is, unfortunately, no material which would enable us to estimate the yield of any of these tornis of taxation. The provincial eventually they may be expected to torm at least a very useful additional source of provincial

Succession Duties — Bombay is, we believe, the only Provincial Government which has attempted legislation for the imposition of succession duties, and the attempt was unsuc-Government of India. We propose elsewhere that succession divisions and that cover that legislation should have been undertaken by the Government of India. We propose elsewhere that succession duties should be classed among taxes leviable by the Federal Government for the benefit of the Units; but clearly the facts would not justify rehance on them as a source of revenue in the near future.

Terminal Taxes -- We have been asked to weigh the issues which arise from the proposal to introduce terminal taxes generally as an additional source of revenue for the Provinces As the arguments for and against this proposal have been so fully set forth in previous reports, it scarcely seems necessary to re-state them here The feature of such taxation which has impressed us most seriously is its operation as, in effect, a surcharge on rallway reights. Where municipal octrols are in force, there appears to be a tendency to substitute for the general levy of dues on all goods entering the municipal boundaries the simpler alternative of a terminal recommend that, if terminal taxes are to be

and Orissa are the two Provinces which, having few or no municipal taxes of the kind at present, are most desirous of deriving provincial revenue from this source. While we do not rule out the possibility of terminal taxes in these two Provinces and elsewhere as a temporary expedient, in view of the practice which has grown up in various parts of India, we are not prepared to regard terminal taxes as a normal source of

Taxation of Agricultural Incomes.—We have not considered the broad issues of policy involved in the taxation of agricultural incomes, but we have considered, as we were commissioned to do, the more limited question of "the possibility of empowering individual Provinces, it they so desire, to raise, or appropriate the proceeds of a tax on agricultural incomes. In view of the close connection between this subject and land revenue, we agree that the right to impose such taxation should rest with the Provinces. For the same reason, we think that this right should be restricted to the that this right should be restricted to the taxation of meome originating in the Province concerned. There will presumably be no difficulty in drafting into the constitution of agricultural income which has so long been recognised in Indian income-tax law and practice.

We are not prepared to express a final opinion as to whether agricultural and non-agricultural income should be aggregated for the purpose of determining the right of the assessee to exemption and the rate of taxation to which he is liable on either section of his income; and we doubt whether any provision need be inserted in the constitution on this point since we are advised that, in practice, it would scarcely be possible for either the Federal or a Provincial Government to take into consideration income not liable to taxation by it, except with the consent and co-operation of the other Government,

We are aware of no reliable data for estimating the yield of such taxation.

Conclusion —In this survey of possible sources of additional revenue, we have deliberately left out of account the question whether or to what extent it would be possible to increase the yield of existing taxes. We have confined ourselves to an examination of new sources, and in this field the results of our survey are not encouraging. We have found that such provincial taxes as appear to be within the sphere of practical politics in the immediate future cannot be relied on to yield tax collected at the railway station, and there any substantial early additions to provincial is already a danger that this habit may result revenues. In using the phrase "practical in diversion of traffic to the roads. We therefore politics," we are not, of course, expressing an opinion as to whether this or that tax ought regarded as a permanent part of the financial or ought not to be imposed, or even as to whether structure, they should be imposed by the it is or is not likely to be imposed by the legisla-Federal legislature for the benefit of the Units Federal legislature for the benefit of the Units tures of autonomous Provinces when these Such terminal taxes as are already in existence are constituted. We are only noting the (mainly as municipal taxes) will full into much fact that the opposition to certain forms of the same category as other taxes classed as taxation, or the difficulty of their imposition, federal which, at the time of federation, are is still so great that they are not likely to be being levided by contain 1975. being levied by certain Units, but though adopted soon enough to influence the financial it may be necessary for this reason to authorise situation at the time when the Federation the municipalities and Provinces concerned to comes into being. In the federal sphere, the continue to raise these taxes, they should be excise on matches is the only tax which we feel allowed to do so only within limits land down justified in taking into account as an immediate by the Federal Legislature. Assum and Bihar j reinforcement of federal revenues, Railway Finance.—The year 1924-25 was marked by a step of great importance in the better organisation of Indian finance. As is explained in detail under the section Railways (q.v.) the Government of India is a great railway owner. It owns and operates itself a very large proportion of the railway system through what proportion of the railway system through what are called State Railways; it is the principal shareholder in other lines which are leased to Companies which operate them. Prior to the year in question, the railway finances were incorporated in the general finances of the country. The effects of this were unfortunate. As the finances of a State are not managed on commercial lines, the railways were not conducted on commercial principles. Then the annual allotments to railway expenditure were not determined by the needs of the railways themselves, but by the amount at the disposal of the Government of India. The evil effects of this policy were forcibly exposed in the report of a strong committee of investigation, usually called after the name of its chairman, the Acworth Committee, which recommended the entire separation of the Railway Budget from the general finances. Some delay incurred in giving make the contribution to general revenues.

effect to this recommendation, but it was carried out in the year 1924-25. The bases of the settlement were complete separation of finance; a definite annual contribution from the railway revenues to the general revenues; and the creation of a Standing Finance Committee of the Legislative Assembly to review estimates of railway expenditure before they are placed before the Assembly. The failway contribution was settled on the basis of one per cent, on the capital at charge, plus one-fifth of the surplus profits; further, if after the payment of the contributions so fixed the amount available for transfer to Railway Reserves exceeds the sum of Rs. 3 crores, one-third of the excess should be paid to the General Revenues. The effects of this change are expected to yield to the General Revenues a fixed contribution from the railway property instead of a varying figure destructive of accurate budgetting and expected to a relief the relief of the reserves of the relief of budgetting, and to give to the railways the usufruct of their operation and secure management and development on commercial principles.

In the past few years, owing to the economic depression, the railways have been unable to

### I. RECENT INDIAN FINANCE.

The year 1924 marked a distinct and very Retrenchment and Taxation.—Owing to important stage in the finances of India. Those the insistent demand for retrenchment the who have studied the history of Indian finance Government of India appointed in 1922 a will remember the general trend of the country's balance sheet. Up to the outbreak of the war it was a record of very careful finance, with a general surplus of revenue over expenditure, all such surpluses, save when they were in the nature of "windfalls" going to the avoidance of debt. Throughout the war the finances were carefully handled and with certain moderate increases in taxatien the accounts were made to balance. But commencing in 1919 a lamentable change came over the situation. The wanton invasion of India by Afghanistan meant a war which cost the exchequer directly some 34 crores of rupees. Nor was this all. Whilst the military resistance of Afghanistan to the Indian forces was contemptible, and Kabul lay open to easy seizure if it had been thought worth while to occupy it, the effect of this attack was to set a large part of the North-West Frontier ablaze and to thrust on the Government of India a series of costly expeditions. When these were completed, there remained the necessity of establishing a new Frontier system to take the place of that which collapsed in 1919. This especially in the notoriously troublesome country of Waziristan, (q. v. Frontier) involved the occupation of certain dominating posts and of connecting them with each other and with the advanced military stations of India with the advanced military stations of India by a series of very expensive roads. This abnormal expenditure dislocated the financial equilibrium of the whole country. Nor is it possible to acquit the Finance Department of the Government of India in the difficult post-war peried of a relaxation of that close control of expenditure which in previous years had balanced the accounts, even in the years of famine and plague. The result was that the accumulated deficits of the Government of Indis reached the very high figure of Rs. 100 crores. This led to two results.

retrenchment committee, on the model of the Geddes Committee which overhauled the extravagant post-wer expenditure of the British Government. This committee is generally called after its charman, the Inchcape Committee. It sat in 1923, and presented a report which recommended reductions in expenditure which amounted in the aggregate to Rs. 18 crores.

Financial equilibrium was established and a surplus realised in the Budget of 1923-24.

Statement comparing the actual Revenue and Expenditure of the Central Government since 1921-22.

### II. THE PRESENT FINANCIAL POSITION.

world, felt the full force of the economic blizzard which began in 1930 and attained its maxiwhich began in 1930 and attained its maximum the following year. The net result from the Government of India's point of view was the introduction during 1931 of two Budgets, the ordinary Budget in the spring of the year and a supplementary Budget containing fresh taxation proposals in September. When Sir George Schuster faced the Legislative Assembly at the end of February, he had a sorry tale to tell Trade depression, coupled with civil disobedience movement, had completely vitiated the estimates made for 1930-31. These estimates showed a surplus of Rs. 86 lakhs; the revised estimates worked upto a deficit of Rs. 13.56 crores, which the Finance Member said would remain uncovered and would be added to the unproductive debt. The main items of deterioration as compared with the Budget can be summarised as follows :-

Lakhs. Important revenue heads, viz, Taxes on Income, Customs. Salt and Opium (net) Posts and Telegraphs 12,10 (including Telegraph the Indo-European Department) 89 services, Currency and Mint. Other heads Debt 1,38 Total Rs. 14,42

Turning to the estimates for 1931-32, the Finance Member said they must face a fall in tax revenue, as compared with the current Budget estimates, of no less than Rs 13.16 crores, including a drop of Rs. 8 crores in Customs and 41 crores in income tax. The total deterioration under Finance headings was Rs. 376 lakhs and on commercial departments Rs. 118 laklis. This meant a total deterioration of Rs. 18.10 crores as compared with the Budget estimates for the current year, and as those provided for a surplus of Rs. 86 lakis the net deficit would be Rs. 17.24 crores. To meet this deficit the Finance Member announced a cut of Rs. 175 lakhs in army expenditure and retrenchment to the extent of Rs. 98 lakhs about Rc. 1 to Rs. 1-8-0 per cwt What I in civil expenditure, making a total saving of have now included is an increase of Rs. 1-4-0 per Rs. 273 lakhs. The estimated deficit was reduced thereby to Rs. 14 51 crores, which he proposed to cover by fresh taxation.

New Taxation Proposals —His proposals were grouped under two heads, Customs and Income Tax. Referring to the first the Finance Member said : "The heads in respect of which 1 propose alterations of the substantive tariff itself, are liquors, sugar, silver bullion, beteluuts, spices and exposed cinematograph The liquor duties are to be enhanced appreciably; the duty on beer and the like is at present undoubtedly low relatively to those on other alcoholic beverages and will be raised by about 66 per cent. above the present level,

India, in common with other countries of the medicines) will be raised by between 30 and 40 orld, felt the full force of the economic blizzard per cent. The duty on silver bullion I propose thich began in 1930 and attained its maxiother items mentioned will be transferred from the general rate of duty (now 15 per cent. ad valorem) to the "luxury" rate at 30 per cent. Of the surcharges, we have at a stroke added to the 10 per cent. schedule a surcharge of 21 per cent., to the general or 15 per cent. schedule one of 5 per cent., and to the "luxury" or 30 per cent. schedule one of 10 per cent. By far the most important of these surcharges is that 5 per cent. on the general revenue schedule of 15 per cent., and connected with this, I must mention a feature of particular importance. We propose for this purpose to treat the basic duty of 15 per cent on cotton piece-goods on the same lines as the general 15 per cent. schedule and to place the surcharge of 5 per cent. on these goods also The surcharge on the 15 per cent schedule is expected to yield 90 lakhs for cotton piece-goods and 2,63 lakhs for other goods. Coming now to the schedule of non-protective special duties, here we have made additions appropriate to the general scheme, and I need only mention specially the surcharges that I propose to levy upon kerosene and motor spirit Both customs and excise duty on kerosene are to be raised by 9 pies per gallon, while motor spirit is to bear a surcharge of 2 annas per gallon. Finally, I must explain my proposals as regards sugar. The position is special, because, while I am now proposing an increase in the duty for revenue purposes, we had received, just when my budget proposals were on the point of completion, the recommendations of the Tariff Board for the protection of sugai Summanised, the Board's recommendations are :—(1) a basic duty of Rs. 6-4-0 per cwt on all classes of sugar, including sugar candy, to be imposed for 15 years; (2) an additional duty of Re. 1 per cwt on all classes of sugar to be imposed for the first 7 years; (3) power to be taken to add 8 annas per cwt. to the duty at any time if the landed price of sugar at Calcutta ex-duty falls below Rs 4 per maund; (4) no protective duty on nolasses. My own proposals for revenue purposes had been very close to this, for I had actually contemplated an extra duty round about Rc. 1 to Rs. 1-8-0 per cwt What I This, as I cwt. on all grades of sugar have said, must be regarded purely as a revenue measure pending consideration of the Tariff recommendations The combined Board's effect of all these proposals as regards Custom duties will be to produce an additional revenue next year of 9.32 crores. We shall also obtain about 50 lakks more from the increased import duties on galvanized pipes and sheets which the House discussed on 28th January last. This will raise the additional yield to 9.82 croies. Incidentally, the new duties, which will operate from 1st March, and the increased duties on galvanized pipes and sheets, which came into force on 30th December, will add to our revenue for the current year a sum estimated at 88 lakhs, while those on wines and spirits (except detailed thus reducing the current year's deficit to natured spirit and spirit used in drugs and 12.68 crores."

Increased Income Tax.—Dealing with his proposed new tax on incomes, the Finance Member said: "The taxable minimum income Member said: The taxable minimum has been for income-tox—Rs. 2,000—will not be lowered. The rate of tax on the lowest zone up to Rs. 4,999 will be raised by 4 pies. The rates on higher grades up to Rs 39,999 will be raised in some cases by 5 pies, in some cases by 5 pies, in some cases by 7 pies, and in the highest of these grades by 7 pies. At present the highest rate is reached at Rs. 40,000. It is now 19 pies 1 propose a rate of 25 pies on incomes from Rs. 40,000 to Rs. 99,999, and a maximum rate of 26 pies on incomes of Rs. I lakh and over The estimated yield of these increases is 5,07 lakhs gross or, deducting 53 lakhs on account of increased refunds, 4,54 lakis net In addition to this, I propose certain changes as regards super-tax At present all assesses except Hindu undivided families are allowed a deduction of Rs. 50,000 in computing the income liable to super-tax. This will be lowered to Rs 30,000 except for Hindu undivided families and companies, which will be allowed, as at present, a deduction of Rs. 75,000 and Rs 50,000 respectively. In the new zone, 7 lakhs from the excise or 82 lakhs in all.

Rs. 30,001 to Rs. 50,000 the super-tax rate will be 9 pies. Above Rs. 50,000 the super-car law will be 9 pies. Above Rs. 50,000 the graduated scales will be increased by 2 pies throughout. The flat rate for companies will be 1 anna as at present. These changes will yield, it is estimated, 46 lakhs. Thus the total estimated additional net revenue from taxes on income will be 5 crores. Briefly they will add an extra charge of about 2 to 5 per cent. on all incomes. The rates of additional tax have been so adjusted as to produce, in the final result, an evenly graduated scale of burden increasing as the income increases, and this object must be borne in mind in interpreting our proposals. The total yield from the proposed changes in Customs duties and taxes on income thus amounts to Rs 14.82 crores, as against which the gap to be filled is Rs 14.51 crores, so that I am left with a small surplus of Rs. 31 lakhs.

Silver Duty.—Referring to silver, the Finance Member said the increase of two annas

### WAYS AND MEANS.

ever, rejected by the Assembly by 60 votes to 56, and was sent to the Council of State where it was passed It became law on being certified by the Governor-General. The gap of Rs. 105 lakhs caused by the amended income tax figures was partly filled by reduction of military ex-penditure to the extent of Rs 60 lakhs and by Rs. 15 lakhs cut in civil expenditure.

Other cuts made by the Assembly and accepted by Government included token reductions of Rs 100 in the demands for Customs, Income Tax, Executive Council and Army Department. Two cuts of Rs one lakh and Rs. 100 were made in the Railway Board demand and were accepted.

Supplementary Budget.—It soon became evident that the worsening of the trade depression had seriously vitiated the revenue estimates in the February budget, and in September Sir George Schuster came before the Legislative Assembly with a Supplementary Finance Bill The Finance Member said that the returns for the first five months indicated that they would fall short of their budget estimates for customs by at least Rs.10 crores, the heaviest reductions being under cotton piece-goods, sugar, silver, spirits and liquor, excise on motor spirit, iron and steel and in the jute export duty, while they expected a deficit of Rs. 11 crores on income-tax. Income from Railways and Posts and Telegraphs showed a similar decline. The total deterioration in income amounted to Rs. 11.33 crores in tax revenue, Rs.5.48 crores on commercial departments, Rs.2 29 crores in general finance headings, Rs. 23 lakhs under extraordinary receipts and Rs. 23 lakhs under other heads. As the budget provided for a small surplus of Rs. 1 lakh on the basis of the present estimates there would be a net deficit of Rs.19.55 crores. Putting the deficit for the current year and next year together they had a gap to fill of Rs 39.05 crores. He proposed to deal with the situation on three distinct lines, firstly, to reduce expenditure; secondly, to impose an emergency cut in salaries; and thirdly, to impose fresh taxation. Fletrenchment measures in civil expenditure he estimated would

The Bill in its recommended form was, however, rejected by the Assembly by 60 votes to 8, and was sent to the Council of State where it as a passed at became law on being certified by the Governor-General. The gap of Rs. 105 khs caused by the amended member said his first khs caused by the amended member as this caused by the amended member as the figures proposal would be an immediate mercase in the salt revenue by abolishing the credit systems which would mean that the revenue would be increased by a crore of rupees each year on this account. The main plank of his new taxation proposals was to put a temporary surcharge on all existing taxes with the exception of Customs. export duties, the surcharge being 25 per cent on the existing rates in each case. He proposed that the surcharge for the current year in income-tax should only be 12½ per cent, but it would be collected at this rate on the whole year's income. Government held that in the present emergency they were justified in reducing the income-tax exemption limit and imposing a small tax of four pies in the rupee on incomes between Rs. 1,000 and Rs 2,000 per annum. Dealing with special increases and new taxes, the Finance Member said. "We propose to increase the import duty on artificial silk piece-goods from 20 to 40 per cent. and on artificial silk yarn from 10 per cent. to 15 per cent. We also propose to increase the duty on brown sugar from Rs.6-12-0 to Rs 7-4-0 per cwt. This follows the Tariff Board's recommendation. As regards boots and shoes, we propose that there should be imposed as an alternative to the 20 per cent duty a minimum of 4 annas per pair. The duty will thus be 20 per cent. or 4 annas a pair, whichever is the higher. We also propose to increase the duty on camphor and on electric bulbs from 20 to 40 per cent. As regards all these articles the surcharge will be levied on the increased duty.

"Then there are three items formerly on the free list on which we think it justifiable to impose a small duty on revenue grounds. The result of the surcharges imposed in last Budget and proposed now is that the level of the general revenue tariff has been increased from 15 to 25 per cent. There is, therefore, some justification for adding a 10 per cent, duty to articles hitherto measures in civil expenditure he estimated would free. We propose to put duties of 10 per cent. on save about Rs. 30 lakhs in the current year, and machinery and dyes, and of a anna per lb. on raw Rs. 250 lakhs next year, while military expendictions of the cotton in the cotton mills, and I must true next year would be curtailed by Rg. 450 lakhs. to be in some ways inconsistent with previous policy. The justification must be the need for revenue, while as regards the cotton mills we may claim that on balance their position will be and if further increases of income-tax were to be General. added, that would go beyond the reasonable limit. We therefore propose that increases of income-tax both by way of surcharge on existing rates or by way of imposition of a tax for the first

expected to produce Rs.73 lakhs in a full year and go a long way to cover the deficit of Rs 92 lakhs in the working results of the Posts and Telegraphs Department which would be left even if the recommendations of the Posts and Telegraphs Accounts Enquiry Committee were accepted.

The net result for the current year was an estimated increase in taxation of Rs. 711 lakls which, together with Rs. 37 lakls from increased postal charges and Rs. 100 lakls as against an estimated deficit of Rs 19.55 for customs receipts in 1932-33 were put at a deficit of Rs 10.17 crores. On the other hand, in 1932-33 they would feel the full benefit of the retrenchment measures and the extre from salt revenue, meant, with retrenchment measures, an improvement of Rs. 938 lakhs as against an astimated deficit of Rs. 19.55 for customs receipts tion, making a total improvement of Rs. 24 73 crores against an estimated deficit of Rs. 19 50 crores. They should thus close the year with a surplus. of Rs. 5.23 crores. The combined result of the two years would be a deficit of Rs 4 94 lakis in each year for the provision for reduction Rs. 16 lakis. or avoidance of debt.

possible of the Assembly and lake less than for 1930-31 and Rs. 795 lakes strong opposition to certain sections of the lill less than for 1930-31 and Rs. 795 lakes strong opposition to certain sections of the lill less than the current budget. On the subject was manifested from the start. Most of the of retrenchment the Finance Member said: non-official members maintained that larger cuts in expenditure should be made, instancing

acknowledge that their imposition may appear increases were carried omitting the reduction of the minimum taxable income from Rs. 2,000 to Rs 1,000, and making the 25 per cent, surcharge levied during 1932-33 applicable only to incomes over Rs.10,000 per annum. When the discussion finished the Bill was returned to the Assembly Improved by our surcharge proposals, for under finished the Bill was returned to the Assembly these the import duties on cotton piece-goods will with a recommendation by the Governor-General be increased by one quarter. This more than that it should be passed in its original form. offsets the burden of \( \frac{1}{2} \) anna per lb. on goods made Lord Willingdon pointed out that the amendfrom imported cotton, and affords an effective ments made by the Assembly would reduce the answer to possible criticisms on the grounds to expected revenue by Rs.4 crores over eighteen which I have referred. I have one more word months, and added "I am satisfied that I cannot which I have referred. I have one more word months, and added "I am satisfied that I cannot to say as regards the income-tax proposals. In consistently with my responsibilities allow this considering the cut to be applied to the salaries deficiency to remain uncovered." The Bill as of Government officials we considered what total amended was, however, rejected by the Assembly reduction of their emoluments could fairly be by 63 votes to 48. It was taken to the imposed. If the general rate of reduction is to be Council of State where it was passed and was 10 per cent., that represents what we think fair, thereafter certified as law by the Governor-

The 1932-33 Budget -Presenting the 1932-33 budget on March 7th, 1932, the Finance Member explained that the circumstances were somewhat time on salaries from Rs.1,000 to Rs 2,000 should unusual. The supplementary budget had been time on salaries from Rs.1,000 to its 2,000 should unusual. The supplementary budget had been been energed in any general cut which we are introduced only six months earlier. He did not, imposing or which the Provincial Governments therefore, propose to ask the House at the may impose."

The Finance Member's final proposal was to increase the postage for inland letters to 1½ annas instead of 1 anna and for postcards to 9 pies instead of 1 anna and for postcards to 9 pies instead of 6 pies. That enhancement was year to Rs. 10.17 crores and for the following expected to produce Rs. 73 lightly in a full year and year to realise a surplus of Rs. 523 lakis but year to realise a surplus of Rs. 523 lakhs but experience had made it necessary to revise these estimates A deterioration in the figures by about Rs 3 crores was to be allowed for each year and it was anticipated that the current vear would close with a deficit of Rs. 13 6 crores and that the surplus for 1932-33 would be Rs. 2.15 crores. The Finance Member reminded the House that for the current year and the next year combined no less than Rs. 13.71 crores was being provided from revenue for reduction

The main deterioration occurred under the heads of sugar, silver, cotton piecegoods and liquois. Referring to the revenue from the commercial departments the Finance Member said that no contributions from the railways were expected or the two years would be a deficient or a contributions from the failure appearance corors, which they were justified in regarding either in the current year or the next. As as covered by making during this period of regards Posts and Telegraphs the loss in working exceptional stress a reduction of about Rs 247 in the coming year was expected to be about

Assembly Opposition.—The Finance Membry's statement and fresh taxation pro-stitumed at Rs. 67,39 lakhs which was Rs. 11,84

" For the present I would remind Honourable Army demands. When the Bill was discussed compare what we have achieved with the recomclause by clause, a motion was carried placing mendations of the various Retrenchment Commill machinery, etc., again on the free import mittees. The total recommended by the four list and the proposal to increase postal rates was civil Sub-Committees was Rs. 4,99 lakhs, and rejected. Amendments to the income tax we have against this achieved economies of

"I would mention two other striking results in this connection. The first is the actual reduction in Expenditure. I have already given the figures from the accounts showing a reduction of 11,84 lakhs for Civil and Military Expenditure (excluding Posts and Telegraphs) once 1930-31. The position may also be stated in another way. If Honourable Members will look at the analytical table which is included in the Financial Secretary's memorandum (which is prepared now on a slightly different basis from that which I circulated in September) they will find that what I may describe as the net controllable administrative expenditure, civil and military (which excludes the cost of collection of taxes and of the administration of salt and Posts and Telegraphs expenditure) has been brought down from just over Rs. 76 crores in 1930-31 to just over Rs. 64 crores for 1932-33, a reduction of about 16 per cent.

The second fact is of a more distressing nature but it indicates the magnitude of the effect which we have made. In pursuance of the retrenchment campaign the following appointments in the Civil Departments (including Posts and Telegraphs) have been or will shortly come under reduction so far as information is at present available-

Gazetted officers			• •	299
Ministerial establishment		and	other	
superior establishment .	•			5,279
Inferior establishment .	•	••	••	1,485
		Tota	ı ¯	7,063

The 1933-34 Budget.—In introducing the budget, the Finance Member summarised the results for the two previous years. The results for 1931-32 had turned out to be Rs. 2 crores better than anticipated in the budget speech and the account for the year showed a deficit after providing nearly Rs. 7 crores for the reduction of debt of Rs. 113 crores. For the year 1932-33 the latest revised estimates indicated that the surplus would be Rs. 217 lakhs or Rs. 2 lakhs more than was estimated. He continued to estimate revenue for 1933-34particularly customs revenue-is, in view of the completely uncertain and abnormal conditions, a task of quite unprecedented difficulty. Indeed I may say that accurate estimation is impossible. In these circumstances and for the reasons which I have explained, we have thought that the most reasonable course is to assume that the general position next year will be the same as for the current year, neither better nor worse, and in particular that India will be able to maintain the same purchasing power for commodities imported from abroad.

Customs.—The assumption, however, that the value of imports will be maintained does not necessarily imply that the value of the import duties will also remain the same.

I have already explained the special position as regards sugar, showing how the present under these civil heads for next year, I am glad development of the Indian industry is affecting to be able to report a still further improvement

Rs. 4,33 lakhs or nearly 87 per cent -before our revenue. On these considerations we think allowing for terminal charges which, of course, it necessary to allow for a drop of one crore the committees did not take into account." will not be offset by any increase under other

> In regard to cotton piece-goods also, for reasons which I have explained, we think it necessary to regard the revenue from import duties—at least on Japanese goods—as to some extent abnormal and not likely to be repeated Here therefore we have allowed for a drop of 30 lakhs.

> As against these reductions we have thought it safe to count on a small revenue (25 lakhs) from silver imports-because having closed the gap in our land customs line on the Burmese frontier, through which a large trade in silver from China was suddenly developing in the course of the last year, we think it reasonable to expect a moderate resumption of dutable ımports.

> Making allowance for these and other minor variations, our customs revenue estimates for next year are put at 51,25 laklis showing a reduction of 104 laklis from the revised estimates of the current year.

> The position as regards net receipts may be summarised as follows .-

		(Lakhs).
Budget Estimate,	1932-33	 52,31 27
Revised Estimate,		 52,28 55
Budget Est mate,	1933-34	 51,24 60

Civil Expenditure. -" The budget estimate of Civil expenditure for the current year (1932-33), i.e., excluding military expenditure, expenditure on Commercial departments and Debt services, was 20,65 lakhs. Our revised estimate now gives the figure as 20,89 lakhs. There is thus an apparent increase of 24 lakhs But a closer examination shows that this increase. does not denote any increase in real expenditure, and, indeed, that the economy in recurrent expenditure has been greater than that which we promised. The figure of expenditure as shown in our accounts has had to be increased because special items amounting in all to 681 lakhs, but the great bulk of which do not denote real expenditure, have had to be included.

"Under the other heads of real expenditure we shall have achieved during this year economies of Rs. 45 lakhs more than we promised. It may be remembered that in my budget speech in March last I stated that, broadly speaking, against a total retrenchment in expenditure of Rs. 499 lakhs recommended by the four civil sub-committees, Government had achieved economies of 433 lakhs, or nearly 87 per cent. before allowing for terminal charges which the committees did not take into account. The results according to the revised estimate for the current year which I have just given show that the actual economies achieved in normal expenditure amount to 45 lakhs more than this, that is to say, to a total of 478 lakhs, or nearly 96 per cent. of the amount recommended by the retrenchment committees.

"Turning to the estimates of expenditure

As compared with the current year with its EXPENDITURE—budget estimate of 20,65 lakhs and the revised estimate of 20,89 lakks, the estimates for 1933-34 are 20,53 lakhs, that is to say, a reduction of 36 lakhs on the current year in spite of the following facts; first, that we have allowed for reducing the cut in pay to 5 per cent thereby incurring extra charges of 28 lakhs on these particular civil heads, secondly that we have to meet the normal increments in time scale pay which still involve an annual addition of pay which self involve an annual addition of something like 15 lakhs, and thirdly, that we have to meet new obligatory expenditure amounting to about 17 lakhs, the nature of which I shall shortly explain. If all these items are taken into account it will be seen that the total of the net reductions otherwise effected under the normal heads of expenditure amount to no less than 96 lakhs. Honourable Members may say that they are not concerned with this figure but only with the saving of 36 lakhs at 175 lakhs, and thus the surplus of 217 lakhs actually effected, but I have given these shown in the revised estimate for the current explanations in order to show how we are year will be reduced to surplus of 42 lakhs. continuing the retrenchment effort and what a constant effort is required 'merely to provent expenditure from growing.' "

Military Expenditure — "When I turn to the provision for the Military or Defence Budget the results are equally, or even more, satisfacthe results are equally, or even more, satisfactory. For the current year (1932-33) allowing for the full effects of the 10 per cent. cut in pay, the net budgetary allotment was Rs. 46.74 crores. For next year the net expenditure provided for in the estimates, after allowing for an extra charge of Rs. 52½ lakhs due to the reduction in the cut in pay to 5 per cent. is Rs. 46.20 crores. That is to say although the pay bill is increased by Rs. 52½ lakhs the net expenditure is to be reduced by Rs. 54 lakhs."

85 163 338

As a result of the changes thus summarised

The Cut in Pay.—Concerning the Government's decision to restore half the cut in pay the Finance Member said that the total cost was Rs. 108 lakhs.

As against this the Central budget will recover as a result of the withdrawal of the exemption of income-tax surcharges and the tax on incomes below Rs. 2,000 from Government officials—not only officials paid against the Central budget, but officials of the Railways and officials serving under the Provincial Governments-a net increase in income-tax receipts of 53 lakhs.

The net cost of the proposal to the Central Government is thus 55 lakhs.

Changes in Duties —The budget announced changes in the import duties on boots and shoes and artificial silk goods.

Decisions. The Assembly threw out the proposal for a stamp duty on cheques and by 59 votes to 33 carried a resolution to reduce the rate of income tax from 4 pies to 2 ples on incomes between Rs. 1,000 and Rs. 1,500.

The 1934-35 Budget.—Summing up the results for 1933-34 when introducing the 1934-35 budget the Finance Member said that with the arrangement to provide Rs. 3 crores for debt reduction instead of the Rs. 6.89 crores due under the debt reduction convention the year would close with a surplus of Rs. 129 lakhs. This sum Government proposed to set aside as a special fund to cover relief measures in respect of cartiquake damage. For 1934-35 Government were expecting a drop of Rs. 280 lakhs in revenue which was more than account-ed for by the anticipated falling off in sugar import duties, while expenditure would be Rs. 2 lakhs higher. In order to provide an even balance for 1984-35 it was necessary to find means of improving the position to the extent of Rs. 153 lakhs.

A loss in import duties of 225 lakhs was anticipated.

Other Revenue.—The changes in other heads of Revenue do not call for any detailed comment. We are allowing for a slight recovery the budget for 1933-34, though it is actually of 12 lakhs in Taxes on Income to a total of about the same as for the revised estimates. 172 crores, and we should have put this 25 The comparison is complicated by the position 171 crores, and we should have put this 25 lakhs higher if it had not been for the losses lakhs higher if it had not been for the losses as regards war debt payments. In the budget which must be anticipated from the earthquake. of 1933-34 we provided 88 lakhs against this We are also allowing for an increase of 18 lakhs Oplum of 64 lakhs. The declining revenue from the latter item owing to the policy adopted on the revised estimates. As regards 1934-35, iron the latter item owing to the policy adopted on the revised estimates. As regards 1934-35, His Majesty's Government has already agreed allowed for in Revenue as compared with the Revised estimates for the current vers to the postponement of the instalment due in Revenue as compared with the Revised estimates for the current vers to the postponement of the instalment due in lakhs, which is more than accounted for by the loss on sugar.

Sir George Schuster said :-

searching for further economies, and have regidity maintained our rule that no new item of expenditure shall be admitted. or expenditure shall be admitted unless it is absolutely obligatory or unless it is likely to be economically productive. We have also, as I have already announced, decided that the 5 per cent, cut in pay ought to be retained for another year. As a result there is a very existent and account of the control of the contro another year. As a result client is a very satisfactory reduction of 2,12 lakhs in the Budget provision for next year as compared with the Budget for the current year, and of 2,90 lakhs as compared with the actuals for last year (1932-33) for, while expenditure on Civil Administration has been kept practically unchanged in spite of the normal increments in pay, there is a substantial saving on interest charges due to conversion schemes and the improvement in Government credit, while the military contribution from His Majesty's Government means a big reduction in the Army Budget.

The demand under the Defence head stands for next year at 44.38 crores. This is 4 lakhs less than the Revised estimates for the current year and 1,82 lakhs better than the Budget estimate. The latter big reduction is of course due to the payment now made by His Majesty's que to the payment now made by His Majesty's Government as a result of the finding of the Capitation Tribunal, to which I have already referred. The House is fully informed as to the facts in this case, and I need not add further explanations, but I wish to take this occasion to review the course of military expenditure during the period of my office as Finance Mem-ber. The salient fact is that the total demand ber. The salient fact is that the total demand has been reduced by no less than 10.72 crores, from 55.10 crores in 1929-30 to the present figure of 44.38 crores. This is a remarkable reduction and I venture to think that if I had reduction and I venture to think that if I had prophesied its achievement in 1929, my prophecy would have been greeted either with incredulity or, among those who gave credence to it, with extreme satisfaction. In the debates at that time the great demand was always that we should get Defence expenditure down to the so-called Incheape figure of 50 crores. Yet now we are nearly six crores below that.

liability, but as no payment was made this amount was saved, and, as I have already evised estimates for the current year is 2,74
skhs, which is more than accounted for by the
ss on sugar.

Expenditure.—On the subject of expenditure

Figerge Schuster said —

So far as concerns expenditure, we are still

The standard of the way also assumed that the outstanding arrears, excluding the amount in suspense, will be capitalised and the total discharged by equated payments ending 1952 to cover principal and interest.

On this basis we are making provision for 58 lakhs in the 1934-95 budget. Excluding these

1933-34 Revised Nil.

-59 lakhs (i.e., 1934-35 Budget net surplus).

There is thus really an improvement of 87 lakhs on the budget for 1933-34 and of 59 lakhs on the Revised.

Under Interest on Other Obligations there is an increase in the budget provision for 1934-35 of 72 lakhs over the budget for 1933-34 and 68 lakhs over the Revised estimate. This is accounted for by an extra charge of 50 lakhs in respect of bonus on Post Office Cash Certificates, while the balance represents mainly interest on the increased amount of Post Office Savings Bank deposits.

I might sum up the result by saying that as regards Interest charges, including both Interest on Ordinary Debt and Interest on Other Obligations, we have to provide next year 45 lakhs less than was allowed for in the budget of 1933-34, but 68 lakhs more than we are allowing in the revised estimates, and that as against the latter increase we are providing 58 lakhs more on War Debt and 50 lakhs more on Post Office Cash Certificates.

Changes in Duties.—The Finance Member announced the imposition of an excise duty on sugar in the following words :-

After careful consideration we have decided to propose a dual policy; on the one hand the imposition of an excise duty on factory produced sugar, and on the other hand the introduction of legislation by the Central Government which will enable the Provincial Governments to apply schemes for enforcing a minimum price for cane to be paid by the factory to the grower. As I have already stated, the present duty of Rs. 9-1-0 per owt is Re. 1-13-0 above the basic duty of Rs. 7-4-0 recommended by the Tariff Board, In their report, however, the Tariff Board recommended that there should be Debt Services.—Regarding the interest on debt, the Finance Member said :—It is a of protection by 8 annas per cwt. when Java notable fact that the net figure for 1934-35 sugar was being imported at a price less than under Interest on Ordinary debt is less than Rs. 4 per maund to Calcutta. We propose to 880 Finance.

assume that the conditions justifying this extra | Taking the prices of silver which have been ruling margin of protection are likely to continue in existence for the present, and therefore to leave a protective margin of Rs. 7-12-0 per cwt. and to impose an excise duty of Re 1-5-0 per cwt. We assume that this will yield Rs. 1,47 lakhs, and out of this we propose to set aside an amount equivalent to 1 anna per cwt., representing about 7 laklis, as a fund to be distributed among the Provinces where white sugar is produced for the purpose of assisting the organisation and operation of co-operative societies among the cane growers so as to help them in securing fair prices, or for other purposes directed to the same end.

Member Duties -The Finance Tobacco

Under our present tariff, as modified by the two surcharges, the duty on cigarettes works out at something like double the duty on the tobacco used in making similar cigarettes in India; and the result has been to divert the manufacture of the great majority of the leading brands of eightettes to factories in India belonging to the same interests as previously imported these brands from abroad. Such an industrial development has never made a claimand I do not think it could make a good claimthat it satisfies the principles of discriminatory protection and should therefore receive abnormal encouragement from the tariff. We have now decided to fix the relation between the duty on cigarettes and the duty on raw tobacco on a more rational basis, and we have considerable hopes that, while not depriving the interest concerned of reasonable assistance, it will bring back the class of eigarette concerned into the field of open competition between the imported and locally made article, and result, without detriment to the interest of the consumer, in some increase of revenue from import duties. We propose to take for cigarettes a specific duty roughly corresponding to the identical amount that would have been paid on the quantity of leat contained in the cigarettes and to add to this specific duty the normal revenue duty of 25 per cent. ad talorem, thus leaving the local industry with no more than the benefit which is enjoyed by every non-protected industry engaged in the manufacture of goods which are subject to our present normal revenue duty of 25 per cent. The details are as follows.

At present what I may call the basic rate of duty on eigarettes is Rs. 10-10 per thousand, while there are smaller classes which are assessed at Rs. 15 and Rs. 8-8 per thousand, the division between these classes being dependent upon values. The present rate of duty on raw tobacco is Rs. 2 per lb, standard and Re. 1-8 preferential (Imports entitled to the benefit of preferential duty are negligible). The revised rates that we propose are .-

On raw tobacco: Rs. 2-6-0 per lb. standard and Re. 1-14-0 per lb. preferential.

On cigarettes: Rs. 5-15-0 per thousand plus 25 per cent. ad valorem.

Silver. - A reduction in the silver import by 21 annas to 5 annas per ounce.

The Finance Member said to-day we think we can lower the duty without risk of doing so. with additional 11 anna for successive weights

recently in London (about 191d. to 201d. per standard ounce), the prices in Rombay have been ruling round about Rs. 55 per 100 tolas as against 191d. per ounce in London. On the basis of a London price of 194d. was calculated that the parity price in Bombay allowing for import duty and other charges, ought to be Rs. 61-11-9 per hundred tolas, so that it looks as if the Bombay prices have been keeping at a level at least Rs. 6-11-9 per 100 tolas below the full parity The duty of 7½ annas per ounce is equivalent to Rs 17-9-3 per 100 tolas. It appears therefore that we might reduce the duty by one-third, i.e., by 2½ annas per ounce without thereby necessarily affecting the Bombay price at all, for it would still be somewhat below the London

Export Duty on Hides.—The export duty on raw hides was abolished by the 1934-35 budget.

Excise on Matches —Announcing that the Government intended to hand over half the jute export duty to the jute producing Provinces, the Finance Member said that the Government of India would recoup their losses by imposing a levy on matches at the rate of Rs 2-4-0 per gross of boxes on matches made in British India.

Decisions.- The Assembly accepted the whole of the financial plan except to the extent that Government themselves accepted a change in the match excise duty. The changes as summed up by the Select Committee which examined the Bill, were -"The most important question which confronted us was whether the duty as fixed by the Bill would so react on the retail selling price of natches as to bring about a very serious dim-nution of sales. In order to avoid this it seemed to us essential that the duty be so regulated as to make it possible a reasonable sized box of matches retailed singly in bazaars at the price of one pice.

After very careful consideration we have come to the conclusion that if this result is to be achieved and a sufficient margin of profit left for retailers and manufacturers, the rate of excise duty initially, at least, should not be fixed higher than one rupee per gross of boxes containing on average 40 matches.

We hold that the duty could be fixed at corresponding rates for matches in boxes of 60 or 80, and that the classification of matches according to these standards is most suitable and convenient from the administrative standpoint.

From matches packed otherwise we have left the duty to be fixed by the Governor-General-in-Council."

Telegraphs.—The following Posts and Telegraphs.—The following changes in postal and telegraph charges were announced :-

Postal.—(a) In the postal tariff we propose to lower the initial weight of inland letters from 2½ tolas to ½ a tola coupled with a reduc-tion in the charge from 1½ anna to one anna. For heavier letters the charges will continue to be 11 anna for letters not exceeding 21 tolas.

of 24 tolas or fractions. This change introduces a lighter unit of weight and will undoubtedly benefit the poor citizens and the business community. Allowing for a recovery of 10 per cent, in traffic we estimate that in the first year this reduction will involve a loss in revenue of 27 lakins, but we have good reasons to hope that in the second year this loss will practacally disappear, and that thereafter there will be a gradually increasing net gain.

(b) As a second change in postal charges we propose the remission of the extra pie per five pice embosed envelope which was imposed in 1931 to recover the cost of manufacturing the envelope. This is more of the nature of an administrative retorm considered necessary on general grounds than a regrading of the rate, but it is again a reform which will benefit the ordinary citizen. We estimate a loss of revenue of two and a half lakhs from this change.

(c) Thirdly, as regards Postal rates, we propose a small change in a contrary direction, namely, that the initial charge on inland book packets not exceeding 5 tolas in weight should be raised from 6 to 9 pies. The book packet method of transmission is undoubtedly being abused, and a change is ungently necessary to stop the diversion, with consequent loss of revenue, that is occurring of post eard traffic to the book packet category. We estimate a gain of a little over 5 lakhs in revenue from thus change

Telegrams—The last change which we propose is as regards Telegrams. Instead of having, as at present, a minimum charge for ordinary telegrams of 12 annas with a surcharge of one anna for a message of 12 words, we propose to introduce a minimum charge for a telegram of 8 words of 9 annas, while that for an express telegram of the same length will be one rupee and two annas. For each additional word in the two classes of telegrams the additional charge will be one and two annas respectively. We estimate a loss during the first year of 3 lakhs from this change, but here also, as in the case of the postal rates, we hope that in the second year this loss will disappear, while without making this change we consider that there is a prospect of a continuous decline in telegraph receipts.

The 1935-36 Budget—This Budget is a surplus of Rs 156 lakls available for tax reduction. Before dealing with this issue the Finance Member said that he must mention three items—

Additional Import Duty on Salt—The first of these is the additional unport duty on salt. Personally I am very doubtful whether this duty can ever achieve the purpose for which it was designed. I have moreover a good deal of sympathy with the views which have in the past been expressed by Hon'ble. Members from Bengal that an impost which has the erect of helping the producers of Aden at the expense of the cosumers of Bengal is fundamentally unfair. In any case the duty will require consideration in view of the impending separation of Aden and Burma. Taking all these things into consideration I was disposed to think that the duty ought to be abolished at once but that would perhaps have been a little harsh to the vested interests which have

grown up and I shall therefore propose to the House that the duty shall be extended for one vear, without prepuded to any action which Government may see fit to take at the end of that vear. I hope that this extension will be accepted by the House though I should perhaps make it clear that, if it should prefer to remove the duty at once, in this matter at any rate we should accept its decision, incidentally we do not propose to make any change in the arrangements for the distribution of the proceeds of the duty.

Silver - The next is silver and here we propose to reduce the duty to 2 annas an onnce. This action is dictated by no theory as to the place to be taken by silver in the monetary economy of the world nor has it any connection with the view sometimes expressed that India should be encouraged to build up her boards of the metal It is simply a matter of business. There is no doubt at the present level the duty is encouraging smuggling, there is no doubt that the smnggling is extremely difficult to prevent and there is no doubt that the honest trader is being injured by the illicit trade which is being carried on At the lower level which we now propose sinuggling should become unprofitable and the honest trade will come into his own. I propose to assume that we shall get the same yield from the 2 annas as would have been obtained from the 5 anna duty which is, I think, fully justified by the circumstances in which the reduction is taken place. The reduction will take place immediately by not meation.

Export Duty on Skins -The third change of a minor order is the aboution of the export duty on raw skins. During the eight months ending 30th November 1934 the export trade in raw skins declined in volume, as compared with the corresponding period of the previous year, from 13,133 tons to 8,938 tons and in value from Rs 2,24 lakhs to Rs. 1,19 lakhs. We all believe of course that the most necessary factor in India's economic recovery is revival of her export trade, Many of us teel angry and humilitated at om inability to suggest any positive action designed to promote that end apartition international action of a kind which is not at present likely to be taken, namely, a general agreement to reduce tariffs and quotas. But here is one ease, though unfortunately only a small one, where some action is possible within the bounds of our available resources and I think that it should be taken. The change will take place as from the 1st April and the loss of revenue will be Rs. 8 lakhs.

Reduction of Taxes on Income —We still have Rs. 1,42 lakhs left to dispose of and 1 propose to do this in accordance with the pledge of my predecessor in which he said. "Relied must come first in restoring the emergence cuts in pay and secondly in taking off the surcharge on the moome-tax now to be imposed."

will require consideration in view of the impending separation of Aden and Burma. Taking all these things into consideration I was draposed to think that the duty ought to be abolished at once but that would perhaps have been a little harsh to the vested interests which have

Rs. 1,000 and Rs. 2,000 would cost a turther Rs 75 lakhs (Searly with a surplus of Rs 1,42 lakhs only we cannot remove the whole of the two surcharges and the quasi-surcharge but what we can do is to reduce them by one-third and this is what I in fact propose The cost will be Rs 1,36 lakhs leaving us with a purely nominal surplus of Rs. 6 lakhs

Treatment of 1934-35 Surplus - The surplus for 1934-35 turn out to be much larger than originally budgeted, totalling Rs 389 lakhs Of this sum the Finance Member and -

"We consider that the needs of the rural areas should have the first claun on this and we have decided to set aside a sum of Rs 1.00 lakhs for distribution to the provinces to be spent on schemes for the economic development and improvement of such areas

Schemes have been examined and worked out but unfortunately many of them are still merely paper schemes, to even before the financial stringency of recent years some Local Governments could only devote very madequate funds to those purposes and in the recent years of crisis and retreuchment it has been impossible for any Local Government to find money for new projects however likely they were to contribute to the prosperity of the province.

I have used the expression economic development and improvement of rural areas and I have indicated that I use that expression in a wide sense to cover any measure which will conduce to the amelioration of the conditions of the cultivators and (ma) classes. One such measure is the Co-operative Movement and we have for the last 7 or 8 months had an expert on duty under the Central Government to examine how the movement stands. Mr Darling who has acquired great experience of the movement in the Punjab has been touring round the provinces discussing the question with Local Governments and Provincial Registrats. We propose to earmark a sum of Rs 10 to 15 lakhs out of the erore which , have mentioned and this, we hope, will enable governments to develop the movement on sound financial foundations novement on somm manual foundations.

Details of the measures and the conditions on which the grants will be given will be settled after we have considered Mr. Darling's Report.

As regards the remaining Rs 85 to Rs, 90 lakhs I do not propose at present to define very closely the terms on which it will be distributed to the Provinces or the purposes for which it will be used I may, however, say that we shall pro-bably adopt the basis of rural population for distribution and we shall certainly impose the two following conditions -

- (1) that the grant should be spent on schemes approved by the Government of India which will improve the economic position of the people, and
- (2) that it will be devoted only to schemes which the Local Government would not otherwise have been able to undertake in the immediate future.

while the removal of the tax on incomes between | Fund. There is obviously great scope for expenditure on road development, and I am very glad to be in a position to supplement the somewhat evignous resources of the Road Development Fund reserve, which was designed. as Hon'ble Members are aware, for the purpose of making grants towards works of special Importance or to specially necessitous parts of India. The Government have drawn up a programme for the expenditure of the additional sum now available and in this prime consideration is being given to the needs of the Province of Assam, which seems to me to be about the most necessitous of all the provinces.

> North-West Frontier Roads .- A further sum of Rs. 25 lakhs we propose to set aside for schemes of development in the North-West Frontier Province Most of this will be spent on the construction of roads in the tribal area and the remainder will be devoted to schemes of economic development in that area, I wish to make it clear that we have no intention of implementing this policy by force or without the consent of the tribes in whose territory the roads will be constructed.

A petition has already been received from the Aindis asking that a road may be constructed through a small area in Tirah and it is hoped that this development may lead to a fuller recognition not only by this important tribe but also by others of how their fine interests are served by improvement of their communications with British India.

It is considered that from the point of view of Government this expenditure, which probably be spread over several years, is fully justified both on financial and political grounds. As the House is aware the relations between the Frontiertribes and Government have not always been peaceful and very large sums have been expanded from time to time upon military operations of a puintive and wholly unproductive nature. We hope that by improving communications and by assisting the tribes to become economically self-supporting we shall not only avoid the necessity for such operations in inture but shall transform in course of time a potential danger into a source of strength to

Broadcasting—The last item of special expenditure which I have to mention in this connection is a provision of Rs. 20 lakhs or the development of Broadcasting. As has already been announced, it is proposed shortly to construct a large transmitting station in Delhi. and we hope later to undertake the construction of a similar new station at Madras. The existingstations at Calcutta and Bombay are also in urgent need of improvement and extension. Broadcasting is of course an immensely impordevelopment of a country and India cannot afford to fall too far behind in this matter.

After these special grants have been made there should remain a balance of Rs. 2.04 lakhs. A large part of this sum I propose to put aside for two schemes which it was provisionally decided to finance from capital. These are the Roads—We also propose to make a special evel aviation programme, which is expected contribution of Rs. 40 lakhs to the Government to cost Rs. 93 lakhs, and the transfer of the of India's reserve in the Road Development Pusa Institute to Delhi which will cost about Rs. 36 lakhs | 1 was not myself very happy | about the decision to charge to capital these two schemes, which are certainly not in any strict sense of the word remunerative. And now that we have an accrued revenue surplus it seems to me sound policy to use part of it for Members are aware, this source of income will these purposes and to avoid the creation of what practically cease at the end of the present might have become an awkward precedent. Calendar year in accordance with the policy The remainder of the surplus amounting to which was amounted some years ago by the Rs, 75 lakhs will now go as an additional allot-flowering the receiver only the cost of opium sold to contact the results of the disposal of the sums which we expect to sumption in India have in hand on the 31st March next."

Revenue in 1935-36 —Concerning the revenue tor 1935-36 the Finance Member said .

"The total revenue, excluding Railways, may be at Rs. 90.19 lakhs or Rs. 81 lakhs less than than the revised estimate for the current year.

Customs, etc. Here I estimate for Rs 51 92 lakbs altogether or an increase of Rs 75 lakbs over the revised figures for the current year The main variations are a decline of Rs. 2 crores on the import duty on sugar combined with increases of Rs 35 lakhs on the sugar excise of Rs 65 lakhs on the match excise and of Rs, 43 lakhs on kerosene and Petrol II is of course a matter of great difficulty to traine an accurate estimate of customs, etc., revenue and a time when there are so many uncertain at a time when there are so many uncertainty angles in Rs 88.69 lakhs showing an increase of Rs 96 factors at work. This uncertainty applies in a particular measure to the sugar duties. As I have aheady stated, our estimates for the current vear have been revised to show an increase of Rs 1,70 lakhs in the import duty and a decline of Rs 32 lakhs in excise—the original figures being Rs 2 05 and 1.47 laklis respectively, and the revised Rs 3,75 and 1 15 lakhs We cannot, however, anticipate that the revenue from the import duty will remain at so high a figure in 1935-36 and the increased revenue to be expected from the excise duty will by no means com-pensate for this meyitable reduction.

During the period when Indian factories were not working at their full strength, imports have been substantial, but when Indian production reaches its tull level, imports of foreign sugar for ordinary consumption will almost disappear, and there will only be certain small imports of the fluer varieties of sugar. This process may not, however, be completed during 1935-36 and the best torecast we can make is to assume an import tevenne of Rs 1,75 lakhs and an excise yield of Rs 1,50 lakhs. The increase in petrol and kerosene is due to normal growth and that in the match excise merely represents a tull instead of a part year's yield of the duty.

Income .-- During the current on year there has been an undoubted improvement in the financial posess.

In portant industries, but this improvement wind important industries, but this improvement wind important industries, but this improvement will be partially reflected in our Income-tax returns for 1935-36. I therefore estimate for an improvement of no more than Rs 51 laking again communicated to the House a warning partially fixed this Rs, 16 laking and of this Rs, 18 laking and of this Rs, 18 laking and of this Rs, 18 laking and of this Rs, 18 laking and of this Rs, 18 laking and of this Rs, 18 laking and of this Rs, 18 laking and of this Rs, 18 laking and of this Rs, 18 laking and of this Rs, 18 laking and of this Rs, 18 laking and of this Rs, 18 laking and in the financial position of some of the more account of the restoiced pay-cut. The actual secured to some extent by emergency measures figures are Rs. 17,25 lakhs for the current of a temporary character and that the figure of year and Rs. 17,76 tol 1935-36.

Opium -Our estimate under this head is Rs 61 lakhs as compared with Rs 71 lakhs for the current financial year. This is based on the assumption that only 257 chests of opinim will be exported during 1935-36. As Hou'ble

Interest —This shows a very large reduction amounting of Rs 1,29 lakbs which is of course due to the transfer of the currency innction and, therefore the reserves, of the Government of India to the Reserve Bank It is time that as against this we shall get the surplus profits of the Bank but in the first year instead of getting a full year's interest on the assets in our various reserves and balances we shall only get a part year's dividend from the profits of the Bank. We have included Rs. 50 lakhs on this account under the head. "Currency." but the receipts here still show a drop of Rs 11 lakhs owing to the lower rates prevailing for short term money

1935-36 Expenditure -- "Expenditure as a lakhs which is of course almost entirely due to the restoration of the pay ent

The cost of restoration will be Rs, 55 laklic tor the Civil Departments, excluding the Railways, but including the Posts and Telegraphs Department, and Rs. 53 lakhs for the Army, a total of Rs. 1.08 lakhs but there is, as I have said a set off against this in the torm of extra income-tay to the extent of Rs 16 lakhs,

Apart from the pay cut, there are only nunor increases, most of them on new services, e.g., the marketing scheme, grants to the handloom and sericultural industries, the new Dairy Institute and the Institute of Industrial Research. There is also a small increase on Defence and a deficit on Posts and Telegraphs which is however more than explained by the abolition of the pay cut.

Defence.—The Defence Budget shows an increase, leaving out of account the pay cut, of Rs. 7 lakhs over the original estimate for this year but the partial restoration by His Majesty's Government of the pay cuts of British soldiers which has necessarily to be applied to British soldiers on the Indian establishment, accounts for Rs 5 lakhs of this. The purely nominal increase of Rs 2 lakhs which remains conceals however a considerably increased provision for necessary services and re-equipment which had

884 Finance.

representing a new permanent level of Defence expenditure. The contingency then forescen has become a fact and new or rather postponed services amounting to Rs. 67 lakhs have had to be provided for. This sum has been found as to Rs. 20 lakhs by closer estimating for grains and other foodstuffs and as to the remainder by economics in other directions.

My predecessor also stated that His Excellency the Commander-in-Chief had undertaken that he would not relax his search for further economies and 4 think it will be agreed that the figures 4 have given demonstrate that this undertaking has been amply fulfilled

Hononrable Members will remember that I said we now expected a surplus on the Posts and Telegraphs accounts or 1934-35 amounting to Rs. 14 lakhs but that this result, was only achieved in consequence of a raid of about Rs 27 lakhs on the Depreciation Fund At the time of this raid my predecessor explained that this could not be repeated in toto but that the whole question of the amount of the annual contribution to the Fund was under review The final results of this review are not yet available but it is clear that the amount to be provided need not be so high as under the old rules by something like Rs 10 lakhs. There is here therefore a deterioration in the estimates for 1935-36 as compared with 1934-35 and it is one of Rs 19 lakhs and not one of Rs 27 lakhs When we add to this the cost of restoring the pay cut for the Posts and Telegraphs Department etz., Rs. 27 lakhs, we get an initial disadvantage of Rs 46 lakhs to be made up We are however estimating for a deficit not of Rs 32 lakhs but of Rs 13 lakhs which means that comparing like with like we teckon a net improvement of Rs 19 lakhs

Reduction of Debt —There is only one other item which I wish specifically to mention at this stage and that is the provision for the reduction and avadance of debt. As Hon'ble Members are aware, our revised estimates for 1933-34 and those for the current financial year included only Rs 3 crores tor this purpose It is of comise a matter of common knowledge that 60 per cent of the Government of India debt is attributable to the Railways and it seems to me that it would be imposing tooheavy a burden on the general Budget to revert to the Sinking Fund arrangements in force prior to 1934-35 before the Railways have resumed the practice of making a contribution to the General Revenues I therefore accept as reasonable for the time being the provision of Rs. 3 crores now prevailing but I should like to make it clear that, in my view, an increased provision for debt reduction ought to be a first charge on any contribution from the Railways in the future.

Borrowing -On this subject the Finance Member said

"We have issued two loans in India during almented the current year. The first was a re-issue of the current year. The first was a re-issue of the state of the current year. The first was a percent and the amount subscribed was approximately origing Rs. 25,13 lakhs. A few months later owing address to the continued improvement in our credit law.

we were able to issue a rupee loan at a nominal rate of 3 per cent, for the first time since 1896. The 3 per cent, bonds 1941 were issued at 99 per cent and the amount subscribed MRS, 10,67 lakhs, As a result of these new loans we have been able to repay Rs, 19,48 lakhs of 4 per cent, loan 1934-37 and Rs, 12,94 lakhs of 44 per cent, loan 1934-37 and Rs, 12,94 lakhs of statement of the new issues stand well above their original pince.

Next year we shall have to provide for the repayment of Rs. 16 crores of 6½ per cent. Treasury Bonds, 1935, and Rs. 11,4 crores of 5 per cent. Bonds 1935. We have also the option of repaying £11,9 milhons of 6 per cent. Sterling Bonds. 1935-37 and £3½ milhons of East Indian Railway 4½ per cent debenture stock 1935-55. The total amount of loans which we can repay or convert is thus approximately Rs. 48 crores. In addition to this we are, as I have just said, providing for the repayment of the Bombay Development Loan, 1935, and we expect to reduce the total amount of treasury bills outstanding by a further Rs. 3½ crores.

Allowing for a remittance of £26 million we anticipate that we could meet all these habilities without raising more than Rs. 25 crores by tresh borrowing, but of course the amount, time and manner of our borrowing will depend entirely on market conditions during the year."

Decision. The Finance Bill was subjected to a protacted debate in the Legislative Assembly. Several amendments designed to reduce the scale of taxation proposed by the Finance Member were made, and the House accepted three amendments emanating from the Congress Party. These three amendments, which together had the effect of making a cut of about four and a half crores of rupees in the Budget, sought to reduce the sait duty from Re. 1-4 to 12 amias (which would have meant a loss of three and a half crores of rupees), to exempt meomes of less than Rs. 2,000 a year from payment of meome tax (which would have cost Rs. 50 lakhs); and to lower postal rates by providing for a return to the half-anna postcard and the one aima letter (which would have cost Rs. 76 lakhs).

On Apill 5, His Excellency the Viceroy returned the Finance Bill to the Assembly with the recommendation that it should be passed in the original form. This the Assembly declined to do by rejecting the Finance Member's motion for the restoration of the salt duty to Re. 1-4, by 64 votes to 41.

The Finance Bill was thereupon certified by the President and sent to the Council of Statem its original form. Several amendments to it were to have been moved by members of that House, but when it was learned that the Viceroy had no power to accept amendments made by the Council of State in the certified Bill, the amendments were not moved although members of the Progressive Party voted against certain proposals of the Finance Bill. The Bill in its original form was then passed, and with the addition of the Viceroy's Signature, it became law.

# THE LAND REVENUE.

The principle underlying the Land Revenue system in India has operated from time immerial. It may be roughly formulated thus—the Government is the supreme landlord and she revenue derived from the land is equivalent to rent. On strictly theoretical grounds, exception may be taken to this statement of the Government before they become finally to rent. On strictly theoretical grounds, exception may be taken to this statement of the Government before they become finally to rent. On strictly theoretical grounds, exception may be taken to this statement of the Government before they become finally correct description of the relation between of the Government and the cultivator. The former gives protection and legal security. The latter pays for it according to the value of his holding. The official term for the method by which the Land Revenue is determined is "Settlement." There are two kinds of settlements in India—Permanent and Temporary. Under the former the amount of revenue has been fixed in perpetuity, and is payable by the landlord as distinguished from the actual cultivators the rent of the eighteenth century. It had the effect intended of converting a number of large revenue farmers in Bengal into landlords occupying a similar status to that of landowners in Europe. The actual cultivators became solely responsible for the payment of the revenue, the former lost the advantage of holding from the State. This system has

Elsewhere the system of Temporary Settlements is in operation. At intervals of thirty years, more or less, the land in a given district years, more or less, the land in a given district is subjected to a thorough economic survey, on the basis of the trigonometrical and topographic surveys carried out by the Survey Department of the Government of India. Each village area, wherever the Temporary Settlement is in vogue, has been carefully mapped, property-boundaries accurately delicated, and records of rights made and preserved. Under the Permanent Settlement in Bengal the occupant does not enjoy these advantages. The duty of assessing the revenue of a district is entrusted to Settlement Officers, members of the Indian Civil Service specially delegated for this work. The duties of a Settlement of the instructive in the vicinity, such as canals and railways, or from a general enhancement of values. But the vicinity, such as canals and railways, or from a general enhancement of values. But the vicinity, such as canals and railways, or from a general enhancement of values. But the principle that improvements effected by private enterprise shall be exempt from assessment the vicinity, such as canals and railways, or from a general enhancement of values. But the principle that improvements effected by private enterprise shall be exempt from assessment or values. But the vicinity, such as canals and railways, or from a general enhancement of values. But the principle that improvements effected by private enterprise shall be exempt from assessment or values. and to make a record of all existing right; and responsibilities in the land. He has a staff of experienced subordinates, almost all of whom
are natives of the country, and the settlement
of the district assigned to him is a work which
according to the nature of the settlement, the formerly required several years of constant class of tenure, and the character and circumwork. The establishment of agricultural devartments and other reforms have however settlement in Bengal Government derive rather led to much simplification of the Settlement less than \$2,000,000 from a total rental estionary Proceedings, and to much greater mated at \$12,000,000. Under Temporary

became solely responsible for the payment of ernment, and those in which the land is held the revenue, the former lost the advantage of bodding from the State. This system has prevailed in Bengal since 1795 and in the greater revenue on the whole village area. This latter part of Oudh since 1859. It also obtains in certain districts of Madras.

Temporary Settlements.

Temporary Settlements. all classes of holdings is now more favourable to the cultivator than it used to be. Formerly what was believed to be a fair average sum was levied on the anticipated yield of the land

# Incidence of the Revenue.

that would be generally representative of the of his land in payment of debt. It had the dovernment's share. But one-fifth of the effect of arresting the process by which the gross produce is the extreme limit, below Punjab peasantry were becoming the economic which the incidence of the revenue charge seris of money-lenders. A good deal of legisvaries greatly. About sixteen years ago the Government of India were invited in an influentially signed memorial to fix one-afth of the has been called for more than once in Bengal gross produce as the maximum Government where under the Permanent settlement (in demand. In reply to this memorial and other the words of the Resolution quoted above, representations the Government of India "se fai from being generously treated by the (Lord Curzon being Viceroy) issued a Resolution in defence of their Land Revenue Policy, in it was stated that "under the existing practice the Government is already taking much less in revenue than it is now invited to exact" and "the average rate is everywhere on the down grade." This Resolution, together with the statements of Provincial Government and Cultivator.

While the Government thus interferes beginning that the statements of Provincial Government and Cultivator. (a) large enhancements of revenue, when they occur, to be imposed progressively and granted after proper inquiry. dually, and not per sallum; (b) greater elasticity in revenue collection, suspensions and remise and after proper inquiry. remissions being allowed according to seasonal variations and the circumstances of the people. (c) a more general resort to reduction of assessments in cases of local deterioration.

# Protection of the Tenants.

In regard to the second of the five propositions noted above, various Acts have been passed from time to time to protect the in-torests of tenants against landlords, and also torests of tenants against landlords, and also (Superintendent of Government," 1902 (Superintendent of Government Printing); to give greater security to the latter in possession of their holdings. The Oudh Tenancy India ": Sir John Strachey's India, its
Act of 1886 placed important checks on enAdministration and Progress, 1911," (Macmilhancement of rent and eviction, and in 1900 lan & Co.); M. Joseph Challley's "Adminisan Act was passed enabling a landowner to trative Problems of British India" (Macrial the whole or a portion of his estate, and million & Co. 1910) and the Annual Adminisentail the whole or a portion of his estate, and milan & Co., 1910), and the Annual Administo place it beyond the danger of alienation by tration Reports of the respective Provincial his heirs. The Punjab Land Allenatio Act, Government.

Settlements, 50 per cent. of the rental in the passed at the instance of Lord Curzon, emcase of Zemindari land may be regarded as bodied the principle that it is the duty of a virtually a maximum demand. In some parts Government which derives such considerable the impost falls as low as 35 and even 25 per proportion of its revenue from the land, to cent. and only rarely is the proportion of one interfere in the interests of the cultivating half the rental exceeded. In regard to Ryot-Classes, This Act greatly restricted the credit wari tracts it is impossible to give any figure of the cultivator by prohibiting the alienation that would be generally representative of the of his lead to prove the delt it had the lation affecting land tenure has been passed from time to time in other provinces, and it

At the same time the Government consistently pursues a generous policy. In times of dislaid down as principles for future guidance—tress, suspensions and remissions are freely

> Land revenue is now a provincial head of revenue and is not shown in the All-India accounts. It may be taken roughly at £28 million, as compared with £84 million said to have been raised annually by Aurungzebe from a much smaller Empire.

> The literature on the subject is considerable. The following should be consulted by readers who require fuller information:—"Land Revenue Policy of the Indian Government," 1902

# EXCISE.

The Exclse revenue in British India is derived from the manufacture and sale of intoxicating liquors, hemp drugs, toddy and opium. It is a common place amongst certain sections of temperance reformers to represent the traffic in intoxicating liquors as one result of British rule. There is, however, abundant evidence to show that in pre-British days the drinking of spirituous liquors was commonly practised and was a source of revenue.

The forms of intoxicating liquor chiefly consumed are country spirit; fermented palm juice; beer made from grain; country brands of rum, brandy, etc., locally manufactured malt beer and imported wine, beer and spirits. Country spirit is the main source of revenue, except in the Madras Presidency, and yields about two-thirds of the total receipts from liquors. It is usually prepared by distillation from the Mhowra flower, molasses and other forms of unrefined sugar, fermented palm juice and rice. In Madras a very large revenue is derived from fresh toddy. The British inherited from the Native Administration either an uncontrolled Out-Still System or in some cases a crude Farming System and the first steps to bring these systems under control were the limitation of the number of shops in the area farmed, and the establishment of an improved Out-Still System under which the combined right of manufacture and sale at a special shop was annually granted. This of course was a kind of control, but it only enabled Government to impose haphazard on the liquor traffic as a whole by means vend fees. It did not enable Government to graduate the taxation accurately on the still-head duty principle nor to insist upon a standard of purity or a fixed strength of liquor. Moreover for political and other reasons the extent of control could not at first be complete. There were tribes of aborigines who regarded the privilege of making their own liquor in their private homes as a long established right and who believed that liquor poured as liba-tions to their god should be such as had been made by their own hands. The introduction of any system amengst those peoples had to be worked very cautiously. Gradually as the Administration began to be consolidated the numerous native pot-stills scattered all over the country under the crude arrangements then in force began to be collected into Cen-tral Government, enclosures called Distiltral Government enclosures called Distil-leries, thus enabling Government to perfect its control by narrowing the limits of supervision; and to regularize its taxation by imposing a direct still-head duty on every gallon issued from the Distillery. Under Distillery arrangefrom the Distillery. Under Distillery arrangements it has also been possible to regulate and supervise thoroughly the manufacture of its liquor and its disposal subsequent to leaving the Distillery by means of a system of transport passes, establishment supervision, improved distribution and vend arrangements.

# Various Systems.

The Out-Still System may be taken to inspirit to all country spirit shops has been rationed clude all systems prior in order of development on the basis of consumption for the year 1920-21.

stated the stages of development have been-First: farms of large tracts; Second: farms of smaller areas; Third: farms of the combined right to manufacture and sell at particular places without any exclusive privilege over a definite area; Fourth: farms of similar right subject to control of means and times for dis-tilling and the like. The Provincial Governments have had to deal with the subject in different ways suited to local conditions, and so the order of development from the lower forms of systems to the higher has not been always everywhere identical in details. Yet in its essence and main features the Excise Administration in most provinces of British India has progressed on uniform lines the keynote lying in attempts, where it has not been possible to work with the fixed duty system in its simplest forms, to combine the farming and fixed duty systems with the object of securing that every gallon of spirit should bear a certain amount of taxation. The Out-Still System has in its turn been superseded by either the Free-supply system or the District Monopoly system. The Free-supply system is one of free competition among the licensed distil-lers in respect of manufacture. The right of vend is separately disposed of. The District monopoly system on the other hand is one in which the combined monopoly of manufac-ture and sale in a district is leased to a farmer subject to a certain amount of minimum stillhead duty revenue in the monopoly area being guaranteed to the State during the term of the lease.

### Reforms

The recommendations of the Indian Excise Committee of 1905-06 resulted in numerous reforms in British India, one of them being that the various systems have been or are gradually being superseded by the Contract Distillery System under which the manufacture of spirit for supply to a district is disposed of by tender, the rate of still-head duty and the supply price to be charged are fixed in the contract and the right of vend is separately disposed of. This is the system that now prevails over the greater portion of British India. The other significant reforms have been the revision of the Provincial Excise Laws and Regulations, and the conditions of manufacture, vend, storage and transport, an improvement in the quality of the spirit, an improved system of disposal of vend licenses, reductions and re-distributions of shops under the guidance and control of Local Advisory Committees and gradual enhancement of taxation with a view to checking consumption.

Excise has now been made over entirely to the Provincial Governments, and the duties vary from province to province. The governing principle in fixing these rates is the highest duty compatible with the prevention of illicit his tillation. In the Bombay Presidency the issue of spirit to all country spirit shops has been rationed on the basis of consumation for the year 1920-21. Salt. 8gI

From that consumption reduced to proof gallons. 10 per cent. is deducted in the case of shops in Bombay City and 5 per cent. elsewhere and the ration is then fixed for each shop according to the issues in the corresponding month of 1920-21. This is the most important step taken by the new Government to reduce consumption. Two large distilleries in the Presidency have been placed entirely under Government management. thus partially superseding the Contract Distilling system.

Sap of the date, palmyra, and cocoanut palms called toddy, is used as a drink either fresh or after fermentation. In Madras and Bombay the revenue is obtained from a fixed fee on every tree from which it is intended to draw the liquor and from shop license fees. In Bengal and Burma the sale of shop licenses is the sole form of taxation. Country brands of rum, and so-called brandies and whiskies, are distilled from grape juice, etc. The manufacture is carried out in juice, etc. The manufacture is carried out in private distilleries in various parts of India. A number of breweries has been established, mostly in the hills, for the manufacture of a light beer for European and Eurasian consumption.

Foreign liquor is subject to an import duty at the tariff rates, which are set out in the Customs Tariff (q.v.). It can only be sold under a license.

Since the war Brandy and Whisky have been manufactured in considerable quantities at Baroda.

The base used is the Mhowra flower. It is drunk in big towns as a substitute for German spirit, and is excised at tariff rates.

Drugs.—The narcotic products of the hemp plant consumed in India fall under three main categories, namely, ganja or the dry flowering tops of the cultivated female hemp plant charas, or the resinous matter which forms an active drug when collected separately; and bhang, or the dried leaves of the hemp plant whether male or female cultivated or unculti- Province to Province.

vated. The main features of the existing system are restricted cultivation under supervision, storage in Bonded Warehouses, payment of a quantitative duty before issue, retail sale under licenses and restriction on private possession. Licenses to retail all forms of hemp drugs are usually sold by auction. The sale of charas has been prohibited in the Bombay Presidency except Sindh from the 1st April 1922.

Opium.-Opium is consumed in all provinces in India. The drug is commonly taken in the form of pills; but in some places, chiefly on social and ceremonial occasions, it is drunk dissolved in water. Opium smoking also prevails in the City of Bombay and other large towns. The general practice is to sell opium from the Government Treasury, or a Central Warehouse, to licensed vendors. The right of retail to the public is sold by annual auction to one or several sanctioned shops. Further legislation against opium smoking in clubs and dens is now under contemplation.

The revenue from opium is derived mainly from exports of what is called provision opium to foreign countries and from the sale to Provincial Governments of excise opium for internal consumption in India. The entire quantity is now exported under the system of direct sales to Foreign and Colonial governments, the system of auction sales in Calcutta to traders for export to foreign countries having been stopped with effect from 7th April, 1926. In no case are exports permitted without an import certificate by the Government of the country of import as prescribed by the League of Nations.

It has been decided to reduce the total of the opium exported since the calendar year 1926 by 10 per cent annually in each subsequent year until exports are totally extinguished at the end of 1935.

Excise opium is sold to Provincial Governments for internal consumption in India at a fixed price based on the cost of production. This orium is retailed to licensed vendors at rates fixed by the Provincial Governments and varying from

## SALT.

The salt revenue was inherited by the British and evaporated by solar heat. In the Rann Government from Native rule, together with a of Cutch the brine is also evaporated by solar measures of Cutch the brine is also evaporated by solar heat. In the Rann Government from Native rule, together with a of Cutch the brine is also evaporated by solar heat. In the Rann Government from the Sant from the Sant range and the product is known as Baragara were abolished and the salt duty consolidated raised. There are four great sources of the salt product sold condensed on the Punjab; brine salt brine for Sambhar Lake in Rajputana, salt brine porated by solar heat. In the Rann Government for the manufacture of the salt great sources of the salt were opened in Dirangalhra State in 1923. In Bombay and Madras sea water is let into shallow pans on the sea-coast and evaporated by solar heat. # INCOME TAX.

The income tax was first imposed in 2,000 rupees at the rate of four pies in the rupee India in 1860, in order to meet the financial or about 5d, in the pound. In March 1903 dislocation caused by the Mutiny. It was the minimum taxable income was raised from levied at the rate of four per cent, or a 500 to 1,000 rupees. The income-tax schedule little more than 9½d. In the pound on all incomes was completely revised, raised, and graduated of five hundred rupees and upwards. Many in the Budget of 1916-17 in the general scale of changes have from time to time been made in increased taxation imposed to meet the deficit the system, and the present schedule was con-solidated in the Act of 1886. This imposed a tax on all lucomes derived from sources other nuous and in every financial difficulty the authorthan agriculture which were exempted. On ities turn to the Income Tax as a means of incomes of 2,000 rupees and upwards it fell raising fresh revenue. The last revision was at the rate of five pies in the rupee, or about in the Supplementary Finance Bill of 1931, 6id. in the pound; on incomes between 500 and when the scale was fixed as follows --

The head of the Income-Tax Department of a province is the Commissioner of Income-tax who is appointed by the Governor-General in Council. The rest of the income-tax staff in a province are subordinate to him and they are appointed and dismissed by him. His power of appointment and dismissal is, under section 5 (4) "subject to the control of the Governor-General in Council," but the Governor-General in Council exercises this control through the local Government.

The estimated yield of Income-tax in 1934-35 is Rs. 16,40 lakhs.

# HISTORY OF THE COINAGE.

The indian mints were closed to the un-Reserve. In that and the following month a restricted coinage of silver for the public from crore of rupees was coined and over 17 crores of the 26th June 1893, and Act VIII of 1893, passed rupees in the year ending the 31st March 1910 on that date, repealed Sections 19 to 26 of the including the rupees issued in connection with Indian Coinage Act of 1879, which provided for the conversion of the currencies of Native the coinage at the mints for the public of gold States. From the profit accruing to Governand silver coins of the Government of India, ment on the coinage it was decided to constitute After 1893 no Government rupees were coined a separate fund called the Gold Reserve Fund until 1897, when, under arrangements made with as the most effective guarantee against tempothe Native States of Bhopal and Kashmir, the rary fluctuations of exchange. The whole currency of those States was replaced by Gov-profit was invested in sterling securities, the ernment rupees. The re-coinage of these interest from which was added to the fund. In ernment rupees. The re-colnage of these interest from which was added to the rund. In rupees proceeded through the two years 1897 1906 exchange had been practically stable for and 1898. In 1899 there was no coinage of eight years, and it was decided that of the rupees; but in the following year it seemed that coinage profits devoted to this fund, six crores coinage was necessary, and it was begun in should be kept in rupees in India, instead of February 1900, the Government purchasing the being invested in gold securities. The Gold silver required, and paying for it mainly with Keserve Fund was then named the Gold Stanthe gold accumulated in the Paper Currency dard Reserve. It was ordered in 1907 that only one-half of the coinage profits should be paid into the reserve, the remainder being used for capital expenditure on railways.

### Gold.

Since 1870 there had been no coinage of double mohurs in India and the last coinage of single mohurs before 1918 in which year coinage was resumed, was in the year 1891-92.

A Royal proclamation was issued in 1918 establishing a branch of the Royal Mint at Bombay. It stated:—Subject to the provision of this proclamation the Bombay Branch Mint shall for the purpose of the coinage of gold coins be deemed to be part of the Mint, and accordingly, (a) the Deputy Master of the Bombay Branch Mint shall comply with all directions he may receive from the Master of the Mint whether as regards the expenditure to be in-curred or the returns to be made or the transmission of specimen coins to England or otherwise and (b) the said specimen coins shall be subject to the trial of the pyx under section 12 of the Coinage Act, 1870, so that they shall be examined separately from the coins coined in England or at any other branch of the Mint, and c) the Deputy Master of the Bombay Branch Mint and other officers and persons employed for the purpose of carrying on the business of the Branch Mint may be appointed, promoted, suspended and removed and their duties assigned and salaries awarded and in accordance with the provisions of section 15 of the Coinage Act, 1870. Pending the completion of the arrangements at the Branch, Royal Mint, power was taken by legislation to coin in India gold was valued by legislation to and fineness as the modurs of the same weight and fineness as the sovereign. Altogether 2,109,703 pieces of these new cons of the normal value of Rs. 3,16,45,545, were struck at the Bombay Mint. The actual were struck at the Bombay Mint. The actual coinage of sovereigns was begun in August, 1918, and 1,295,372 sovereigns were coined during the year. This branch of the Royal Mint was closed in April, 1919, owing to difficulties in supplying the necessary staff.

The Indian Currency Act of 1927 established a new ratio of the rupee to gold. It established this ratio at one shilling and six pence by enacting that Government would purchase gold at a price of twenty-one rupees three annas ten pies per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling, for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling and five pence forty-nine sixty-fourths was notified as Government's selling rate for sterling to meet these obligations. Great Britain and India left the gold standard in September 1931 but the buying and selling rates for sterling are still maintained.

With the receipt of large consignments of gold, the Bombay Mint made special arrangements for the refining of gold by the chlorine process and at the end of the year 1910-20 the Refinery Department was capable of refining a daily amount of 6,000 ounces of raw gold.

# Silver.

The weight and fineness of the silver coins

-		Fine Silver grains.	ALLOY grains.	Total grains.
Rupee		165 821	15 71	180 90
anna piece Eighth of a rupee o		411	3₹	45
2-anna piece .	-	20	12	221

One rupee = 165 grains of fine silver. One shilling = 80,1 grains of fine silver. One rupee = shillings 2.0439.

# Copper and Bronze.

Copper coinage was introduced into the Bengal Presidency by Act XVII of 1835 and into the Madras and Bombay Presidencies by Act XXII of 1844.

The weight of the copper coins struck under Act XXIII of 1870 remained the same as it was an 1835. It was as follows:

111 1000. 10 was as 10110ws :	G	rains troy.
Double pice or half-anna		200
Pice or quarter-anna	••	100
Half-pice or one-eighth of an anna		50
Pie being one-third of a pice or twelfth of an anna	one-	331

The weight and dimensions of bronze coins are as follows:-

are as follo	ws:		Standard weight in grains troy.	Diameter in milli- metres.
Pice		• ,	75	25.4
Half-pice			371	21 .12
Pie	••		25	17.45

# Nickel.

The Act of 1906 also provides for the coinage of a nickel coin. It was directed that the nickel one-anna piece should thenceforth be coined at the Mint and Issued. The notification also prescribed the design of the coin, which has a waved edge with twelve scollops, the greatest diameter of the coin being 21 millimetres and its least diameter 19 8 millimetres. The desirability of issuing a half-anna nickel coin was considered by the Government of India in 1909 but after consultation with Local Governments it was decided not to take action in this direction until the present one-anna coin. The two-anna nickel coin was introduced in 1917-18; and the four-anna and eight-anna nickel coins in 1919. The eight-anna nickel is now being withdrawn from circulation.

# The Currency System.

The working of the Indian currency system much importance, and they continue to bulk which has commanded a large amount of public so largely in all Indian economic questions, than attention since 1893, was forced to the front in 1920, as the result of measures taken to stabilise the exchange value of the rupce after the fluc- Indian tuations caused by the war. These assumed so guage.

we propose to give here a short summary of the Indian currency system in non-technical lan-

# I. THE SILVER STANDARD.

Prior to 1893 the Indian currency system was a mono-metallic system, with silver as the standard of value and a circulation of silver rupees and notes based thereon. But with the opening of new and very productive silver mines in the United States of America the supply of silver exceeded the demand and it steadily receded in value. The result was that the gold value of the rupee, which was nominally two shillings, fell continuously until it reached the neighbourhood of a shilling. These disturbances were prejudicial to trade, but they were still more prejudicial to the finances of the Government. The Government of India has to meet every year in London a substantial sum in the form of payment of interest on the debt, the salaries of officials on leave, the pensions of retired officials, as well as large payment for stores required for State enterprises. As the rupee fell in its gold value the number of rupees required to satisfy these pay-ments rose. The total reached a pitch which seriously alarmed the Government, which felt that it nuglet be called upon to raise a sum in rupees which would necessitate a considerable mercase in taxation, which should be avoided if possible. It was therefore decided to take rupee for the purposes of exchange.

Closing the Mints .-- The whole question was examined by a strong committee under the presidency of Lord Herschell, whose report is commonly called the Herschell Report. It was decided in 1893 to close the mints to the unrestricted coinage of silver. This step led, as was intended, to a gradual divergence between the exchange value of the rupee and the gold value of its silver content. Government ceased to add rupees to the circulation. Rupees remained unlimited legal tender and formed standard of value for all internal transactions. Since Government refused, and no one else had the power to coin rupees, as soon as circumstances led to an increase demand for rupees, the exchange value of the rupee began to rise. 1898 it had approached the figure of one shilling and four pence. Meantime, in response to the undertaking of Government to give notes or rupees for gold at the rate of fifteen rupees to the pound sterling, gold began to accumulate in the Paper Currency Reserve. These purposes having been attained, a second committee was appointed under the chairmanship of Sir Henry Fowler to consider what further steps should be adopted in the light of these conditions. The report of measures to raise and fix the gold value of the the Fowler Committee as it was called marked the second stage in Indian currency policy.

### II. THE NEW STANDARD.

The Fowler Committee rejected the proposal to re-open the Mints to the free coinage of silver. They proposed that the exchange value of the rupee should be fixed at one shilling and fourpence, or fifteen rupees to the sovereign. They further suggested that the British sovereign should be made a legal tender and a current coin in India: that the Indian mints should be thrown open to the unrestricted coinage of gold; so that the rupee and the sovereign should freely circulate side by side in India. The goal which supported by a gold currency. Now under the condition which compelled the Government of India to give either rupees or rupee notes for gold tendered in India, at the rate of fifteen rupees to the sovereign, it was impossible for the rate of exchange to rise above one shilling and four pence, save by the fraction which covered the cost of shipping gold to India. But if the balance of trade turned against India, it was still possible for the rate of exchange to fall. meet this the Fowler Committee recommended that the profits on coining rupees should not be absorbed in the general revenues, but should be set aside in a special reserve, to be called the Gold Standard Reserve. Inasmuch as the cost of coining rupees was approximately elevenpence halfpenny, and they were sold to the public at

one and four pence, the profits were considerable; they were to have been kept in gold, so as to be freely available when required for the support of exchange.

A 16 pence Rupee.—The Government of India professed to accept all the recommendations of the Fowler Committee; actually only a portion of them was put in practice. The official rate of exchange was fixed at one and fourpence. The sovereign and the half sovereign were declared unlimited legal tender in India. But after a first attempt, when sovereigns soon came back to the treasuries, no effort was made to support the gold standard by an active gold currency. The gold mint was not set up. The Gold Standard Reserve was established, but, instead of holding the Reserve in gold, it was invested in British securities. These practices gave rise to conditions which were never contemplated by the Fowler Committee. Reference has been made to the Home Charges of the Government of India, which at the time amounted to about seventeen millions sterling a year. These are met by the sale of what are called Council Bills. That is to say, the Secretary of State, acting on behalf of the Government of India, sold Bills against gold deposited in the Bank of England in London. These Bills when presented in India were cashed at the Government Treasuries. Now if the Secretary of State sold Council Bills only to meet his actual requirements, it follows that the balance of trade in favour of India over and above this figure would be liquidated, as it is in other countries, by the importation of bullion or by the creation of credits. It is a fact that owing to the failure of the policy of encouraging an active gold circulation to support the gold standard, gold tended to accumulate in India in embarrassing quantities. In 1904 therefore the Secretary of State declared his intention of selling Council Bills on India without limit at the price of one shilling fourpence one-eighth—that is to say gold import point. The effect of this policy was to limit the import of gold to India, for it was generally more convenient to deposit the gold in London and to obtain Council Bills against it. than to ship the gold to India. Nevertheless as the Egyptian cotton crop was very largely financed in sovereigns it was sometimes cheaper and more convenient to ship sovereigns from Egypt, or even from Australia, than to buy Council Bills. Considerable quantities of country Dills. Consideration quantities of sovereigns found their way into India and circulated freely, particularly in the Bombay Presidency, the Punjab and parts of the Central Provinces.

Sterling Remittance.—This system worked until 1907-08. A partial failure of the rains in India in 1907, and the general financial stringency all over the world which followed the American financial crisis in the autumn, caused the Indian exchange to become weak in November. This was one of the occasions contemplated, in a different form, by the Fowler Committee when it proposed the formation of the Gold Standard Reserve. There had been very heavy coining of rupees in India and the amount in the Reserve was ample. But the Reserve was in securities not in gold, and was therefore not in a

liquid form, nor was the time an opportune one for the realisation of securities. Moreover the authorities did not realise that a reserve is for use in times of emergency. It had been assumed that in times of weakness it would be sufficient for the Secretary of State to stop selling Council Bills, and it would firm up ; meantime he would finance himself by drawing on the tunds in the Gold Standard Reserve. But it was apparent that the stoppage of the sales of Councils was not enough; there was an insistent demand for the export of gold, or the equivalent of gold. The Government of India refused and exchange fell to one and threepence twenty-three thirtyseconds. Ultimately the authorities had to give way. It was decided to sell in India a certain quantity of sterling bills on London at one and threepence twenty-nine thirty seconds, representing gold export point, and the equivalent of the export of gold. These were met in London from the funds in the Gold Standard Reserve. Bills to the extent of between eight and nine millions sterling were sold, which regularised the position and the Indian export trade recovered. Thus were gradually evolved the main principles of the Indian currency system. It consisted of silver rupees and rupee notes in India, with the sovereign and half sovereign unlimited legal tender at the rate of fifteen rupees to the sovereign, or one and fourpence. The rate of exchange was prevented from rising above gold exchange was prevented from rising above gold import point by the unlimited sale of Council Bills at gold point in London; it was prevented from falling below gold point by the sale of Sterling Bills (co.amonly called Reverse Councils) at gold export point in India. But it was not the system proposed by the Fowler Committee, for there was no gold mint and only a limited gold circulation; some people invented for it the novel term of the gold invented for it the novel term of the gold exchange standard, a term unknown to the law of India. It was described by one of the most active workers in it as a "limping standard."

# III. THE CHAMBERLAIN COMMITTEE.

This brings us to the year 1913. There were many critics of the system. Some hankered for a return to the open mints; others objected to the practice of unlimited sales of Council Bills as forcing rupees into circulation in excess of the requirements of the country. But the general advantages of a fixed exchange were so great as to smother the voices of the critics, and the trade and commerce of the country adjusted itself to the one and fourpenny rupee. But there gradually grew up a formidable body of criticism directed against the administrative measures taken by the India Office. These criticisms were chiefly directed at the investment of the Gold Standard Reserve in securities instead of keeping it in gold in India; at a raid on that reserve in order temporarily to relieve the Government of the difficulty of financing its railway expenditure; at the transfer of a solid block of the Paper Currency Reserve from India to London; at the holding of a portion of the Gold Standard Reserve in silver in order to facilitate the coining of rupees; and at the unlimited sales of Council Bills at rates which prevented the free flow of gold to India, thus forcing token rupees into circulation in quantities in excess of the require-

ments of the country. The cumulative effect of this policy was to transfer from India to London an immense block of India's resources, aggregating over seventy millions, where they were lent out at low rates of interest to the London bankers, whilst India was starved of money until at one point money was not available for loans even against Government securities and the bank rate was artificially high. All these things were done, it was contended, on the obter dicts of a small Finance Committee of the India Office, from which all Indian influence was excluded, and on which London banking influence was supreme. The India Office for long ignored this criticism, until it was summarised in a series of articles in The Times, and public opinion was focussed on the discussion through the action of the India Office in purchasing a big block of silver for coining purposes from Messrs. Montagu & Co., instead of through their recognised and constituted agents, the Bank of England. The Government could no longer afford to stand aloof and yet another Currency Committee was appointed under the chairmanship of Mr. Austen Chamberlain. This is known as the Chamberlain Committee.

New Measures.—The conclusions of this Commission were that it was unnecessary to support the Gold Standard by a gold currency; that it was not to the advantage of India to encourage the internal use of gold as currency; that the internal currency should be supported by a thoroughly adequate reserve of gold and sterling; that no limit should be fixed to the amount of the Gold Standard Reserve, one-half of which should be held in gold; that the silved branch of the Gold Standard Reserve should be abolished; that Reverse Councils should be sold on demand; that the Paper Currency should be made more elastic; and that there should be two Indian representatives out of three on the Finance Committee of the India Office. The Com-

mittee dealt in conclusively with the accumulation of excessive balances in London, the general tenor of their recommendations being "not guilty, but do not do it again." They gave a passing commendation to the idea of a state Bank. Sir James Begble, the only Indian banker on the Committee, appended a vigorous minute of dissent, in which he urged that the true line of advance was to discourage the extension of the token currency by providing further facilities for the distribution of gold when increases to the currency became necessary, including the Issue of an Indian gold coin of a more convenient denomination than the sovereign or the half sovereign.

# IV. CURRENCY AND THE WAR.

The report was in the hands of the Government of India shortly before the outbreak of the war. Some immediate steps were taken, like the abolition of the silver branch of the Gold Standard Reserve, but before the Government could deal entirely with the temporising recommendations of the Commission, the war broke out. The early effects of the war were precisely those anticipated. There was a demand for sterling remittance which was met by the sale of Reverse Councils, 68,707,000, being sold up to the end of January 1915. There were withdrawals from the Post office Savings Banks, and a net sum of Rs. 8 crores was taken away. There was some lack of confidence in the Note issue, and a demand for gold; Notes to the extent of Rs. 10 crores were presented for encashment and the Government were obliged to suspend the issue of gold. But these were transient features and did not demand a moratorium; confidence was soon revived and Exchange and the Note issue con-tinued strong. The difficulties which afterwards arose were from causes completely unanticipated by all students of the Indian currency. They arose from an immense balance of trade in favour of India, caused by the demand for Indian produce for the United Kingdom and the Allies and the decline in the export trade and a nucle decime in the export trade from these countries; a heavy expenditure in India on behalf of the British Government; and a phenomenal rise in the price of silver. If we take the three years 1916-17 to 1918-19 the balance of trade in favour of India was £6 millions a year above the corresponding years of the previous quinquennium. The disburseof the previous quinquennium. ments in India on behalf of the Government of the United Kingdom and the Allies were by December 1919 £240,000,000. This balance of trade and expenditure for Imperial purposes could not be financed either by the import of the precious metals, owing to the universal embargo on the movement of gold and silver nor by credits in India. It could be financed only by the expansion of the Note issue, against sterling securities in the United Kingdom, chiefly Treasury Bills, and the issue of coined

rupees. But simultaneously there was a reduction in the output of the silver mines of the world coinciding with an increased demand for the metal. The price of silver in 1915 was 27½ pence per standard ounce. In May 1919 it was 58 pence, on the 17th December of that year it was 78 pence. The main difficulties in India were not therefore the prevention of the rupee from failing below the ratio of 15 to one, but to keep it within any limits and to provide a sufficiency to meet the demand.

Rise in Exchange.—The measures adopted by the Government of India in these emergencies were to bring exchange under rigid control, confining remittance to the finance of articles of rational importance. The next step was to raise the rate for the sale of Council Bills, so that silver might be purchased at a price which would allow rupees to be coined without loss. The following table shows how rates were raised from one shilling fourpence to two shillings fourpence:—

_	for Immediate Telegraphic Transfers.
	1 41
	1 5
	1 6
	1 8
	1 10
	2 0
	2 2
	2 4

# V. THE 1919 COMMITTEE.

The effect of these measures however was to fettison the currency policy pursued from 1893 to 1915, the main object of which was to stabilise the rupee at one and fourpence. The war being over, a Committee was appointed to advise in regard to the future of Indian exchange and

currency. It sat in 1919 and reported towards the end of the year. Its main recommendations are summarised below:—

(i) It is desirable to restore stability to the rupes and to re-establish the automatic working of the Indian currency system.

(ii) The reduction of the fineness or weight of the rupee, the issue of 2 or 3-rupee coins of lower proportional silver content than the present rupce, or the issue of a nickel rupee, are expedients that cannot be recommended.

(iii) The maintenance of the convertibility of the note issue is essential, and proposals that do not adequately protect the Indian paper currency from the risk of becoming inconverti-

ble cannot be entertained.

(ir) The rise in exchange, in so far as it has checked and mitigated the rise in Indian prices, has been to the advantage of the country as a whole, and it is desirable to secure the continuance of this benefit.

Indian trade is not likely to suffer any permanent injury from the fixing of exchange at

a high level.

If, contrary to expectation, a great and rapid fall in world prices were to take place, and if the costs of production in India fall to adjust them-selves with equal rapidity to the lower level of prices, then it might be necessary to consider the problem afresh.

(ri) The development of Indian industry would not be seriously hampered by a high rate

of exchange.

(vii) The gain to India of a high rate of exchange for meeting the Home charges is an incidental advantage that must be taken into consideration.

(viii) To postpone fixing a stable rate of exchange would be open to serious criticism and entail prolongation of Government control.

The balance of advantage is decidedly on the side of flxing the exchange value of the rupee in terms of gold rather than in terms of

sterling. (x) The stable relation to be established between the rupee and gold should be at the rate of Rs. 10 to one sovereign, or, in other words at the rate of one rupee for 11.30,016 grains of fine gold, both for foreign exchange and for

internal circulation.

(xi) If silver rises for more than a brief period above the parity of 2s. (gold), the situation should be met by all other available means rather than by impairing the convertibility of the note issue. Such measures might be (a) reduction of sale of Council Bills; (b) abstention from purchase of silver; (c) use of gold to meet demands for metallic currency. If it should be absolutely necescary to purchase silver, the Government should be prepared to purchase even at a price such that rupees would be coined at a loss.

(xii) Council Drafts are primarily sold not for the convenience of trade but to provide for the Home charges in the wider sense of the term. There is no obligation to sell drafts to meet all trade demands; but, if without inconvenience or with advantage the Secretary of State is in a position to sell drafts in excess of his immediate needs, when a trade demand for them exists, there is no objection to his doing so, subject to due regard being paid to the principles governing the location of the reserves.

Council Drafts should be sold as now by open tender at competitive rates, a minimum rate being fixed from time to time on the basis of the sterling cost of shipping gold to India. At present this rate will vary, but when sterling is again equivalent to gold, it will remain uniform.

The Government of Indiashould be authorised to announce, without previous reference to the Secretary of State on each occasion, their readiness to sell weekly a stated amount of Reverse Councils (including telegraphic transfers) during periods of exchange weakness at a price based on he cost of shipping gold from India to the United Kingdom.

(xiii) The import and export of gold to and from India should be free from Government control.

(xiv) The statutory minimum for the metallic portion of the Paper Currency Reserve should be 40 per cent. of the gross circulation.

As regards the fiduciary portion of the reserve, the holding of securities issued by the Government of India should be limited to 20 crores. The balance should be held in securities of other Governments comprised within the British Empire, and of the amount so held not more than 10 crores should have more than one year's maturity and all should be redeemable at a fixed date. The balance of the invested portion above these 30 crores should be held in short-dated securities, with not more than one year's maturity, issued by Government within the British Empire.

The sterling investments and gold in the Paper Currency Reserve should be revalued at 2s. to the rupee. The depreciation which will result from this revaluation, cannot be made good at once, but any savings resulting from the rise in exchange will afford a suitable means of discharging this liability in a limited number of years.

(xv) With a view to meeting the seasonal demand for addition. I currency, provision should be made for the issue of notes up to five crores over and above the normal fiduciary issue as loans to the Presidency Banks on the security of export bills of exchange.

Minority Report .- The main object of the Committee, it will be seen, was to secure a stable rate of exchange, without impairing the convertibility of the Note issue, and without debasing the standard silver rupee in India, or substi-tuting another coin of inferior metallic content. which would be debasement in another form. In order to attain these ends it was imperative to fix a ratio for the rupee in relation to gold which would ensure that the Government was able to purchase silver for coining purposes without more than temporary loss. For reasons given in the report they fixed this point at two shillings gold: all other recommendations are subsidiary thereto. But in this they were not unanimous; an important member of the Committee, Mr. Dadiba Dalal, of Bombay, appended a minority report in which he urged the adoption of the following courses :-

- (a) The money standard in India should remain unaltered; that is, the standard of the sovereign and gold mohur with rupees related thereto at the ratio of 15 to 1.
- (b) Free and unfettered imports and exports by the public of gold bullion and gold coins.
- (c) Free and unfettered imports and exports by the public of silver bullion and silver coins.
- (d) The existing silver supees of 165 grains of fine sliver at present in circulation to continue full legal tender,

- (e) As long as the price of silver in New York is over 92 cents, Government should not manufacture silver rupees containing 165 grains fine silver.
